Students may have heard that the word "cognitive" is related to the word "cognition," which means "to know." But what does it mean to know? In this course, we will explore the various ways in which we know the world around us. We will look at the different types of knowledge, such as factual knowledge, procedural knowledge, and tacit knowledge. We will also explore the different ways in which we acquire knowledge, such as through direct experience, indirect experience, and learning from others. Finally, we will explore the different ways in which we use knowledge, such as to solve problems, make decisions, and communicate with others.

## Mapping In The Cloud:

**Mapping in the Cloud** Michael P. Peterson, 2014-03-19 This engaging text provides a solid introduction to mapmaking in the era of cloud computing. It takes students through both the concepts and technology of modern cartography, geographic information systems, GIS, and Web-based mapping. Conceptual chapters delve into the meaning of maps and how they are developed, covering such topics as map layers, GIS tools, mobile mapping, and map animation. Methods chapters take a learn-by-doing approach to help students master application programming interfaces and build other technical skills for creating maps and making them available on the Internet. The companion website offers invaluable supplementary materials for instructors and students. Pedagogical Features: End of chapter summaries, review questions, and exercises. Extensive graphics illustrating the concepts and procedures. Downloadable PowerPoints for each chapter. Downloadable code files where applicable for the exercises.

**Mapping the Cloud** Cecilia Rikap, 2023 Here I map Big Tech clouds focusing on the making of asymmetric relations with the different type of involved organizations. Amazon, Microsoft, Google, and Alibaba are cloud hegemony that control every inch of their clouds. The cloud is the main means of adoption of digital technologies. As such, developers and other firms offering their services on Big Tech clouds accept the rules of a game predefined by those few giants. They even need to get enabling credentials offered by another type of subordinate actor: the companies offering trainings to get mandatory certificates for joining the cloud as providers. At the other end, customers transition to the cloud, often guided and hiring the services of outsourced sales forces. After presenting all these actors and their interplay, I focus on AI as a service to explain the negative effects of such a migration at the level of organizational learning and innovation. Customers' technological subordination and reduced learning by doing, using, and interacting in the cloud has triggered mitigation strategies, but only large players can afford them.

*New Research in Crime Modeling and Mapping Using Geospatial Technologies* Michael Leitner, 2025-03-10 This edited volume offers innovative research and applications in the analysis, modelling, and mapping of crime using geospatial and GeoAI technologies. This is a follow-up publication of an edited volume by the same editor with a similar title, *Crime Modeling and Mapping Using Geospatial Technologies*, published by Springer in its popular *Geotechnologies and the Environment* series in 2013. The book comprises sixteen chapters authored by some of the most esteemed researchers in the field. These chapters are organized into four sections: big data and microspaces, Part I: mobility, Part II: drugs, Part III: and additional geospatial applications, Part IV. Part I includes five chapters focusing on interactive crime mapping by using large data sets obtained from social media and analyzing these data using AI applications; a fundamental spatial problem that considers spatial properties of a crime dataset to determine an adequate areal unit size; different aspects of the influence or prediction of crime in microspaces; and the use of sampled surface pollen to model the search space for documented forensic cases. Part II has four chapters that introduce two route generation heuristics that automate the creation of hot spots, policing patrol routes, discuss how to optimize police response with two

different maximal covering location problems and examine how human mobility patterns impact crime trends and modelling Part III consists of three chapters addressing opioid overdose patterns using a spatial mixed methods approach spatial temporal changes in hot spots of drug related offences and how geospatial technology can be used to empower stakeholders to make informed policy decisions about alcohol related motor vehicle collisions Part IV comprises four diverse chapters that do not fit under a single theme The topics discussed include the impact of video surveillance on the spatial distribution of crime the identification of the location of missing persons outreach events with spatial clustering analysis methods an examination of the distribution patterns of all types of juvenile delinquency to investigate underlying factors and a review and comparison of GeoAI methods for detecting and mapping illegal logging This book would be useful to faculty students and research scholars from geography sociology criminal justice criminology forensic sciences and other related disciplines as well as to crime analysts working for law enforcement agencies at the local state or federal levels from around the world
