Information Seeking And Subject Representation An Activity Theoretical Approach To Information Science:

Information Seeking and Subject Representation Birger Hjørland, 1997-07-16 Information science has for a long time been drawing on the knowledge produced in psychology and related fields This is reasonable for the central issue in information science concerns individual users navigating information spaces such as libraries databases and the Internet Thus information seeking is the fundamental problem in information science while other problems such as document representation are subordinate This book proposes a general theory of information seeking as a theoretical basis for information science The volume begins with an examination of subject representation and retrieval It then considers subject analysis and the organization of knowledge the interpretational processes by which documents are analyzed and their explicit subject retrieval data are created Existing theories are then criticized from four epistemological perspectives and the author argues that information science should be based on methodological collectivism in which society rather than the individual determines the meaning of knowledge The work then analyzes information seeking as a methodologically collectivistic activity The volume begins with an examination of subject representation and retrieval It then considers subject analysis and the organization of knowledge the interpretational processes by which documents are analyzed and their explicit subject retrieval data are created Existing theories are then criticized from four epistemological perspectives and the author argues that information science should be based on methodological collectivism in which society rather than the individual determines the meaning of knowledge The work then analyzes information seeking as a methodologically collectivistic activity

Information Seeking Behavior and Technology Adoption: Theories and Trends Al-Suqri, Mohammed Nasser, Al-Aufi, Ali Saif, 2015-02-28 With the increasingly complex and ubiquitous data available through modern technology digital information is being utilized daily by academics and professionals of all disciplines and career paths Information Seeking Behavior and Technology Adoption Theories and Trends brings together the many theories and meta theories that make information science relevant across different disciplines Highlighting theories that had their base in the early days of text based information and expanding to the digitization of the Internet this book is an essential reference source for those involved in the education and training of the next generation of information science professionals as well as those who are currently working on the design and development of our current information products systems and services

Annual Review of Information Science & Technology Blaise Cronin, 2006-10 ARIST published annually since 1966 is a landmark publication within the information science community It surveys the landscape of information science and technology providing an analytical authoritative and accessible overview of recent trends and significant developments The range of topics varies considerably reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives While ARIST continues to cover key topics associated with classical information science e g bibliometrics information retrieval editor Blaise Cronin is selectively expanding its footprint in an effort to connect information science more tightly

with cognate academic and professional communities *Lectures on Information Retrieval* Maristella Agosti, Fabio Crestani, Gabriella Pasi, 2003-05-15 Information Retrieval IR is concerned with the effective and efficient retrieval of information based on its semantic content The central problem in IR is the quest to find the set of relevant documents among a large collection containing the information sought satisfying a user's information need usually expressed in a natural language query Documents may be objects or items in any medium text image audio or indeed a mixture of all three This book presents 12 revised lectures given at the Third European Summer School in Information Retrieval ESSIR 2000 held at the Villa Monastero Varenna Italy in September 2000 The first part of the book is devoted to the foundation of IR and related areas the second part on advanced topics addresses various current issues from usability aspects to Web searching and browsing **Information Context: Nature, Impact, and Role** Fabio Crestani, Ian Ruthven, 2005-05-20 CoLIS 5 was the fifth in the series of international conferences whose general aim is to provide a broad forum for critically exploring and analyzing research in areas such as computer science information science and library science CoLIS examines the historical theoretical empirical and technical issues relating to our understanding and use of information promoting an interdisciplinary approach to research CoLIS seeks to provide a broad platform for the examination of context as it relates to our theoretical empirical and technical development of information centered disciplines The theme for CoLIS 5 was the nature impact and role of context within information centered research Context is a complex dynamic and multi dimensional concept that influences both humans and machines how they behave individually and how they interact with each other In CoLIS 5 we took an interdisciplinary approach to the issue of context to help us understand and the theoretical approaches to modelling and understanding context incorporate contextual reasoning within technology and develop a shared framework for promoting the exploration of context **Annual Review of Information Science and Technology** Blaise Cronin, 2007 ARIST published annually since 1966 is a landmark publication within the information science community It surveys the landscape of information science and technology providing an analytical authoritative and accessible overview of recent trends and significant developments The range of topics varies considerably reflecting the dynamism of the discipline and the diversity of theoretical and applied perspectives While ARIST continues to cover key topics associated with classical information science e.g. bibliometrics information retrieval editor Blaise Cronin is selectively expanding its footprint in an effort to connect information science more tightly with cognate academic and professional communities **Information Science in Transition** Alan Gilchrist, 2009 Are we at a turning point in digital information The expansion of the internet was unprecedented search engines dealt with it in the only way possible scan as much as they could and throw it all into an inverted index But now search engines are beginning to experiment with deep web searching and attention to taxonomies and the Semantic Web is demonstrating how much more can be done with a computer if you give it knowledge What does this mean for the skills and focus of the information science or sciences community Should information designers and information managers work more

