## **Hazards And The Communication Of Risk:**

**Hazards and the Communication of Risk** John W. Handmer, Edmund Penning-Rowsell, 1990 Risks and hazards are inevitable by products of technological change and human interaction with the natural environment In recent years however the increase in hazardous incidents worldwide has caused governments commercial and voluntary organizations and the general public to become increasingly concerned about the risks that they face In response to this the United Nations has designated the 1990s as the International Decade for Natural Disaster Reduction Enabling People-Centered Risk Communication for Geohazards Alessandro Amato, Sally H. Potter, Anna Scolobig, Eric M. Thompson, 2024-07-18 In the field of natural hazards communicating science with the public and stakeholders involves entering the challenging and complex world of hazard and risk communication the ultimate purpose of which is to reduce the impact of impending hazards on people at risk According to the Sendai Framework 2015 2030 it is important to strengthen the utilization of media including social media traditional media big data and mobile phone networks to support national measures for successful disaster risk communication Sometimes risk communication has collateral and unexpected side effects that may lead to the adoption of inadequate behaviors In some instances this can even result in legal actions being taken against scientists and or emergency managers The role of the media should be to facilitate the accurate communication of hazard and risk information but such communication is often hampered by the fact that journalists have different agendas and priorities than scientists risk communicators and emergency managers This does not always support people in their decision making Accurate communication of hazard and risk is especially important when decisions have to be made within contexts where uncertainty is very high This is often the case with geohazards such as earthquakes tsunamis volcanic eruptions and landslides

**Communicating Risks to the Public** R.E Kasperson, P.J. Stallen, 2012-12-06 Risk communication the evolution of attempts Risk communication is at once a very new and a very old field of interest Risk analysis as Krinsky and Plough 1988 2 point out dates back at least to the Babylonians in 3200 BC Cultures have traditionally utilized a host of mechanisms for anticipating responding to and communicating about hazards as in food avoidance taboos stigma of persons and places myths migration etc Throughout history trade between places has necessitated labelling of containers to indicate their contents Seals at sites of the ninth century BC Harappan civilization of South Asia record the owner and or contents of the containers Hadden 1986 3 The Pure Food and Drug Act the first labelling law with national scope in the United States was passed in 1906 Common law covering the workplace in a number of countries has traditionally required that employers notify workers about significant dangers that they encounter on the job an obligation formally extended to chronic hazards in the OSHA s Hazard Communication regulation of 1983 in the United States In this sense risk communication is probably the oldest way of risk management However it is only until recently that risk communication has attracted the attention of regulators as an explicit alternative to the by now more common and formal approaches of standard setting insuring etc Baram 1982
