Schmid, Chi-Wah Kok, 2008 This comprehensive up to date text has balanced coverage of the science engineering and technology of manufacturing processes and operations **Intermediate Mechanics of Materials** J. R. Barber, 2010-11-02 This book covers the essential topics for a second level course in strength of materials or mechanics of materials with an emphasis on techniques that are useful for mechanical design Design typically involves an initial conceptual stage during which many options are considered At this stage quick approximate analytical methods are crucial in determining which of the initial proposals are feasible The ideal would be to get within 30% with a few lines of calculation The designer also needs to develop experience as to the kinds of features in the geometry or the loading that are most likely to lead to critical conditions With this in mind the author tries wherever possible to give a physical and even an intuitive interpretation to the problems under investigation For example students are encouraged to estimate the location of weak and strong bending axes and the resulting neutral axis of bending before performing calculations and the author discusses ways of getting good accuracy with a simple one degree of freedom Rayleigh Ritz approximation Students are also encouraged to develop a feeling for structural deformation by performing simple experiments in their outside environment such as estimating the radius to which an initially straight bar can be bent without producing permanent deformation or convincing themselves of the dramatic difference between torsional and bending stiffness for a thin walled open beam section by trying to bend and then twist a structural steel beam by hand applied loads at one end In choosing dimensions for mechanical components designers will expect to be guided by criteria of minimum weight which with

elementary calculations generally leads to a thin walled structure as an optimal solution This consideration motivates the emphasis on thin walled structures but also demands that students be introduced to the limits imposed by structural instability Emphasis is also placed on the effect of manufacturing errors on such highly designed structures for example the effect of load misalignment on a beam with a large ratio between principal stiffness and the large magnification of initial alignment or loading errors in a strut below but not too far below the buckling load Additional material can be found on [http extras springer com](http://extras.springer.com)

Fracture of Engineering Materials and Structures S.H. Teoh, K.H. Lee, 2012-12-06 Recent advances in the field of fracture of engineering materials and structures have increasingly indicated its multidisciplinary nature This area of research now involves scientists and engineers who work in materials science applied mathematics and mechanics and also computer scientists The present volume which contains the Proceedings of the Joint FEFG ICF International Conference on Fracture of Engineering Materials and Structures held in Singapore from the 6th to 8th of August 1991 is a testimony of this multidisciplinary nature This International Conference was the Second Symposium of the Far East Fracture Group FEFG and thus provided a unique opportunity for researchers and engineers in the Far East region to exchange and acquire knowledge of new advances and applications in fracture The Conference was also the Inter Quadrennial International Conference on Fracture ICF for 1991 and thus appealed to researchers in the international arena who wished to take advantage of this meeting to present their findings The Conference has brought together over 130 participants from more than 24 countries and they represented government and industrial research laboratories as well as academic institutions It has thus achieved its objective of bringing together scientists and engineers with different backgrounds and perspectives but with a common interest in new developments in the fracture of engineering materials and structures This volume contains 4 keynote papers 4 invited papers and 130 contributed papers