closely to create computer based information systems for more effective retrieval Will information science become part of computer science and does the rise of the term informatics demonstrate the convergence of information science and information technology a convergence that must surely develop in the years to come Issues and questions such as these are reflected in this monograph a collection of essays written by some of the most pre eminent contributors to the discipline These peer reviewed perspectives capture insights into advances in and facets of information science a profession in transition With an introduction from Jack Meadows the key papers are Meeting the challenge by Brian Vickery The developing foundations of information science by David Bawden The last 50 years of knowledge organization by Stella G Dextre Clarke On the history of evaluation in IR by Stephen Robertson The information user by Tom Wilson The sociological turn in information science by Blaise Cronin From chemical documentation to chemoinformatics by Peter Willett Health informatics by Peter A Bath Social informatics and sociotechnical research by Elisabeth Davenport The evolution of visual information retrieval by Peter Enser Information policies by Elizabeth Orna Disparity in professional qualifications and progress in information handling by Barry Mahon Electronic scholarly publishing and open access by Charles Oppenheim Social software fun and games or business tools by Wendy A Warr Bibliometrics to webometrics by Mike Thelwall This monograph previously appeared as a special issue of the Journal of Information Science published by Sage Readership Reproduced here as a monograph this important collection of perspectives on a skill in transition from a prestigious line up of authors will now be available to information studies students worldwide and to all those working in the information science field

Metadata for Transmedia Resources Ana Vukadin, 2019-07-13 Transmedia is a technique of delivering a single piece of content in individual parts via different media and communication platforms books films TV shows games live performances etc In the book transmedia is considered as a case in point for the need to rethink library cataloguing and metadata practices in a new heterogeneous information environment where the ability to bring together information from various sources into a

meaningful whole becomes a critical information skill Transmedia sheds new light on some of the long existing questions of bibliographic information organisation the definition of work modelling of bibliographic relationships subject analysis of fiction etc and introduces libraries to new transient and interactive media forms such as interactive fiction gaming events or performances The book investigates how various theories and practices of bibliographic information organisation can be applied to transmedia focusing on the solutions provided by the new bibliographic conceptual model IFLA LRM as well as linked open data models and standards It strongly advocates collaborative practices and reuse of knowledge that underpin an emerging vision of the library catalogue as a mediation tool that assembles links and integrates information across a variety of communication contexts Explores transmedia from the point of view of information organisation Presents one of the first extensive analyses of the IFLA LRM bibliographic conceptual model Uses examples of recent publishing practices to assess current bibliographic data models standards formats and technologies

Theories of Information, Communication and Knowledge Fidelia Ibekwe-SanJuan, Thomas M Dousa, 2013-08-30 This book addresses some of the key questions that scientists have been asking themselves for centuries what is knowledge What is information How do we know that we know something How do we construct meaning from the perceptions of things Although no consensus exists on a common definition of the concepts of information and communication few can reject the hypothesis that information whether perceived as object or as process is a pre condition for knowledge Epistemology is the study of how we know things anglophone meaning or the study of how scientific knowledge is arrived at and validated francophone conception To adopt an epistemological stance is to commit oneself to render an account of what constitutes knowledge or in procedural terms to render an account of when one can claim to know something An epistemological theory imposes constraints on the interpretation of human cognitive interaction with the world It goes without saying that different epistemological theories will have more or less restrictive criteria to distinguish what constitutes knowledge from what is not If information is a pre condition for knowledge acquisition giving an account of how knowledge is acquired should impact our comprehension of information and communication as concepts While a lot has been written on the definition of these concepts less research has attempted to establish explicit links between differing theoretical conceptions of these concepts and the underlying epistemological stances This is what this volume attempts to do It offers a multidisciplinary exploration of information and communication as perceived in different disciplines and how those perceptions affect theories of knowledge

