

Health Research: Essential Link to Equity in Development

Commission on Health Research for Development. 1990. Health Research: Essential Link to Equity in Development. New York: Oxford University Press. *The Commission on Health Research for Development, an independent international initiative, was formed in 1987 with the aim of improving the health of people in developing countries through a focus on research, in a belief in its enormous—and, in great part, neglected—power to accomplish that goal. Over 24 months, the Commission reviewed information, implemented a survey, commissioned papers and case studies, and convened regional workshops. The Commission had a multinational, multidisciplinary membership, and its work was supported by a diverse group of 16 donors from Europe, North America, Asia, and Latin America. The report has three sections. The first reviews inequities in health and argues for health as both a beneficiary of and a spur to development. The second presents survey and country study findings related to the financing, focus, location, and promotion of health research. The third presents conclusions and recommendations for action.*

OBJECTIVE

- To analyze health research as a tool for health and development, both for applying solutions already available and for generating new knowledge to tackle problems for which solutions are not yet known.

CONCLUSIONS

- There is a gross mismatch between the burden of disease, whose occurrence is overwhelmingly greater in the developing world, and investment in health research, which is overwhelmingly focused on

Global Health in Transition: A Synthesis Institute of Medicine, Board on International Health, Polly F. Harrison, John H. Bryant, 1996-10-28 For many reasons this decade is a time of rethinking many things There is the impending turn of the millenium an event packed with meaning There is recent political history which has changed the global structure of power in ways few could foresee and there is an economic fluidity worldwide that makes every day unpredictable and the future uncertain There are movements of people and surges of violence that seem unparalleled and well may be We are awash in change and people everywhere are trying to understand that and read its implications It is a time that provokes soul searching backward into the lessons and achievements of the past and forward into ways for the future to be better The fields of health and social development are no exception More specifically events and conditions in the health sector point to the need to rethink some large issues Nations everywhere are grappling with the economic and ethical dilemmas of achieving and maintaining healthy populations since these are both cause and consequence of true development Increasingly the thinking is global because there are comparisons to be learned from connections that have implications obligations to fulfill and costs that are somehow shared As part of this dynamic there has been an explosion of analytic documents published since the start of this decade that deal mainly though not exclusively with health in developing countries The purpose of Global Health in Transition is to distill the essential elements from those efforts discuss the major ideas they share and the thoughts they prompt ask what those might mean for a next agenda in global health and comment on the shifting context in which our current concepts of the ideal will prove or not prove their adequacy for the future *Diarrhoeal Diseases Research*, 1992 *The Future Population of the World* Wolfgang Lutz, 2013-11-05 The highly acclaimed The Future Population of the World contains the most authoritative assessment available of the extent to which population is likely to grow over the next 50 to 100 years The book provides a thorough analysis of all the components of population change and translates these factors into a series of projections for the population of the world's regions This revised and updated version incorporates completely new scenario projections based on updating starting values and revised assumptions plus several methodological improvements It also contains the best currently available information on global trends in AIDS mortality and the first ever fully probabilistic world population projections The projections given up to 2100 add important additional features to those of the UN and the World Bank they show the impacts of alternative assumptions for all three components mortality and

migration as well as fertility they explicitly take into account possible environmental limits to growth and for the first time they define confidence levels for global populations Combining methodological innovation with overviews of the most recent data and literature this updated edition of *The Future Population of the World* is sure to conform its reputation as the most comprehensive and essential publication in the field **Climate Change and World Food Security** Thomas E.

Downing,2013-06-29 In the last half decade since sustainable development became a serious objective what have we achieved Are livelihoods more secure Are nations wealthier and more resilient Is environmental quality being restored or maintained These are essential questions of development Their answers are many varied between communities and regions even between individuals Two years ago in the aftermath of the Earth Summit and ratification of the Framework Convention on Climate Change but before the first Conference of Parties I participated in a panel at the inaugural Oxford Environment Conference on Climate Change and World Food Security The panel vigorously reviewed issues of resilient development and food security This book is a product of the Oxford Environment Conference It takes the essential questions of sustainability as a starting point to focus on present food security and its future prospects in the face of climate change Why is this book important First I believe our goals to end hunger are under threat We know what to do in many respects but fail to generate the finances and political will to change the structures that thrive on poverty Second I believe concern about the environment has become dangerously separated from the fundamental issues of human deprivation Third I believe climate change is a serious threat and I am dismayed at the way nations dither over how to control greenhouse gas emissions and mechanisms to meet the challenge of adverse climate impacts [The Oxford Textbook of Clinical Research Ethics](#) Ezekiel J.

corrupted and distorted into a harmful practice Medical research with its power to attract money and political support and its promise of cures for a wide range of medical burdens has good and bad sides which are often indistinguishable In *What Price Better Health* Callahan teases out the distinctions and differences revealing the difficulties that result when the research imperative is suffused with excessive zeal adulterated by the profit motive or used to justify cutting moral corners Exploring the National Institutes of Health's annual budget the inflated estimates of health care cost savings that result from research the high prices charged by drug companies the use and misuse of human subjects for medical testing and the controversies surrounding human cloning and stem cell research Callahan clarifies the fine line between doing good and doing harm in the name of medical progress His work shows that medical research must be understood in light of other social and economic needs and how even the research imperative dedicated to the highest human good has its limits
