Heat How To Stop The Planet Burning:

Heat George Monbiot, 2009-03-19 George Monbiot's *Heat How to Stop the Planet from Burning* marks an important moment in our civilization's thinking about global warming. The question is no longer whether climate change is actually happening. The question is what to do about it. Monbiot offers an ambitious and far-reaching program to cut our carbon dioxide emissions to the point where the environmental scales start tipping away from catastrophe. But not before he devotes a chapter to unmasking the vested interests that have spent fortunes funding the specious science of the climate change deniers. It now seems certain that we need a 90% cut in our emissions by 2030 to prevent runaway climate change from taking place. For the first time this book explains how the cut could be achieved without bringing industrial civilisation to an end. Combining his unique knowledge of political campaigning and environmental science, Monbiot analyses the potential of energy efficiency, renewable resources, carbon burial, nuclear power, and new transport and building systems to discover what works, what doesn't, what costs the least, and what needs to be done to make change happen. He is not afraid to attack anyone, friend or foe, whose claims are false or whose figures have been fudged. His original, sometimes shocking programme shows that we can reconcile our demands for comfort and security with the survival of the biosphere. Rigorous, passionate, and totally surprising, this book could change the world. It is possible to slow the momentum of this global crisis if we act decisively. In this riveting fiery book, the No Logo of the environmental movement, George Monbiot shows us how. *Heat* George Monbiot, 2007 A brilliant and terrifying book that forces us to move beyond denial and into action. *Heat* George Monbiot, 2006 *Heat* George Monbiot, 2007-06-07 Started to worry about just how hot our world is going to get and whether you can do anything about it. As the effect of climate change grows by the day, so does the amount of hot air and bluster spouted by politicians and businessmen on what we should do about it. What with the excuses, the lies, the fudged figures, the PR greenwashing, and the downright misinformation on the power of everything from wind turbines to carbon trading, when it comes to saving the world, most people don't know what they're talking about. Luckily, George Monbiot, scourge of big business, ruler of governments, arch enemy of climate change deniers everywhere, does. Packed with killer facts and inspiring ideas, shot through with passion and underlined by brilliant investigative journalism, with a copy of *Heat* you really can protect the planet. I defy you to read this book and not feel motivated to change. *The Times* *Plan for the Planet* Ian Chambers, John William Humble, 2012 The scale of the global issues we are facing today—unsustainable population growth, climate change, energy supplies, water and food supplies, planet sustainability, and biodiversity, extreme poverty, global health, universal education, conflict management, and financing sustainability—are more daunting than ever. Nevertheless, these issues must be addressed in a coordinated global manner. That's why the authors of *Plan for the Planet* outline an approach to achieving change which can be adopted and implemented at every level: government, business, community, and as an individual. *Routledge Handbook of Media, Conflict and Security* Piers Robinson, Philip Seib, Romy Frohlich, 2016-11-10

This Handbook links the growing body of media and conflict research with the field of security studies. The academic sub field of media and conflict has developed and expanded greatly over the past two decades. Operating across a diverse range of academic disciplines, academics are studying the impact the media has on governments pursuing war responses to humanitarian crises and violent political struggles and the role of the media as a facilitator of and a threat to both peace building and conflict prevention. This handbook seeks to consolidate existing knowledge by linking the body of conflict and media studies with work in security studies. The handbook is arranged into five parts: Theory and Principles; Media, the State and War; Media and Human Security; Media and Policymaking within the Security State; New Issues in Security and Conflict and Future Directions. For scholars of security studies, this handbook will provide a key point of reference for state of the art scholarship concerning the media security nexus. For scholars of communication and media studies, the handbook will provide a comprehensive mapping of the media conflict field.

Understanding Global Climate Change Arthur P

Cracknell, Costas A Varotsos, 2021-07-27. Climate change, a familiar term today, is far more than just global warming due to atmospheric greenhouse gases including CO₂. In order to understand the nature of climate change, it is necessary to consider the whole climatic system, its complexity, and the ways in which natural and anthropogenic activities act and influence that system and the environment. Over the past 20 years, since the first edition of *Understanding Global Climate Change* was published, not only has the availability of climate related data and computer modelling changed, but our perceptions of it and its impact have changed as well. Using a combination of ground data, satellite data, and human impacts, this second edition discusses the state of climate research today on a global scale and establishes a background for future discussions on climate change. This book is an essential reference text relevant to any and all who study climate and climate change. Features: Provides a thought provoking and original approach to the science of climate. Emphasises that there are many factors contributing to the causation of climate change. Clarifies that while anthropogenic generation of carbon dioxide is important, it is only one of several human activities contributing to climate change. Considers climate change responses needed to be undertaken by politicians and society at national and global levels. Totally revised and updated with state of the art satellite data and climate models currently in operation around the globe.

