Marine Genetics Developments In Hydrobiology:

Marine Genetics Antonio M. Solé-Cava, Claudia A.M. Russo, John P. Thorpe, 2000-05-31 International Workshop on Marine Genetics Rio 98 Marine Genetics Antonio M. Solé-Cava, Claudia A.M. Russo, John P. Thorpe, 2013-03-09 Our current knowledge of marine organisms and the factors affecting their ecology distribution and evolution has been revolutionised by the use in the last 20 years of molecular population genetics tools This book is the result of a meeting of world leading experts in Rio de Janeiro where the state of the art of this field was reviewed Topics covered include the molecular analysis of bio invasions the recent developments in marine biotechnology the factors affecting levels of genetic variation and population structure in marine organisms and their application to conservation biology fisheries and aquaculture This is the first book dedicated to the genetic study of marine organisms It will be very useful to biology students scientists and anyone working or simply interested in areas such as marine biology zoology ecology and population and molecular genetics *Advances in Marine Biology* ,1964-01-01 *Advances in Marine Biology* **Limnology and Marine Biology in the Sudan** Henri J. Dumont, A.I. El Moghraby, L.A. Desougi, 2012-12-06 This book IS an attempt to review the state of the art in the fields of limnology and of marine biology in the Sudan The need for it became apparent while we were doing some joint field work in the Nile Valley and along the Red Sea coast We feel that several reasons justify its publication Firstly a vast amount of information is being gathered year after year by the staff of the Hydrobiological Research Unit of the University of Khartoum in conjunction with the faculties of Medicine and Agriculture of this university much of this information fails to find an outlet to the scientific literature Secondly we did not want to restrict our book to the Nile Valley The Nile is such a vital life artery to the Sudan that it has dominated limnological efforts in this country to the neglect of other geographical areas The same holds true for the field of marine biology which lags far behind despite the existence of a marine field laboratory at Suakin and a research institute at Port Sudan It is hoped that both will develop considerably in the near future Jellyfish Blooms: Causes, Consequences and Recent Advances Kylie A. Pitt, Jennifer E. Purcell, 2009-03-31 Jellyfish form spectacular population blooms and there is compelling evidence that jellyfish blooms are becoming more frequent and widespread Blooms have enormous ecological economic and social impacts For example they have been implicated in the decline of commercial fisheries they block the cooling water intakes of coastal industries and ships and reduce the amenity of coastal waters for tourists Blooms may be caused by overfishing climate change and coastal pollution which all affect coastal waters around the world *Jellyfish Blooms Causes Consequences and Recent Advances* presents reviews and original research articles written by the world's leading experts on jellyfish Topics covered include the evolution of jellyfish blooms the impacts of climate change on jellyfish populations advances in acoustic and molecular methods used to study jellyfish the role of jellyfish in food webs and nutrient cycles and the ecology of the benthic stages of the jellyfish life history This is a valuable resource for students and professional marine biologists fisheries scientists oceanographers and researchers of climate change *Advances in*

Marine Biology, 2023-11-01 Approx 300 pages Approx 300 pages *The Ecology of River Systems* Bryan R. Davies, Keith F. Walker, 2013-03-09 Our understanding of the ecology of running waters has come a long way during the past few years. From being a largely descriptive subject with a few undertones concerned with such things as fisheries pollution or control of blackflies, it has evolved into a discipline with hypotheses such as the River Continuum Concept (Vannote et al. 1980) and even a book suggesting that it offers opportunity for the testing of ecological theory (Barnes & Minshall 1983). However, perusal of the literature reveals that although some of the very early studies were concerned with large rivers, references in Hynes (1970) show the great mass of the work that has been done on running water has been on streams and small rivers, and information on larger rivers is either on such limited topics as fisheries or plankton, scattered among the journals or not available to the general limnologist. The only exceptions are a few books in this series of publications such as those on the Nile (Rz6ska 1976), the Volga (Morduckai & Boltovskoi 1979) and the Amazon (Sioli 1984) and the recent compendium by Whitton (1984) on European rivers, among which there are a few that rate as large.

