Heat How To Stop The Planet From Burning:

Heat George Monbiot, 2009-03-19 George Monbiot's *Heat How to Stop the Planet from Burning* marks an important moment in our civilization's thinking about global warming. The question is no longer whether climate change is actually happening. The question is what to do about it. Monbiot offers an ambitious and far-reaching program to cut our carbon dioxide emissions to the point where the environmental scales start tipping away from catastrophe. But not before he devotes a chapter to unmasking the vested interests that have spent fortunes funding the specious science of the climate change deniers. It now seems certain that we need a 90% cut in our emissions by 2030 to prevent runaway climate change from taking place. For the first time this book explains how the cut could be achieved without bringing industrial civilisation to an end. Combining his unique knowledge of political campaigning and environmental science, Monbiot analyses the potential of energy efficiency, renewable resources, carbon burial, nuclear power, and new transport and building systems to discover what works, what doesn't, what costs the least, and what needs to be done to make change happen. He is not afraid to attack anyone, friend or foe, whose claims are false or whose figures have been fudged. His original, sometimes shocking programme shows that we can reconcile our demands for comfort and security with the survival of the biosphere. Rigorous, passionate, and totally surprising, this book could change the world. It is possible to slow the momentum of this global crisis if we act decisively. In this riveting, fiery book, the No Logo of the environmental movement, George Monbiot shows us how. *Heat* George Monbiot, 2007 A brilliant and terrifying book that forces us to move beyond denial and into action. *Heat* George Monbiot, 2006

Rationing Earth Herb Bentz, Our economy has spiralled out of control with too much focus on the quantity of production. The way to reduce this wasteful overproduction of goods and services is to increase their quality. In this groundbreaking book, industrial designer Herb Bentz explains how to fix the economy and break the environment versus economy deadlock. Bentz tells us how the use of good design can improve the quality of what we produce and how a beneficial growth in quality can substitute for the destructive increase in quantity. Tying together many diverse aspects of the economy, economic growth, unemployment, the welfare state, and the need to ration, *Rationing Earth* provides a critical analysis and a way forward at this crucial moment. Despite high wealth in rich countries, there is still poverty and inadequate funding for social programs. This unjustified austerity has resulted in a persistence of economic insecurity, the proliferation of poor quality products, and inadequate action on environmental problems. Bentz provides an economic solution from a designer's perspective. By using elements of design thinking to achieve an overarching synthesis of the world's challenging problems, including effectiveness of government, the opposing demands of capital and labour, positive and negative effects of technology, and the absolute boundaries of a finite earth, he presents practical solutions to the conflicting needs for economic growth, full employment, and reduced consumption. In each of these areas, *Rationing Earth* addresses the toughest questions: How will we adapt to less economic growth? How do we solve unemployment? What is the proper role of government? And how can we

create an economy that effectively rations scarce resources without reducing prosperity Bentz blends an entertaining style with a concise but broad analysis that is provocative informative and pertinent to anyone interested in economic change that has a positive impact on the environment Sustainable Urban Development Reader Stephen M. Climate Change and Environmental Ethics Ved P. Nanda,2012-12-01 There is a broad consensus that climate change

presents the international community with a formidable challenge Yet progress on all fronts prevention mitigation and adaptation has been slow Ved P Nanda finds an explanation for this disparity in the sharp divide between the developed and developing countries Developing countries demand that major industrialized nations provide the necessary resources and technology to address climate change while many developed countries seek firm commitments and timetables on action from the developing countries The result is a stalemate Climate Change and Environmental Ethics contains first rate research and thinking from scholars from multiple disciplines ethics ecology philosophy economics political science history and international law What distinguishes this volume from recent work on climate change are two of its special features One is the multi disciplinary backgrounds of the scholars their stellar experiences and the wisdom with which they express not simply their philosophy and theory but also their suggestions for concrete specific action in practical terms The second is the special niche this volume fills in its overarching theme of the need for a renewed environmental ethic that can bring together these disparate but interconnected views This volume explores alternative ways of conceiving our relation to the natural world A spirit of international cooperation and collaboration is needed to meet the challenge The reader is compelled to think anew about our understanding of the scientific and technical issues as well as our values and ethical responsibilities regarding climate change

Hell and High Water Alistair McIntosh, 2012-07-30 The ecologist and author of Soil Soul makes a compelling and provocative argument for a new way of life in the face of climate change Climate change is the greatest challenge that the world has ever faced In this groundbreaking book Alastair McIntosh summarizes the science of what is happening to the planet using his home country of Scotland as a case study He then argues that the root of our climate crisis is not in our politics but in our consumerism an addictive mentality where wants have replaced needs and consumption drives our very identity In a fascinating journey through literature that speaks to climate change including the ancient Sumerian Epic of Gilgamesh Plato's myth of Atlantis and Shakespeare's Macbeth McIntosh reveals the psychohistory of modern consumerism He shows how we have fallen prey to a numbing culture of violence and the manipulation of marketing Only when we resist these vices and face reality will we discover the spiritual meaning of our troubled times Only then can magic new meaning and all that gives life start to mend a broken world What McIntosh does brilliantly here is offer an alternative deeply humanist version of green politics The Scotsman UK
