Offit, 2018-06-19 Science doesn t speak for itself Neck deep in work that can be messy and confounding and naive in the ways of public communication scientists are often unable to package their insights into the neat narratives that the public requires Enter celebrities advocates lobbyists and the funders behind them who take advantage of scientists reluctance to provide easy answers flooding the media with misleading or incorrect claims about health risks Amid this onslaught of spurious information Americans are more confused than ever about what s good for them and what isn t In *Bad Advice* Paul A Offit shares hard earned wisdom on the dos and don ts of battling misinformation For the past twenty years Offit has been on the front lines in the fight for sound science and public health Stepping into the media spotlight as few scientists have done such as being one of the first to speak out against conspiracy theories linking vaccines to autism he found himself in the crosshairs of powerful groups intent on promoting pseudoscience *Bad Advice* discusses science and its adversaries not just the manias stoked by slick charlatans and their miracle cures but also corrosive dangerous ideologies such as Holocaust and climate change denial Written with wit and passion Offit s often humorous guide to taking on quack experts and self appointed activists is a must read for any American disturbed by the uptick in politicized attacks on science *Sins Against Science* Judi Nath, 2021-11-10 Misinformation has had dramatic and dangerous effects as evidenced by numerous events of the late 2010s and early 2020s Reading a steady stream of misinformation leads to distrust potentially leading to conflict in one s family and workplace and even to civil

unrest At the heart of many such matters is scientific illiteracy Many people enjoy a life of ease and convenience because of science and since science also crosses courtrooms classrooms and cultures it has great potential to debunk misinformation and untangle the confusion on such issues as vaccines sexual identity race and evolution alternative medicine and human reproduction This book addresses those issues and the popular stories conspiracies and misleading headlines that circulate across media platforms Bringing accurate knowledge into people s agendas is challenging and this book uses science and facts as a basis of every deliberation over laws and policies The chapters weave together history politics human biology and law and demonstrate how our lives are dependent on understanding the nature of things **Denialism** Michael

Specter,2009-10-29 In this provocative and headline making book Michael Specter confronts the widespread fear of science and its terrible toll on individuals and the planet In *Denialism* New Yorker staff writer Michael Specter reveals that Americans have come to mistrust institutions and especially the institution of science more today than ever before For centuries the general view had been that science is neither good nor bad that it merely supplies information and that new information is always beneficial Now science is viewed as a political constituency that isn t always in our best interest We live in a world where the leaders of African nations prefer to let their citizens starve to death rather than import genetically modified grains Childhood vaccines have proven to be the most effective public health measure in history yet people march on Washington to protest their use In the United States a growing series of studies show that dietary supplements and natural cures have almost no value and often cause harm We still spend billions of dollars on them In hundreds of the best universities in the world laboratories are anonymous unmarked and surrounded by platoons of security guards such is the opposition to any research that includes experiments with animals And pharmaceutical companies that just forty years ago were perhaps the most visible symbol of our remarkable advance against disease have increasingly been seen as callous corporations propelled solely by avarice and greed As Michael Specter sees it this amounts to a war against progress The issues may be complex but the choices are not Are we going to continue to embrace new technologies along with acknowledging their limitations and threats or are we ready to slink back into an era of magical thinking In *Denialism* Specter makes an argument for a new Enlightenment the revival of an approach to the physical world that was stunningly effective for hundreds of years What can be understood and reliably repeated by experiment is what nature regarded as true Now at the time of mankind s greatest scientific advances and our greatest need for them that deal must be renewed 101
