NAV Page

The first NAV page is the default NAV page. This page may be quickly selected NAV page by using the **NAV** key.

To select the NAV group and display the default NAV page, press and hold **NAV**.

The default NAV page displays a graphic course deviation indicator (CDI) across the top of the page. Unlike the angular limits used on a mechanical CDI coupled to a VOR or ILS receiver, full scale limits for this CDI are defined by a GPS-derived ± 0.3 , 1.0 or 5.0 nm, as indicated at both ends of the CDI. By default, the scale will automatically adjust to the desired limits based upon the current phase of flight: en route, terminal area or approach. You may also manually select desired scale setting as outlined on pages 141-142.

The graphic CDI shows your position at the center of the indicator, relative to your course (the moving course deviation needle). As with a traditional analog CDI, when you're off course simply steer toward the needle. The CDI arrow in the center of the scale indicates whether you are heading to (arrow) the waypoint or if you have passed the waypoint (a down arrow).

NOTE

The GNC 420 always navigates TO a waypoint unless the OBS switch is set (preventing automatic waypoint sequencing), or you have passed the last waypoint in your flight plan.