Global Fever William H. Calvin, 2010-08-09 *The Positive Deviant* Sara Parkin, 2010. An economy low in carbon and high in life satisfaction will require thousands if not millions of exceptional leaders. This book is the first to bring together sustainability knowledge with the leadership skills and tools to help you become one of those leaders. In it, you will find everything you need to get started straight away and to grow your effectiveness even in a world that remains perversely intent on the opposite. Whether you are new to the whole idea of sustainability or reasonably well informed but not entirely confident about what to do for the best, this guide will help you do sustainability. Free of checklists and policy recommendations, the focus is on you and on developing your capacity to identify the right thing to do wherever you are and whatever your circumstances. This is essential reading for those in or aspiring to

sustainability literate leadership and a must for all those teaching leadership and management

Climate Change and Future Justice Catriona McKinnon, 2012-03-12 Climate change creates unprecedented problems of intergenerational justice What do members of the current generation owe to future generations in virtue of the contribution they are making to climate change Providing important new insights within the theoretical framework of political liberalism Climate Change and Future Justice presents arguments in three key areas Mitigation the current generation ought to adopt a strong precautionary principle in formulating climate change policy in order to minimise the risks of serious harm from climate change imposed on future generations Adaptation the current generation ought to create a fund to which members of future generations may apply for compensation if the risks of climate change harm imposed on them by the current generation ripen into harms Triage future generations ought to keep alive hope for a return to the framework of justice for the social cooperation of future people less burdened by climate change harms This work presents agenda setting applications of important principles of democratic equality to the most serious set of political challenges ever faced by human society It should be required reading for political theorists and environmental philosophers *A Reef in Time* J.E.N. Veron, 2008-01-31 Like many coral specialists fifteen years ago Veron thought Australia's Great Barrier Reef was impervious to climate change Then he saw for himself the devastation that elevated sea temperatures can inflict on corals

Global Warming and the Political Ecology of Health Hans Baer, Merrill Singer, 2016-09-17 In this groundbreaking global analysis of the relationship between climate change and human health Hans Baer and Merrill Singer inventory and critically analyze the diversity of significant and sometimes devastating health implications of global warming Using a range of theoretical tools from anthropology medicine and environmental sciences they present ecosyndemics as a new paradigm for understanding the relationship between environmental change and disease They also go beyond the traditional concept of disease to examine changes in subsistence and settlement patterns land use and lifeways throwing the sociopolitical and economic dimensions of climate change into stark relief Revealing the systemic structures of inequality underlying global warming they also issue a call to action arguing that fundamental changes in the world system are essential to the mitigation of an array of emerging health crises link to anthropogenic climate and environmental change

The Zero-Carbon House Martin Godfrey Cook, 2011-09-16 Zero Carbon is an abstract concept for most people but we have lived energy profligate lifestyles for too long on finite fossil fuel resources We now face potential environmental catastrophe from climate change and global warming with a continuing exponentially expanding global population that doubles every four decades The capacity of the planet to reabsorb carbon dioxide is about two to three tonnes of carbon equivalent per person at current population levels of seven billion and therefore there is a desperate need for us to reduce our carbon footprint A way of helping to achieve this is to live in a zero carbon house and this will become UK legislation for new homes by 2016 This fascinating book covers all aspects of the zero carbon house from its evolution to achieving carbon neutrality in old and new homes as well as entire communities

Includes an overview of zero carbon and how to achieve it on a global scale covers communities of zero carbon houses and provides inspirational examples of low carbon lifestyles Case studies show how principles are put into successful practice to save energy carbon money and the environment

The Sea Is Rising and So Are We Cynthia Kaufman,2021-06-29 The Sea is Rising and So Are We A Climate Justice Handbook is an invitation to get involved in the movement to build a just and sustainable world in the face of the most urgent challenge our species has ever faced By explaining the entrenched forces that are preventing rapid action it helps you understand the nature of the political reality we are facing and arms you with the tools you need to overcome them The book offers background information on the roots of the crisis and the many rapidly expanding solutions that are being implemented all around the world It explains how to engage in productive messaging that will pull others into the climate justice movement what you need to know to help build a successful movement and the policy changes needed to build a world with climate justice It also explores the personal side how engaging in the movement can be good for your mental health It ends with advice on how you can find the place where you can be the most effective and where you can build climate action into your life in ways that are deeply rewarding

Water Wind Art and Debate Gavin Birch,2007-10-12 The Australian community has become increasingly concerned about environmental issues resulting in the Australian government placing a higher priority on global warming and climate change This unique compilation Water Wind Art and Debate highlights current research across a variety of Humanities and Science disciplines

