Kerry Turner,2016-01-22 The idea that nature provides services to people is one of the most powerful concepts to have emerged over the last two decades It is shaping our understanding of the role that biodiverse ecosystems play in the environment and their benefits for humankind As a result there is a growing interest in operational and methodological issues surrounding ecosystem services amongst environmental managers and many institutions are now developing teaching programmes to equip the next generation with the skills needed to apply the concepts more effectively This handbook provides a comprehensive reference text on ecosystem services integrating natural and social science including economics Collectively the chapters written by the world s leading authorities demonstrate the importance of biodiversity for people policy and practice They also show how the value of ecosystems to society can be expressed in monetary and non monetary terms so that the environment can be better taken into account in decision making The significance of the ecosystem service paradigm is that it helps us redefine and better communicate the relationships between people and nature It is shown how these are essential to resolving challenges such as sustainable development and poverty reduction and the creation of a green economy in developing and developed world contexts [A guide to forest-water management](#) Food and Agriculture Organization of the United Nations,International Union of Forest Research Organizations,U.S. Department of Agriculture,2021-08-24 Many people worldwide lack adequate access to clean water to meet basic needs and many important economic activities such as energy production and agriculture also require water Climate change is likely to aggravate water stress As temperatures rise ecosystems and the human plant and animal communities that depend on them will need more water to maintain their health and to thrive Forests and trees are integral

to the global water cycle and therefore vital for water security they regulate water quantity quality and timing and provide protective functions against for example soil and coastal erosion flooding and avalanches Forested watersheds provide 75 percent of our freshwater delivering water to over half the world s population The purpose of A Guide to Forest Water Management is to improve the global information base on the protective functions of forests for soil and water It reviews emerging techniques and methodologies provides guidance and recommendations on how to manage forests for their water ecosystem services and offers insights into the business and economic cases for managing forests for water ecosystem services Intact native forests and well managed planted forests can be a relatively cheap approach to water management while generating multiple co benefits Water security is a significant global challenge but this paper argues that water centered forests can provide nature based solutions to ensuring global water resilience
