cities have brought about a new science of urban climatology. An understanding of the mapping of this phenomenon is crucial for urban planners. The book brings together experts in the field of Urban Climatic Mapping to provide the state of the art understanding on how urban climatic knowledge can be made available and utilized by urban planners. The book contains the technology, methodology, and various focuses and approaches of urban climatic map making. It illustrates this understanding with examples and case studies from around the world and it explains how urban climatic information can be analysed, interpreted, and applied in urban planning. The book attempts to bridge the gap between the science of urban climatology and the practice of urban planning. It provides a useful one-stop reference for postgraduates, academics, and urban climatologists wishing to better understand the needs for urban climatic knowledge in city planning and urban planners and policy makers interested in applying the knowledge to design future sustainable cities and quality urban spaces. [A Global Mapping System for Bambara Groundnut Production](#) Sayed N. Azam-Ali, José Aguilar-Manjarrez, Mohammad

Bannayan-Avval, 2001-01-01. This report describes an approach to assess locations and areal expenses that have potential for the production of bambara groundnut (*Vigna subterranea* L. Verdc) across the world. The methodology was applied both to regions such as Africa where the crop is widely cultivated but where experimental evidence is limited and to new regions that have not previously been associated with bambara groundnut but where environmental factors are conducive for productive growth. A weather generator and a crop simulation model of bambara groundnut, BAMnut, were incorporated into a Geographical Information System (GIS) to predict for the first time bambara groundnut production for the world. BAMnut is a process-based model that uses physiological principles to describe the capture and use of environmental resources, principally solar radiation and soil moisture. This mechanistic approach allows crop growth and yield to be predicted for regions beyond those used in the development of the model or regions where bambara groundnut is currently cultivated. The preliminary identification of potentially suitable areas for production based on the agro-ecological requirements of the crop serve as a useful prelude to detailed field investigations on bambara groundnut to identify appropriate management practices and may provide a basis for a similar assessment on many other underutilized crops.  Modeling Institutional Road Map** ,2009 Digital Soil Mapping with Limited Data Alfred E. Hartemink,Alex B.

McBratney, Maria de Lourdes Mendonça-Santos, 2008-07-11 Significant technological advances have been few and far between in the past approximately one hundred years of soil survey activities. Perhaps one of the most innovative techniques in the history of soil survey was the introduction of aerial photographs as base maps for land mapping which replaced the conventional base map laboriously prepared by planimetry and alidade. Such a relatively simple idea by today's standards revolutionized soil surveys by vastly increasing the accuracy and efficiency. Yet even this innovative approach did not gain universal acceptance immediately and was hampered by a lack of aerial coverage of the world, funds to cover the costs and in some cases a reluctance by some soil mappers and cartographers to change. Digital Soil Mapping (DSM) which is already being used and tested by groups of dedicated and innovative pedologists is perhaps the next great advancement in delivering soil survey information. However like many new technologies it too has yet to gain universal acceptance and is hampered by ignorance on the part of some pedologists and other scientists. DSM is a spatial soil information system created by numerical models that account for the spatial and temporal variations of soil properties based on soil formation and related environmental variables (Lagacherie and McBratney 2007).
