Computational Power Massimo Durante, 2021-03-11 We delegate more and more decisions and tasks to artificial agents machine learning mechanisms and algorithmic procedures or in other words to computational systems Not that we are driven by powerful ambitions of colonizing the Moon replacing humans with legions of androids creating sci fi scenarios la Matrix or masterminding some sort of Person of Interest like Machine No the current digital revolution based on computational power is chiefly an everyday revolution It is therefore that much more profound unnoticed and widespread for it affects our customary habits and routines and alters the very texture of our day to day lives This opens a precise line of inquiry which constitutes the basic thesis of the present text our computational power is exercised by trying to adapt not just the world but also our representation of reality to how computationally based ICTs work The impact of this technology is such that it does not leave things as they are it changes the nature of agents habits objects and institutions and hence it subverts the existing

order without necessarily generating a new one I argue that this power is often not distributed in an egalitarian manner but on the contrary is likely to result in concentrations of wealth in dominant positions or in unjust competitive advantages This opens up a struggle with respect to which the task of reaffirming the fundamental values the guiding principles the priorities and the rules of the game which can transform or attempt to transform a fierce confrontation between enemies in a fair competition between opponents rests on us

Measuring User Engagement Mounia Lalmas, Heather O'Brien, Elad Yom-Tov, 2022-05-31 User engagement refers to the quality of the user experience that emphasizes the positive aspects of interacting with an online application and in particular the desire to use that application longer and repeatedly User engagement is a key concept in the design of online applications whether for desktop tablet or mobile motivated by the observation that successful applications are not just used but are engaged with Users invest time attention and emotion in their use of technology and seek to satisfy pragmatic and hedonic needs Measurement is critical for evaluating whether online applications are able to successfully engage users and may inform the design of and use of applications User engagement is a multifaceted complex phenomenon this gives rise to a number of potential measurement approaches Common ways to evaluate user engagement include using self report measures e.g questionnaires observational methods e.g facial expression analysis speech analysis neuro physiological signal processing methods e.g respiratory and cardiovascular accelerations and decelerations muscle spasms and web analytics e.g number of site visits click depth These methods represent various trade offs in terms of the setting laboratory versus in the wild object of measurement user behaviour affect or cognition and scale of data collected For instance small scale user studies are deep and rich but limited in terms of generalizability whereas large scale web analytic studies are powerful but negate users motivation and context The focus of this book is how user engagement is currently being measured and various considerations for its measurement Our goal is to leave readers with an appreciation of the various ways in which to measure user engagement and their associated strengths and weaknesses We emphasize the multifaceted nature of user engagement and the unique contextual constraints that come to bear upon attempts to measure engagement in different settings and across different user groups and web domains At the same time this book advocates for the development of good measures and good measurement practices that will advance the study of user engagement and improve our understanding of this construct which has become so vital in our wired world
