Handbook of Refractory Carbides and Nitrides Hugh O. Pierson, 1996-12-31 Refractory carbides and nitrides are useful materials with numerous industrial applications and a promising future in addition to being materials of great interest to the scientific community Although most of their applications are recent the refractory carbides and nitrides have been known for over one hundred years The industrial importance of the refractory carbides and nitrides is growing rapidly not only in the traditional and well established applications based on the strength and refractory nature of these materials such as cutting tools and abrasives but also in new and promising fields such as electronics and optoelectronics Handbook of Refractory Carbides and Nitrides Hugh O. Pierson, 1996 Refractory carbides and nitrides are useful materials with numerous industrial applications and a promising future in addition to being materials of great interest to the scientific community Although most of their applications are recent the refractory carbides and nitrides have been known for over one hundred years The industrial importance of the refractory carbides and nitrides is growing rapidly not only in the traditional and well established applications based on the strength and refractory nature of these materials such as cutting tools and abrasives but also in new and promising *Materials Science of Carbides, Nitrides and Borides* Yuri G. Gogotsi, R.A. Andrievski, 2012-12-06 A survey of current research on a wide range of carbide nitride and boride materials covering the general issues relevant to the development and characterisation of a variety of advanced materials Topics include structure and electronic properties modeling processing high temperature chemistry oxidation and corrosion mechanical behaviour manufacturing and applications The volume complements more specialised books on specific materials as well as more general texts on ceramics or hard materials presenting a survey of materials research as a key to technological development After decades of research the materials are being used in electronics wear resistant refractory and other applications but numerous new applications are possible Roughly equal numbers of papers cover theoretical and experimental research in the general field of materials science of refractory materials Audience Researchers and graduate students in materials science and engineering *Disorder and Order in Strongly Nonstoichiometric Compounds* A.I. Gusev, A.A. Rempel, A.J. Magerl, 2013-03-09 long to understand that the phenomena associated with the redistribution of interstitial atoms and structural vacancies in non stoichiometric compounds represent an excellent model of analogous phenomena arising in solid state systems with mutual substitution of components Therefore methods of analysis and description proposed and developed for nonstoichiometric compounds are applicable to a number of systems with substitutional disorder In 1980 when we embarked on this work ordering in nonstoichiometric compounds was assumed to be a rare and accidental effect which hardly deserved close attention Now many people understand that ordering represents a general regular phenomenon in all non stoichiometric compounds Ordering effects which were not even mentioned or were referred to as something insignificant and negligible just 20 years ago proved to be numerous and comparable in magnitude with the change of

properties in the whole homogeneity interval of non stoichiometric compounds Phase diagrams of binary systems of transition metals with carbon and nitrogen which remained unchanged from the time they were plotted in 1950 60s and containing one or two nonstoichiometric compounds were enriched with many ordered phases Unfortunately the accumulated experimental and theoretical knowledge has not so far been disseminated widely

Polarity-Dependent Removal Interferences in Sink EDM of Titanium Alloys Maximilian Holsten, 2018-12-31 In the design of turbomachinery components a significant effort is carried out regarding the optimization of efficiency The increase in thermal efficiency particularly involves the introduction of high performance alloys Such alloys are for example titanium alloys Sink electrical discharge machining sink EDM is a crucial manufacturing process for components due to its independence of machined material strengths however new materials require process design Hence research to understand and optimize the machining of titanium alloys is of great benefit to the industry in general A positive tool polarity is generally adopted in sink EDM to maximize material removal relative to tool wear Sink EDM of titanium alloys as Ti6Al4V is however atypical in that these materials necessitate a negative tool polarity Adding to the intrigue are gamma titanium aluminides TiAl which machine better under the conventional positive polarity Established explanatory models of sink EDM fail in resolving the removal behavior a need for fundamental research is given This thesis focuses on clarifying the phenomena behind this interesting behavior by investigating removal mechanisms over a range of relevant process conditions The polarity effect is demonstrated to arise from the polarity dependent nature and extent of titanium carbide TiC formation on the workpiece surface which significantly affects material removal mechanisms An explanatory model deduced from different experimental and numerical approaches clarifies the influence of polarity to the formation mechanism of a TiC layer With regard to monitoring of adverse layer formations the measurement of acoustic emission AE is proven an appropriate concept A correlation of the AE signal to process forces is even established which may be crucial to determine the deflection of thin electrodes in EDM Finally the knowledge acquired is applied and enhanced in comprehensive process design that also involves the machining of additively manufactured TiAl The study reveals the beneficial behavior of the fine microstructure relative to the resulting surface integrity As a result this thesis delivers a model based concept for process design with respect to the adequate choice of tool polarity during machining of titanium alloys

Stability Loss and Buckling Delamination Surkay Akbarov, 2012-08-14 This book investigates stability loss problems of the viscoelastic composite materials and structural members within the framework of the Three Dimensional Linearized Theory of Stability TDLTS The stability loss problems are considered the development of the initial infinitesimal imperfection in the structure of the material or of the structural members This development is studied within the framework of the Three Dimensional Geometrical Non Linear Theory of the Deformable Solid Body Mechanics The solution to the corresponding boundary value problems is presented in the series form in the small parameter which characterizes the degree of the initial imperfection In this way the nonlinear problems for the domains bounded by noncanonical surfaces are reduced for the same nonlinear problem for the corresponding domains bounded by canonical surfaces and the series subsequent linearized problems It is

proven that the equations and relations of these linearized problems coincide with the corresponding ones of the well known TDLTS Under concrete investigations as stability loss criterion the case is taken for the initial infinitesimal imperfection that starts to increase indefinitely Moreover it is proven that the critical parameters can be determined by the use of only the zeroth and first approximations N4-Macrocyclic Metal Complexes J.H. Zagal,Fethi Bedioui,J.P. Dodelet,2007-07-16 In response to significant developments in sensor science and technology this book offers insight into the various extended applications and developments of N4 macrocycle complexes in biomimetic electrocatalysis Chapters are devoted to the chemistry electronic and electrochemical properties of porphyrin based polymetallated supramolecular redox catalysts and their applications in analytical and photoelectrochemical molecular devices the use of porphyrins phthalocyanines and related complexes as electrocatalysts for the detection of a wide variety of environmentally polluting and biologically relevant molecules and the use of electropolymerized metalloporphyrin and metallophthalocyanine films as powerful materials for analytical tools especially for sensing biologically relevant species **Proceedings of the Scientific-Practical**