Marine Biodiversity H. Queiroga, M.R. Cunha, A. Cunha, M.H. Moreira, V. Quintino, A.M. Rodrigues, J. Ser6dio, R.M. Warwick, 2007-02-03 This volume presents selected contributions given to the 38th European Marine Biology Symposium held in Aveiro, Portugal, in September 2003. Understanding the functioning of marine ecosystems is the first step towards measuring and predicting the influence of Man and to find solutions for the enormous array of problems we face today. This volume is organised according to the four subthemes of the symposium and to issues commonly perceived as relevant by scientists concerned with the study, protection and management of Marine Biodiversity: patterns and processes, assessment, threats and management, and conservation. The 32 papers that make up this book represent current research and concerns about Marine Biodiversity in Europe and will have wide appeal to all those interested in understanding and preserving the marine ecosystems of the world's oceans.

Challenges to Marine Ecosystems John Davenport, Gavin M. Burnell, Tom Cross, Mark Emmerson, Rob McAllen, Ruth Ramsay, Emer Rogan, 2009-01-29 This volume presents a representative sample of contributions to the 41st European Marine Biology Symposium held in September 2005 in Cork, Ireland. The theme of the symposium was Challenges to Marine Ecosystems and this was divided into four subthemes: Genetics, Marine Protected Areas, Global Climate Change, and Marine Ecosystems Sustainable Fisheries and Agriculture. The world's marine ecosystems face multiple challenges, some natural but many resulting from humankind's activities. Global climate change, driven by influences of energy usage and industrial practices, is a reality now accepted by most of the world's scientists, media, and political establishments. Warming seas and rising sea levels are regarded as threats, while visionaries consider deep ocean carbon disposal as a technological opportunity. Exploitation of the seas continues apace with repeated concerns over the impact of overfishing, plus reservations about the environmental effects of marine aquaculture. We need to understand how resilient organisms and ecosystems are to these challenges while responding by protecting biologically meaningful areas of the oceans. The subthemes of the 41st European Marine Biology

Symposium address all of these matters *Oceanography and Marine Biology* S. J. Hawkins, A. L. Allcock, A. E. Bates, L. B. Firth, I. P. Smith, S. E. Swearer, P. A. Todd, 2019-08-02 *Oceanography and Marine Biology* An Annual Review remains one of the most cited sources in marine science and oceanography The ever increasing interest in work in oceanography and marine biology and its relevance to global environmental issues especially global climate change and its impacts creates a demand for authoritative reviews summarizing the results of recent research This volume covers topics that include resting cysts from coastal marine plankton facilitation cascades in marine ecosystems and the way that human activities are rapidly altering the sensory landscape and behaviour of marine animals For more than 50 years OMBAR has been an essential reference for research workers and students in all fields of marine science From Volume 57 a new international Editorial Board ensures global relevance with editors from the UK Ireland Canada Australia and Singapore The series volumes find a place in the libraries of not only marine laboratories and institutes but also universities Previous volume Impact Factors include Volume 53 4 545 Volume 54 7 000 Volume 55 5 071 Guidelines for contributors including information on illustration requirements can be downloaded on the Downloads Updates tab on the volume s CRC Press webpage Chapters 2 3 4 5 6 and 7 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution Non Commercial No Derivatives CC BY NC ND 4 0 license

Recent Advances in Nemertean Biology Per Lundberg, R. Gibson, G. Berg, 2012-12-06 The nemerteans are a fascinating common and often locally abundant group of invertebrates yet for long have attracted the attention of only a handful of scientists In recent years however increasing numbers of people have developed diverse research interests in the group with the result that our knowledge of these worms has rapidly advanced Clearly there is a need for a regular series of international meetings where individuals working on these animals can meet to exchange ideas review developments concerning nemertean biology and freely discuss future proposals The first such meeting was held in Philadelphia during December 1983 Twenty seven scientists from eight countries participated in the Second International Meeting on Nemertean Biology held at the Tjarno Marine Biological Laboratory Sweden 11 15 August 1986 The meeting was divided into five sessions two dealt with ecological studies two with nemertean taxonomy and the final session covered aspects of general biology A total of 26 papers was presented four by N Anadem G Berg 1 Bierne and 1 M Turbeville were for different reasons not submitted for inclusion in this volume Three additional presentations were made on behalf of B Kulikova E N Willmer and Z Yin all of whom were unable to participate in the meeting

