Bureau of Mines,1991 Key Questions in Rock Mechanics P.A. Cundall,Raymond Sterling,A.M. Starfield,1988 Rapid growth in water requirements makes it necessary to increase the amount of water drawn from rivers The dams necessary for capturing river water have to be built to resist damage when large floods occur and an idea of the possible destructive power of floods is given by the front photograph The need for protection results in thick sill structures fitted with gates and upstream and downstream cut off walls Sediment transported by rivers settles forming deposits behind dams where flow velocities decrease On the other hand where flow velocities are high through hydraulic machinery pums and turbines fed from the dam it can be necessary to remove even fine sand from the water and also to remove floating debris Various hydro mechanical installations including gates and screens are introduced into the flow circuits to deal with sediment and debris problems Many emperical solutions to definition of very important details complement standard design procedures Understanding of their use is facilitated by numerous illustrations Rock Mechanics and Engineering Volume 5 Xia-Ting Feng,2017-07-20 Surface and Underground Projects is the last volume of the five volume set Rock Mechanics and Engineering and contains twenty one chapters from key experts in the following fields Slopes Tunnels and Caverns Mining Petroleum Engineering Thermo Hydro Mechanics in Gas Storage Loading and Radioactive Waste Disposal The five volume set Comprehensive Rock Engineering which was published in 1993 has had an important influence on the development of rock mechanics and rock engineering Significant and extensive advances and achievements in these fields over the last 20 years now justify the publishing of a comparable new compilation Rock Mechanics and Engineering represents a highly prestigious multi volume work edited by Professor Xia Ting Feng with the
