Information Systems And The Environment:

Information Systems and the Environment National Academy of Engineering, 2001-09-13 Information technology is a powerful tool for meeting environmental objectives and promoting sustainable development This collection of papers by leaders in industry government and academia explores how information technology can improve environmental performance by individual firms collaborations among firms and collaborations among firms government agencies and academia Information systems can also be used by nonprofit organizations and the government to inform the public about broad environmental issues and environmental conditions in their neighborhoods Several papers address the challenges to information management posed by the explosive increase in information and knowledge about environmental issues and potential solutions including determining what information is environmentally relevant and how it can be used in decision making In addition case studies are described and show how industry is using information systems to ensure sustainable development and meet environmental standards The book also includes examples from the public sector showing how governments use information knowledge systems to disseminate best practices beyond big firms to small businesses and from the world of the Internet showing how knowledge is shared among environmental advocates and the general public

Environmental Software Systems Ralf Denzer, Gerald Schimak, D.W. Russell, 2013-06-05 Due to increasing practical needs software support of environmental protection and research tasks is growing in importance and scope Software systems help to monitor basic data to maintain and process relevant environmental information to analyze gathered information and to carry out decision processes which often have to take into account complex alternatives with various side effects Therefore software is an important tool for the environmental domain When the first software systems in the environmental domain grew 10 to 15 years ago users and developers were not really aware of the complexity these systems are carrying with themselves complexity with respect to entities tasks and procedures I guess nobody may have figured out at that time that the environmental domain would ask for solutions which information science would not be able to provide and in several cases can not provide until today Therefore environmental informatics as we call it today is also an important domain of computer science itself because practical solutions need to deal with very complex interdisciplinary distributed integrated sometimes badly defined user centered decision processes I doubt somebody will state that we are already capable of building such integrated systems for end users for reasonable cost on a broad range The development of the first scientific community for environmental informatics started around 1985 in Germany becoming a technical committee and working group of the German Computer Society in 1987

Advanced Agent-Based Environmental Management Systems Ulises Cortes Garcia, Manel Poch, 2009-03-08 Multi agent Systems MAS are one of the most exciting research areas in Artificial Intelligence meanwhile Environmental Studies is a research area of strategic interest Both areas can provide society with solutions for many real applications in order to use and protect the environment Human activities imply intervention into

nature but properly managed these interventions can not be only ecologically sound but also favourable to the sustainable development of civilisation The encounter between these fields is a new challenge for many researchers of both communities This book presents a comprehensive reference of state of the art efforts Specifically it presents current and future ways in which adaptive information technologies techniques protocols and architectures such as software agent technologies and multi agent systems can be used to support the development of real world agent based systems in the area of e Environment

Databases and Information Systems V Hele-Mai Haav,Ahto Kalja,2009 The Eighth International Baltic Conference on Databases and Information Systems took place on June 2 5 2008 in Tallinn Estonia This conference is continuing a series of successful bi annual Baltic conferences on databases and information systems IS The aim is to provide a wide international forum for academics and practitioners in the field of databases and modern information systems for exchanging their achievements in this area The original research results presented in Databases and Information Systems V mostly belong to novel fields of IS and database research such as database technology and the semantic web ontology based IS IS and AI technologies and IS integration The contribution of Dr Jari Palom ki showed how different ontological commitments affect the way we are modeling the world when creating an information system As semantic technologies have been gaining more attention recently a special session on semantic interoperability of IS was organized The invited talks from each Baltic State gave a good insight how semantic interoperability initiatives are developing in each of the Baltic States and how they relate to the European semantic interoperability framework *Agriculture and Environment Perspectives in Intelligent Systems* Jaehwa Park,2019-06-15 The eventual aim when applying digital technologies in agriculture is to replace or reduce the human labor required for agricultural production Large amounts of heterogeneous data are essential for integration studies of automated agriculture and the digitalization of agriculture is helping to fulfill the demand for this data but management of the data gathered presents its own challenges That is where the Intelligent Environment IE paradigm comes into play to guide the design of the systems techniques and algorithms able to analyze the data and provide recommendations for farmers managers and other stakeholders This book *Agriculture and Environment Perspectives in Intelligent Systems* is divided into 5 chapters Chapter 1 explores the use of intelligent systems in Controlled Environment Agriculture CEA facilities Chapter 2 reviews the adoption of intelligent systems in the research field of biomonitoring Chapter 3 proposes an intelligent system to acquire and pre process data for precision agriculture applications Chapter 4 illustrates the use of intelligent algorithms to make more efficient use of scarce resources such as water and Chapter 5 focuses on the generation of intelligent models to predict frosts in crops in south eastern Spain There is still a need to bridge the gap between the needs of farmers environmental managers and stakeholders and the solutions offered by information and communication technology This book will be of interest to all those working in the field *Inventory of Federal Energy-related Environment and Safety Research for FY 1978: Project listings and indexes* ,1979 **Inventory of Federal Energy-related**

