Caves, 2009 This revised edition continues to provide a comprehensive introduction to the policies and practices of planning Discussing land use urban planning and environmental protection policies the text explains the nature of the planning process

Planning Paradise Peter A. Walker, Patrick T. Hurley, 2011-05-15 *Sprawl* is one of the ugliest words in the American political lexicon Virtually no one wants America s rural landscapes farmland and natural areas to be lost to bland placeless malls freeways and subdivisions Yet few of America s fast growing rural areas have effective rules to limit or contain sprawl Oregon is one of the nation s most celebrated exceptions In the early 1970s Oregon established the nation s first and only comprehensive statewide system of land use planning and largely succeeded in confining residential and commercial growth to urban areas while preserving the state s rural farmland forests and natural areas Despite repeated political attacks the state s planning system remained essentially politically unscathed for three decades In the early and mid 2000s however the Oregon public appeared disenchanted voting repeatedly in favor of statewide ballot initiatives that undermined the ability of the state to regulate growth One of America s most celebrated success stories in the war against sprawl appeared to crumble inspiring property rights activists in numerous other western states to launch copycat ballot initiatives against land use regulation This is the first book to tell the story of Oregon s unique land use planning system from its rise in the early 1970s to its near death experience in the first decade of the 2000s Using participant observation and extensive original interviews with key figures on both sides of the state s land use wars past and present this book examines the question of how and why a planning system that was once the nation s most visible and successful example of a comprehensive regulatory approach to preventing runaway sprawl nearly collapsed *Planning Paradise* is tough love for Oregon planning While admiring much of what the state s planning system has accomplished Walker and Hurley believe that scholars professionals activists and citizens engaged in the battle against sprawl would be

well advised to think long and deeply about the lessons that the recent struggles of one of America's most celebrated planning systems may hold for the future of land use planning in Oregon and beyond By-Right, By-Design Liz Falletta, 2019-06-26 Housing is an essential but complex product so complex that professionals involved in its production namely architects real estate developers and urban planners have difficulty agreeing on good housing outcomes Less than optimal solutions that have resulted from a too narrow focus on one discipline over others are familiar high design that is costly to build that makes little contribution to the public realm highly profitable but seemingly identical cookie cutter dwellings with no sense of place and well planned neighborhoods full of generically designed unmarketable product types Differing roles languages and criteria for success shape these perspectives which in turn influence attitudes about housing regulation Real estate developers for example prefer projects that can be built as of right or by right meaning that they can be approved quickly because they meet all current planning zoning and building code requirements Design focused projects heretofore by design by contrast often require time to challenge existing regulatory codes pursuing discretionary modifications meant to maximize design innovation and development potential Meanwhile urban planners work to establish and mediate the threshold between by right and by design processes by setting housing standards and determining appropriate housing policy But just what is the right line between by right and by design By Right By Design provides a historical perspective conceptual frameworks and practical strategies that cross and connect the diverse professions involved in housing production The heart of the book is a set of six cross disciplinary comparative case studies each examining a significant Los Angeles housing design precedent approved by variance and its associated development type approved as of right Each comparison tells a different story about the often hidden relationships among the three primary disciplines shaping the built environment some of which uphold and others of which transgress conventional disciplinary stereotypes
