Cases in European Competition Policy Bruce Lyons, 2009-08-27 Competition between firms is usually the most effective way of delivering economic efficiency and what consumers want However there is a balance to be struck Firms must not be over regulated and so hampered in their development of innovative products and new strategies to compete for customers Nor must they be completely free to satisfy a natural preference for monopoly which would give them higher profits and a quieter life The economic role of competition policy control of anticompetitive agreements mergers and abusive practices is to maintain this balance and an effective policy requires a nuanced understanding of the economics of industrial organization Cases in European Competition Policy demonstrates how economics is used and sometimes abused in competition cases in practical competition policy across Europe Each chapter summarizes a real case investigated by the European Commission or a national authority and provides a critique of key aspects of the economic analysis

EU Competition Law, Data Protection and Online Platforms: Data as Essential Facility Inge Graef, 2016-10-17 All are agreed that the digital economy contributes to a dynamic evolution of markets and competition Nonetheless concerns are increasingly raised about the market dominance of a few key players Because these companies hold the power to drive rivals out of business regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access data on online platforms such as search engines social networks and e commerce platforms commonly referred to as the gatekeepers of the Internet The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so called essential facilities doctrine according to which firms need access to shared knowledge in order to be able to compete A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation considering that the required information may include personal data of individuals Building on the refusal to deal concept and using a multidisciplinary approach the analysis covers such issues and topics as the following data portability interoperability data as a competitive advantage or entry barrier in digital markets market definition and dominance with respect to data disruptive versus sustaining innovation role of intellectual property regimes economic trade off in essential facilities cases relationship of competition enforcement with data protection law and data related competition concerns in merger cases The author draws on a wealth of relevant

material including EU and US decision making practice case law and policy documents as well as economic and empirical literature on the link between competition and innovation The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data In addition it makes suggestions as to how data protection interests can be integrated into competition policy An invaluable contribution to ongoing academic and policy discussions about how data related competition concerns should be addressed under competition law the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms It will be of immeasurable value to the many jurists business persons and academics concerned with this very timely subject

Technological Change and Network Effects in Growth Regimes Torsten Heinrich, 2014-06-03 In this new volume it is argued that network effects are much more common than usually assumed and that they have a profound impact on many aspects of economic systems especially technological change and economic growth The analysis and modelling of this interrelationship is the central focus of this book While there exists a vast body of literature on economic growth the theories put forward so far have had limited success in explaining observed patterns of economic growth Growth cycles in particular continue to elude standard economic models though evolutionary economics has made some progress Seeking to fill the gap Torsten Heinrich's innovative approach uses microeconomics to explain heterogeneous sectoral dynamics on the meso level and then aggregating these to observed macroeconomic growth rates In this way it is shown that an evolutionary model of technological change with network effects can explain not only commonly observed asymmetric industry structures monopolies and oligopolies but also growth cycles The book includes a comprehensive account of the most influential economic growth theories a discussion of the research on network effects as well as an introduction to the methodology the model and a case study on the recent emergence of information and communication technology This important new volume will be relevant to all those interested in theoretical economics growth theory innovation economics agent based modelling and industry dynamics

Promoting Competition in Innovation Through Merger Control in the ICT Sector Kalpana Tyagi, 2019-06-21 This book addresses the question of how competition authorities assess mergers in the Information Communication Technology ICT sector so as to promote competition in innovation A closer look at the question reveals that it is far more complex and difficult to answer for the ICT telecommunications and multi sided platform MSP economy than for more traditional sectors of the economy This has led many scholars to re think and question whether the current merger control framework is suitable for the ICT sector which is often also referred to as the new economy The book pursues an interdisciplinary approach combining insights from law economics and corporate strategy Further it has a comparative dimension as it discusses the practices of the US the EU and wherever relevant of other competition authorities from around the globe Considering that the research was conducted in the EU the practices of the European Commission remain a key aspect of the content Considering its normative dimension the book concentrates on the substantive aspects of

merger control To facilitate a better understanding of the most important points the book also offers a brief overview of the procedural aspects of merger control in the EU the US and the UK and discusses recent amendments to Austrian and German law regarding the notification threshold Given its scope the book offers an invaluable guide for competition law scholars practitioners in the field and competition authorities worldwide
