System Identification for Structural Health Monitoring Izuru Takewaki,M. Nakamura,Mitsuru Nakamura,Shinta Yoshitomi,2012 System identification SI techniques are important in reducing gaps between the constructed structural systems and their structural design models and in health monitoring for damage detection Modal parameter SI and physical parameter SI are two major branches in SI Special character of this book

- 1 The physical parameter SI method explained in this book requires only two accelerometers for measurement of records Furthermore only a simple manipulation of Fourier transformation is required
- 2 The stiffness and damping can be identified simultaneously
- 3 The modal parameter SI can supplement or support the result by the physical parameter SI method
- 4 In place of usual low pass or high pass filter techniques a novel noise bias compensation method is explained Because the noise itself is not known in many cases the identification and elimination of noise is a tough problem
- 5 A new technique of system identification is explained in the case where an inner vibration source exists
- 6 The accuracy of the explained SI methods is examined by the actual recorded data
- 7 MATLAB codes are available This book is intended for Structural Engineers Mechanical Engineers Researchers Graduate and undergraduate students
