Passman, 2013-07-24 This groundbreaking monograph in advanced algebra addresses crossed products which involve group and ring theory and the study of infinite group algebras group graded rings and the Galois theory of noncommutative rings 1989 edition

Operator Structures and Dynamical Systems Marcel de Jeu, 2009-11-30 This volume contains the proceedings of a Leiden Workshop on Dynamical Systems and their accompanying Operator Structures which took place at the Lorentz Center in Leiden The Netherlands on July 21 25 2008 These papers offer a panorama of selfadjoint and non selfadjoint operator algebras associated with both noncommutative and commutative topological dynamical systems and related subjects Papers on general theory as well as more specialized ones on symbolic dynamics and complex dynamical systems are included

Geometry, Topology, and Dynamics in Negative Curvature C. S. Aravinda, F. T. Farrell, J. -F. Lafont, 2016-01-21 The ICM 2010 satellite conference Geometry Topology and Dynamics in Negative Curvature afforded an excellent opportunity to discuss various aspects of this fascinating interdisciplinary subject in which methods and techniques from geometry topology and dynamics often interact in novel and interesting ways Containing ten survey articles written by some of the leading experts in the field this proceedings volume provides an overview of important recent developments relating to negative curvature Topics covered include homogeneous dynamics harmonic manifolds the Atiyah Conjecture counting circles and arcs and hyperbolic buildings Each author pays particular attention to the expository aspects making the book particularly useful for graduate students and mathematicians interested in transitioning from other areas via the common theme of negative curvature

Noncommutative Localization in Algebra and Topology Andrew Ranicki, 2006-02-09 Noncommutative localization is a powerful algebraic technique for constructing new rings by inverting elements matrices and more generally morphisms of modules Originally conceived by algebraists notably P M Cohn it is now an important tool not only in pure algebra but also in the topology of non simply connected spaces algebraic geometry and noncommutative geometry This volume consists of 9 articles on noncommutative localization in algebra and topology by J A Beachy P M Cohn W G Dwyer P A Linnell A Neeman A A Ranicki H Reich D Sheiham and Z Skoda The articles include basic definitions surveys historical background and applications as well as presenting new results The book is an introduction to the subject an account of the state of the art and also provides many references for further material It is suitable for graduate students and more advanced researchers in both algebra and topology

Groups, Rings and Algebras Donald S. Passman, William Chin, James Osterburg, Declan Patrick Francis Quinn, 2006 This is a companion volume to the conference in honor of Donald S Passman held in Madison Wisconsin in June 2005 It contains research papers on Algebras Group Rings Hopf Algebras Invariant Theory Lie Algebras and their Enveloping Algebras Noncommutative Algebraic Geometry Noncommutative Rings and other topics The papers represent an important part of the latest research in these areas

Group Rings, Crossed

Products, and Galois Theory Donald S. Passman, 1986 For readers with a basic graduate level background in algebra these ten articles provide a readable introduction to three major interrelated subjects of noncommutative algebra The theme is the interplay between group theory and ring theory dealing specifically with group rings crossed products and the Galois theory of rings The author has carefully included most definitions to keep the required background minimal Furthermore each article contains a selection of results on the given topic a limited number of proofs or sketches and at least a few open problems

Trends in Ring Theory Vlastimil Dlab, László Márki, 1998 The Ring Theory Conference held at the University of Miskolc Hungary successfully accomplished its two goals to reflect contemporary trends in the subject area and to offer a meeting place for a large number of Eastern European algebraists and their colleagues from around the world Particular emphasis was placed on recent developments in the following four areas representation theory group algebras PI algebras and general ring theory This book presents 13 of the invited lectures

The Algebraic Structure of Group Rings Donald S. Passman, 2011-01-01 Highly recommended by the Bulletin of the London Mathematical Society this book offers a comprehensive self contained treatment of group rings The subject involves the intersection of two essentially different disciplines group theory and ring theory The Bulletin of the American Mathematical Society hailed this treatment as a majestic account proclaiming it encyclopedic and lucid 1985 edition

A Course in Ring Theory Donald S. Passman, 2004 A textbook presenting a module theoretic approach to various aspects of commutative and noncommutative ring theory for students familiar with basic ring theory concepts such as ideals and homomorphisms but not necessarily with modules Annotation copyrighted by Book News Inc Portland OR

Scattering Theory, Revised Edition Peter D. Lax, Ralph S. Phillips, 1990-02-22 This revised edition of a classic book which established scattering theory as an important and fruitful area of research reflects the wealth of new results discovered in the intervening years This new revised edition should continue to inspire researchers to expand the application of the original ideas proposed by the authors

The Concise Handbook of Algebra Alexander V. Mikhalev, G.F. Pilz, 2013-06-29 It is by no means clear what comprises the heart or core of algebra the part of algebra which every algebraist should know Hence we feel that a book on our heart might be useful We have tried to catch this heart in a collection of about 150 short sections written by leading algebraists in these areas These sections are organized in 9 chapters A B I Of course the selection is partly based on personal preferences and we ask you for your understanding if some selections do not meet your taste for unknown reasons we only had problems in the chapter Groups to get enough articles in time We hope that this book sets up a standard of what all algebraists are supposed to know in their chapters interested

people from other areas should be able to get a quick idea about the area So the target group consists of anyone interested in algebra from graduate students to established researchers including those who want to obtain a quick overview or a better understanding of our selected topics The prerequisites are something like the contents of standard textbooks on higher algebra This book should also enable the reader to read the big Handbook Hazewinkel 1999 and other handbooks In case of multiple authors the authors are listed alphabetically so their order has nothing to do with the amounts of their contributions
