Decision Analysis Applied to the Field of Environmental Health Dilber Uzun Ozsahin, Berna Uzun, Tamer Sanlidag, James LaMoreaux, 2022-04-01 This book provides students and researchers with a resource that includes the current application of the multi criteria decision theory in a variety of fields including the environment health care engineering and architecture There are many critical parameters criteria that can directly or indirectly affect the consequences of various decisions The application of the multi criteria decision theory focusses mainly on the use of computational methods which include multiple criteria and orders of preference for the evaluation and the selection of the best option among many alternatives based on the desired outcome The theory of multi criteria decision making MCDM is an approach that can be extremely useful for students managers engineers of manufacturing companies etc Behavioral Decision Analysis Florian M. Federspiel, Gilberto Montibeller, Matthias Seifert, 2024-05-30 This book lays out a foundation and taxonomy for Behavioral Decision Analysis featuring representative work across various domains Traditional research in the domain of Decision Analysis has focused on the design and application of logically consistent tools to support decision makers during the process of structuring problem complexity modeling uncertainty generating predictions eliciting preferences and ultimately making better decisions Two commonly held assumptions are that the decision maker's cognitive belief system is fully accessible and that this system can be understood and formalized by trained analysts However in past years an active line of research has emerged studying instances in which such assumptions may not hold This book unites this community under the common theme of Behavioral Decision Analysis The taxonomy used in this book categorizes research based on task focus prediction or decision and behavioral level individual or group Two theoretical lenses that lie at the interface between 1 normative and descriptive research and 2 normative and prescriptive research are introduced The book then proceeds to highlight representative works across the two lenses focused on individual and group level decision making Featuring

various methodologies and applications the book serves as a reference for researchers students and professionals across different disciplines with a common interest in Behavioral Decision Analysis

Generalized Concavity in Fuzzy Optimization and Decision Analysis Jaroslav Ramík, Milan Vlach, 2012-12-06 Convexity of sets in linear spaces and concavity and convexity of functions lie at the root of beautiful theoretical results that are at the same time extremely useful in the analysis and solution of optimization problems including problems of either single objective or multiple objectives Not all of these results rely necessarily on convexity and concavity some of the results can guarantee that each local optimum is also a global optimum giving these methods broader application to a wider class of problems Hence the focus of the first part of the book is concerned with several types of generalized convex sets and generalized concave functions In addition to their applicability to nonconvex optimization these convex sets and generalized concave functions are used in the book's second part where decision making and optimization problems under uncertainty are investigated Uncertainty in the problem data often cannot be avoided when dealing with practical problems Errors occur in real world data for a host of reasons However over the last thirty years the fuzzy set approach has proved to be useful in these situations It is this approach to optimization under uncertainty that is extensively used and studied in the second part of this book Typically the membership functions of fuzzy sets involved in such problems are neither concave nor convex They are however often quasiconcave or concave in some generalized sense This opens possibilities for application of results on generalized concavity to fuzzy optimization Despite this obvious relation applying the interface of these two areas has been limited to date It is hoped that the combination of ideas and results from the field of generalized concavity on the one hand and fuzzy optimization on the other hand outlined and discussed in Generalized Concavity in Fuzzy Optimization and Decision Analysis will be of interest to both communities Our aim is to broaden the classes of problems that the combination of these two areas can satisfactorily address and solve

Multicriteria and Optimization Models for Risk, Reliability, and Maintenance Decision Analysis Adiel Teixeira de Almeida, Love Ekenberg, Philip Scarf, Enrico Zio, Ming J. Zuo, 2022-06-28 This book considers a broad range of areas from decision making methods applied in the contexts of Risk Reliability and Maintenance RRM Intended primarily as an update of the 2015 book Multicriteria and Multiobjective Models for Risk Reliability and Maintenance Decision Analysis this edited work provides an integration of applied probability and decision making Within applied probability it primarily includes decision analysis and reliability theory amongst other topics closely related to risk analysis and maintenance In decision making it includes multicriteria decision making aiding MCDM A methods and optimization models Within MCDM in addition to decision analysis some of the topics related to mathematical programming areas are considered such as multiobjective linear programming multiobjective nonlinear programming game theory and negotiations and multiobjective optimization Methods related to these topics have been applied to the context of RRM In MCDA several other methods are considered such as outranking methods rough sets and

constructive approaches The book addresses an innovative treatment of decision making in RRM improving the integration of fundamental concepts from both areas of RRM and decision making This is accomplished by presenting current research developments in decision making on RRM Some pitfalls of decision models on practical applications on RRM are discussed and new approaches for overcoming those drawbacks are presented *Management Aids*, 19?? **Analysis and**

MacGregor Smith, 2012-12-06 Analysis and Modeling of Manufacturing Systems is a set of papers on some of the newest research and applications of mathematical and computational techniques to manufacturing systems and supply chains These papers deal with fundamental questions how to predict factory performance how to operate production systems and explicitly treat the stochastic nature of failures operation times demand and other important events Analysis and Modeling of Manufacturing Systems will be of interest to readers with a strong background in operations research including researchers and mathematically sophisticated practitioners Multicriteria Decision Making Timothy Havranek, Doug MacNair, 2023-06-06 Public corporations and private businesses operate in an increasingly complex uncertain and interconnected world When evaluating investment decisions business managers can no longer base their decisions primarily on expected financial return They now must now consider a host of performance value measures i e criteria pertaining to issues such as environmental and social governance sustainability and stakeholder satisfaction In addition corporate managers must ensure that their investment decisions are aligned with the company s vision mission and values in order to maintain investor confidence and protect brand image Lastly to be truly successful business managers must assess the risks associated with each performance measure and manage their impacts during project implementation This book takes a pragmatic business and economics view towards evaluating competing investment alternatives and or capital project strategies It provides a practical step by step process using a structured decision analysis framework to evaluate understand quantify and measure project investment strategies in light of multiple stakeholder objectives and success criteria This process assists in helping stakeholders internal and external achieve a shared understanding of project issues and to facilitate convergence towards a mutually acceptable solution The approach considers available choices identified uncertainties constraints necessary tradeoffs and preferences so as to identify solutions that maximize overall benefits while minimizing overall costs and risk A real world case study is presented in the early chapters and the process steps are demonstrated through application to this case study Recent advances in technology allow for investment strategies to be evaluated against multiple criteria within one integrated platform This book guides the reader in performing multi criteria decision analysis including the use of Monte Carlo simulation within an MS Excel environment using native MS Excel and as well as add in programs such Palisades Decision Tools suite Example model structures screen shots formulas and output results are provided throughout the book using an illustrative case study **Decision Behaviour, Analysis and Support** Simon French, John Maule, Nadia

Papamichail,2009-07-30 Behavioural studies have shown that while humans may be the best decision makers on the planet we are not quite as good as we think we are We are regularly subject to biases inconsistencies and irrationalities in our decision making Decision Behaviour Analysis and Support explores perspectives from many different disciplines to show how we can help decision makers to deliberate and make better decisions It considers both the use of computers and databases to support decisions as well as human aids to building analyses and some fast and frugal tricks to aid more consistent decision making In its exploration of decision support it draws together results and observations from decision theory behavioural and psychological studies artificial intelligence and information systems philosophy operational research and organisational studies This provides a valuable resource for managers with decision making responsibilities and students from a range of disciplines including management engineering and information systems
