Mathematical Word Problems John Carty, 2023-11-01 John Carty wrote this book to get parents involved in their child's mathematics education especially that aspect involving word problems It goes from age 10 to year 10 so you don't need any Calculus to do any of the questions A sound grasp of Algebra would help in many cases There are 777 questions across 7 categories chapters and John's ideal was a child could start doing 3 or 4 questions a week and this way could be aged 16 before you get through all 777 successfully All answers are provided Hints for problem solving are detailed in the forward but are in no way exhaustive In learning there is nothing wrong with repetition and to go through some chapters 2 or 3 times would enhance maths problem solving skills in many students In some cases there are what maths educators call elegant solutions but in others a parent may come up with a different pathway to the correct answer John has been involved in using mathematics and in mathematics education all his life and feels bringing in the parents is a possible strategy to increasing the capacity of a child's mathematical toolkit

Science Literacy in Primary Schools and Pre-Schools Haim Eshach, 2006-08-12 Science is more than a compilation of facts and figures although one would not know that from observing classroom lessons in science in elementary schools in many parts of the world In fact there are those who argue that science is not appropriate subject content for the early grades of elementary

school There are many schools in which science is simply not present in the earliest grades Even where science is taught in the earliest grades it is often a caricature of science that is presented to the children This book offers a vigorous reasoned argument against the perspective that science doesn't belong in the early grades It goes beyond that in offering a view of science that is both appropriate to the early grades and faithful to the nature of the scientific enterprise Dr Eshach is not a voice in the chorus that claims young children's developmental lack of readiness for such study He believes as do I that in order to learn science one must do science At the heart of the doing of science is the act of exploration and theory formation To do science we must explore the ways in which the world around us looks sounds smells feels and behaves

Play from Birth to Twelve Doris Pronin Fromberg, Doris Bergen, 2006

Publisher description Self-Regulation and Early School Success Megan M. McClelland, Shauna L. Tominey, 2016-04-08

Self regulation has been identified as an important predictor of school readiness and academic achievement in young children Children who struggle with self regulation are at risk of experiencing peer rejection and academic difficulties Teachers report that there is high variability in children's self regulatory abilities at school entry and that children with an accumulation of risk factors are especially likely to enter school without adequate self regulation skills Moreover early academic skills are often cumulative so children who fail to acquire early skills are at risk of falling behind their peers academically and facing achievement gaps that widen over time Although the relation between self regulation and school related outcomes has been clearly documented our understanding of the pathways through which self regulation influences early achievement and school success remains unclear This special issue considers previously neglected areas in the current understanding of self regulation The seven articles focus on issues including a the complex relations between self regulation and school readiness b predictors of self regulation and academic achievement and c advances in measurement of self regulation and related skills Research that continues to investigate the complex relations and mechanisms that influence early self regulation and related outcomes will inform policy and practice in ways that help all children develop the self regulation skills they need The volume will be of interest to researchers in the field of child development or education and educators and policy makers who are interested in promoting school readiness and academic success This book was originally published as a special issue of Early Education and Development