The Philosophical Foundations of Ecological Civilization Arran Gare,2016-08-05 The global ecological crisis is the greatest challenge humanity has ever had to confront and humanity is failing The triumph of the neo liberal agenda together with a debauched scientism has reduced nature and people to nothing but raw materials instruments and consumers to be efficiently managed in a global market dominated by corporate managers media moguls and technocrats The arts and the humanities have been devalued genuine science has been crippled and the quest for autonomy and democracy undermined The resultant trajectory towards global ecological destruction appears inexorable and neither governments nor environmental movements have significantly altered this or indeed seem able to The Philosophical Foundations of Ecological Civilization is a wide ranging and scholarly analysis of this failure This book reframes the dynamics of the debate beyond the discourses of economics politics and techno science Reviving natural philosophy to align science with the humanities it offers the categories required to reform our modes of existence and our institutions so that we augment rather than undermine the life of the ecosystems of which we are part From this philosophical foundation the author puts forth a manifesto for transforming our culture into one which could provide an effective global environmental movement and provide the foundations for a global ecological civilization

Climate Change and Environmental Ethics Ved P. Nanda,2012-12-01 There is a broad consensus that climate change presents the international community with a formidable challenge Yet progress on all fronts prevention mitigation and adaptation has been slow Ved P Nanda finds an explanation for this disparity in the sharp divide between the developed

and developing countries Developing countries demand that major industrialized nations provide the necessary resources and technology to address climate change while many developed countries seek firm commitments and timetables on action from the developing countries The result is a stalemate Climate Change and Environmental Ethics contains first rate research and thinking from scholars from multiple disciplines ethics ecology philosophy economics political science history and international law What distinguishes this volume from recent work on climate change are two of its special features One is the multi disciplinary backgrounds of the scholars their stellar experiences and the wisdom with which they express not simply their philosophy and theory but also their suggestions for concrete specific action in practical terms The second is the special niche this volume fills in its overarching theme of the need for a renewed environmental ethic that can bring together these disparate but interconnected views This volume explores alternative ways of conceiving our relation to the natural world A spirit of international cooperation and collaboration is needed to meet the challenge The reader is compelled to think anew about our understanding of the scientific and technical issues as well as our values and ethical responsibilities regarding climate change

Cool Capitalism Jim McGuigan, 2009-10-09 Thomas Frank coined the term the conquest of cool This book shows how this conquest is at the heart of the dynamics of contemporary capitalism Jim McGuigan argues that cool capitalism incorporates disaffection into capitalism itself absorbing rebellion and neutralising opposition to the present system of culture and society The book explores a huge variety of cultural examples from the sleek images of mainstream advertising to the fringes of artistic production offering a vigorous critique of our understanding of subversion resistance and counter culturalism Is there still any space left for rebellion against the seductive power of the free market economy

Post-growth Politics Peter Ferguson, 2018-06-19 This book uses a critical political economy approach to develop an historically and politically grounded set of strategies for states to move toward a post growth decarbonised global economy It begins by examining the social and ecological costs of and limits to economic growth and determines that significant decarbonisation of the global economy can only be achieved if conventional growth based economies are replaced by an alternative post growth economy Set apart from many other works in the field by its critical political economy approach to policy development this book offers the reader three distinctive features First it places the analysis in historical context in order to demonstrate how the global political economy is constantly changing with respect to distributions of wealth power and fundamental norms and explores how states might harness and transform these contingent patterns in a post growth direction Second the book is not only concerned with developing and advocating post growth policies but also with how these measures can be incorporated into the high level domestic and international strategies pursued by states to ensure their political legitimacy and economic and geopolitical survival Third rather than proposing an idealised and politically naive model of socioecological transformation the proposed post growth policy framework is highly cognisant of the geopolitical and international economic pressures facing states and demonstrates how these can be managed in the transition toward a

post growth economy This book represents an invaluable resource for policymakers academics activists and students wishing to study or contribute to the transition to a post growth decarbonised economy [Hell and High Water](#) Alistair McIntosh, 2012-07-30 The ecologist and author of *Soil Soul* makes a compelling and provocative argument for a new way of life in the face of climate change Climate change is the greatest challenge that the world has ever faced In this groundbreaking book Alastair McIntosh summarizes the science of what is happening to the planet using his home country of Scotland as a case study He then argues that the root of our climate crisis is not in our politics but in our consumerism an addictive mentality where wants have replaced needs and consumption drives our very identity In a fascinating journey through literature that speaks to climate change including the ancient Sumerian Epic of Gilgamesh Plato s myth of Atlantis and Shakespeare s *Macbeth* McIntosh reveals the psychohistory of modern consumerism He shows how we have fallen prey to a numbing culture of violence and the manipulation of marketing Only when we resist these vices and face reality will we discover the spiritual meaning of our troubled times Only then can magic new meaning and all that gives life start to mend a broken world What McIntosh does brilliantly here is offer an alternative deeply humanist version of green politics The Scotsman UK