Oceanography and Marine Biology R.N. Hughes, D. J. Hughes, I. P. Smith, A.C. Dale, 2016-11-25 Ever increasing interest in oceanography and marine biology and their relevance to global environmental issues create a demand for authoritative reviews summarizing the results of recent research *Oceanography and Marine Biology* An Annual Review has catered to this demand since its founding by the late Harold Barnes more than 50 years ago Its objectives are to consider annually the basic areas of marine research returning to them when appropriate in future volumes to deal with subjects of

special and topical importance and to add new subjects as they arise The favourable reception and complimentary reviews accorded to all the volumes shows that the series is fulfilling a very real need Volume 54 follows closely the objectives and style of the earlier volumes continuing to regard the marine sciences with all their various aspects as a unity Physical chemical and biological aspects of marine science are dealt with by experts actively engaged in these fields The series is an essential reference text for researchers and students in all fields of marine science and related subjects and it finds a place in libraries of universities marine laboratories research institutes and government departments It is consistently among the highest ranking series in terms of impact factor in the marine biology category of the citation indices compiled by the Institute for Scientific Information Web of Science

Introduction to Marine Genomics J. Mark Cock,Kristin Tessmar-Raible,Catherine Boyen,Frédérique Viard,2010-04-27 Marine biology has always played an important role in biological research being at the origin of many key advances To a certain extent the influence of marine biology on the biological sciences was overshadowed over a period of several years by the remarkable advances that were made using powerful model organisms from terrestrial environments This situation is now changing again however due primarily to spectacular developments in genomic methodologies that have significantly accelerated research in a broad spectrum of marine biology disciplines ranging from biodiversity to developmental biology to biotechnology The data generated by marine genomics projects have had an impact on questions as diverse as understanding planetary geochemical cycles the impact of climate change on marine fauna and flora the functioning of marine ecosystems the discovery of new organisms and novel biomolecules and investigation of the evolution of animal developmental complexity This book represents the first attempt to document how genomic technologies are revolutionising these diverse domains of marine biology Each chapter of this book looks at how these technologies are being employed in a specific domain of marine research and provides a summary of the major results obtained to date The book as a whole provides an overview of marine genomics as a discipline and represents an ideal starting point for exploring this rapidly developing domain

Oceanography and Marine Biology R. N. Gibson,R. J. A. Atkinson,J. D. M. Gordon,R. N. Hughes,2012-06-05 One of the most cited sources in marine science this Golden Anniversary Edition provides an authoritative review summarizing the results of current research in oceanography and marine biology This essential reference for research workers and students in all fields of marine science covers basic areas of marine research as well as subjects of special and topical importance Written by acknowledged experts in their fields this volume presents excellent coverage and quality in the papers presented

Asian Marine Biology 1984 Brian Morton,1984-06-05 This is the annual journal of the Marine Biological Association of Hong Kong It contains papers on marine subjects of interest to all Asian biologists

Island, Ocean and Deep-Sea Biology M.B. Jones,J.M.N. Azevedo,A.I. Neto,A.C. Costa,A.M. Frias Martins,2013-11-11 The 34th European Marine Biology Symposium was held in Ponta Delgada The Azores between 13th and 17th September 1999 It was organised by the University of the Azores in association with the Municipal

Museum of Funchal Madeira and the Plymouth Environment Research Centre University of Plymouth UK The selected topics dictated by the position of the Azores in the Atlantic Ocean were Ecology and Evolution on Island Shores The Open Ocean and The Deep Ocean Each topic was introduced by a recognised expert of international reputation and these keynote reviews provide authoritative summaries of the current status of these very important topics in marine biology The 35 papers which make up this volume bring new ideas and concepts relating to the functioning of marine systems extending from the intertidal through the pelagic realm down to the deep sea The book covers many aspects of the biology of marine organisms and will have wide interest to all those interested in the life of the world's oceans

Life Histories Gary A. Wellborn, Martin Thiel, 2018 Crustaceans are increasingly used as model organisms in all fields of biology as few other taxa exhibit such a variety of body shapes and adaptations to particular habitats and environmental conditions Life Histories is the fifth volume in The Natural History of the Crustacea series An understanding of life histories is crucial to understanding the biology of this fascinating invertebrate group Written by internationally recognized experts studying a wide range of crustacean taxa and topics this volume synthesizes current research in a format that is accessible to a wide scientific audience

Aquatic Food Webs Andrea Belgrano, 2005 Aquatic Food Webs provides a current synthesis of theoretical and empirical food web research The textbook is suitable for graduate level students as well as professional researchers in community ecosystem and theoretical ecology in aquatic ecology and in conservation biology
