## **Marine Pollution New Research:**

**Marine Pollution** Tobias N. Hofer, 2008 Marine pollution is the harmful effect caused by the entry into the ocean of chemicals or particles. An associated problem is that many potentially toxic chemicals adhere to tiny particles which are then taken up by plankton and benthos animals, most of which are either deposit or filter feeders, concentrating them within ocean food chains. Also, because most animal feeds contain high fish meal and fish oil content, toxins can be found a few weeks later in commonly consumed food items derived from livestock and animal husbandry such as meat, eggs, milk, butter, and margarine. One common path of entry by contaminants to the sea are rivers. Many particles combine chemically in a manner highly depletive of oxygen, causing estuaries to become anoxic. This book presents the latest research in the field from around the world.

**Marine Anthropogenic Litter** Melanie Bergmann, Lars Gutow, Michael Klages, 2015-06-01 This book describes how man-made litter, primarily plastic, has spread into the remotest parts of the oceans and covers all aspects of this pollution problem, from the impacts on wildlife and human health to socio-economic and political issues. Marine litter is a prime threat to marine wildlife habitats and food webs worldwide. The book illustrates how advanced technologies from deep sea research, microbiology, and mathematic modelling, as well as classic beach litter counts by volunteers, contributed to the broad awareness of marine litter as a problem of global significance. The authors summarise more than five decades of marine litter research, which receives growing attention after the recent discovery of great oceanic garbage patches and the ubiquity of microscopic plastic particles in marine organisms and habitats. In 16 chapters, authors from all over the world have created a universal view on the diverse field of marine litter pollution, the biological impacts, dedicated research activities, and the various national and international legislative efforts to combat this environmental problem. They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies. This book addresses scientists and it provides a solid knowledge base for policy makers, NGOs, and the broader public.