Environment and Safety Research for ..., 1978 **Progress in Sustainable Development Research** Roberto Antonio Lopez, 2008 This book presents new and important research advances in the field of sustainable development which has been defined as balancing the fulfilment of human needs with the protection of the Natural environment so that these needs can be met not only in the present but in the indefinite future The term was used by the Brundtland Commission which coined what has become the most often quoted definition of sustainable development as development that meets the needs of the present without compromising the ability of future generations to meet their own need The field of sustainable development can be conceptually broken into four constituent parts environmental sustainability economic sustainability social sustainability and political sustainability **Advances and New Trends in Environmental and Energy Informatics** Jorge Marx Gomez, Michael Sonnenschein, Ute Vogel, Andreas Winter, Barbara Rapp, Nils Giesen, 2015-12-24 This book presents the latest findings and ongoing research in the field of green information systems and green information and communication technology ICT It provides insights into a whole range of cross cutting topics in ICT and environmental sciences as well as showcases how information and communication technologies allow environmental and energy efficiency issues to be handled effectively The papers presented in this book are a selection of extended and improved contributions to the 28th International Conference on Informatics for Environmental Protection dedicated to ICT for energy efficiency This book is essential and particularly worth reading for those who already gained basic knowledge and want to deepen and extend their expertise in the subjects mentioned above *Decision Support Systems in Agriculture, Food and the Environment: Trends, Applications and Advances* Manos, Basil, Matsatsinis, Nikolaos, Paparrizos, Konstantinos, Papathanasiou, Jason, 2010-06-30 As national and international concern over sustainable resources becomes more prevalent the need for decision support systems DSS increases The applicable uses of a successful system can assist in the sustainability of resources as well as the efficiency and management of the agri environment industry Decision Support Systems in Agriculture Food and the Environment Trends Applications and Advances presents the development of DSS for managing agricultural and environmental systems focusing on the exposition of innovative methodologies from web mobile systems to artificial intelligence and knowledge based DSS as well as their applications in every aspect from harvest planning to international food production and land management This book provides an in depth look into the growing importance of DSS in agriculture **Fundamentals of Auditing** Basu, 2010-09 Geographic Information Systems Evaluation Conducted for the New Jersey Shore Protection Study Douglas A. Gaffney, David L. Timpy, Stephen W. Long, 1990 **Expert Systems in Environmental Planning** Jeff R. Wright, Lyna L. Wiggins, Ravinder K. Jain, T. John Kim, 2012-12-06 The connections between economics planning and the environment are receiving increased attention among scholars and policy makers in many countries The common denominator among these three variables is the earth's life support systems the ecosystems on which the world depends When we describe our physical surroundings as a collection of possible uses we are

establishing linkages between economics planning and the environment Because possible alternative uses compete with each other and conflicts arise over scarce land resources the varying environmental impacts of alternative uses are major concerns for the current as well as the next generation How to achieve sustainable development is the pressing question for today's environmental professionals Environmental planners and engineers help us study the implications of our choices and new technologies and techniques that improve the practice of environmental planning should enhance our ability to protect our future The depletion of the earth's natural resources and loss of biodiversity the degradation of air land and water quality the accumulation of greenhouse gases leading to changes in our climate and the depletion of the ozone layer comprise only a partial list of environmental issues that concern our policy makers To support their decisions environmental planning must be a multidimensional and multidisciplinary activity that incorporates social economic political geographical and technical factors Solutions for problems in these areas frequently require not only numerical analyses but also heuristic analyses which in turn depend on the intuitive judgements of planners and engineers

Environmental Monitoring G. Bruce Wiersma, 2004-04-27 The current rate and scale of environmental change around the world makes the detection and understanding of these changes increasingly urgent Subsequently government legislation is focusing on measurable results of environmental programs requiring researchers to employ effective and efficient methods for acquiring high quality data Focusing on pollution issues and impacts resulting from human activities Environmental Monitoring is the first to bring together the conceptual basis behind the complex and specific approaches to the monitoring of air water and land Coverage includes integrated monitoring at the landscape level as well as case studies of existing monitoring programs such as the Chesapeake Bay Program The book also addresses the recent legislative focus on high quality data results and conducting monitoring programs in different ecosystems and environmental media