The Future of Classification Rita Marcella, Arthur Maltby, 2017-03-02 Classification now has to encompass non physical media such as the Internet yet still ensure access to knowledge held in traditional physical forms on library shelves What does this mean for the future and can classification cope with the virtual library Written by a group of internationally known specialists this book reassesses traditional classification principles and the extent to which they provide the right basis for modern information storage and retrieval First posing the radical question of whether classification is still really necessary the book proceeds by

emphasizing the need for systematic knowledge organization with two chapters concentrating on classification in relation to IT and the Internet Later chapters re examine how present systems Dewey Decimal Classification Universal Decimal Classification and Library of Congress Classification are likely to adapt and provide a wealth of information sources for investigating the subject further The Future of Classification delves deep into what makes knowledge seeking successful Those studying information storage and retrieval and managers wanting to improve retrieval methods on which their service depends should read it

Responsible Librarianship David Bade, 2007 These papers examine library policies and organizational structures in light of the literature of ergonomics high reliability organizations joint cognitive systems and integrational linguistics Bade argues that many policies and structures have been designed and implemented on the basis of assumptions about technical possibilities ignoring entirely the political dimensions of local determination of goals and purposes as well as the lessons from ergonomics such as the recognition that people are the primary agents of reliability in all technical systems Because libraries are understood to be loci of human interaction and communication rather than purely technical systems at the disposal of an abstract user Bade insists on looking at problems of meaning and communication in the construction and use of the library catalog Looking at various policies for metadata creation and the results of those policies forces the question is there a responsible human being behind the library web site and catalog or have we abandoned the responsibilities of thinking and judgment in favor of procedures algorithms and machines

The Elements of Knowledge Organization Richard P. Smiraglia, 2014-09-02 The Elements of Knowledge Organization is a unique and original work introducing the fundamental concepts related to the field of Knowledge Organization KO There is no other book like it currently available The author begins the book with a comprehensive discussion of knowledge and its associated theories He then presents a thorough discussion of the philosophical underpinnings of knowledge organization The author walks the reader through the Knowledge Organization domain expanding the core topics of ontologies taxonomies classification metadata thesauri and domain analysis The author also presents the compelling challenges associated with the organization of knowledge This is the first book focused on the concepts and theories associated with KO domain Prior to this book individuals wishing to study Knowledge Organization in its broadest sense would generally collocate their own resources navigating the various methods and models and perhaps inadvertently excluding relevant materials This text cohesively links key and related KO material

and provides a deeper understanding of the domain in its broadest sense and with enough detail to truly investigate its many facets This book will be useful to both graduate and undergraduate students in the computer science and information science domains both as a text and as a reference book It will also be valuable to researchers and practitioners in the industry who are working on website development database administration data mining data warehousing and data for search engines The book is also beneficial to anyone interested in the concepts and theories associated with the organization of knowledge Dr Richard P Smiraglia is a world renowned author who is well published in the Knowledge Organization domain Dr Smiraglia is editor in chief of the journal Knowledge Organization published by Ergon Verlag of W rzburg He is a professor and member of the Information Organization Research Group at the School of Information Studies at University of Wisconsin Milwaukee

Visualizing the Semantic Web Vladimir Geroimenko, Chaomei Chen, 2013-06-29 Vladimir Geroimenko and Chaomei Chen The Semantic Web is a vision that has sparked a wide ranging enthusiasm for a new generation of the Web The Semantic Web is happening The central idea of this vision is to make the Web more understandable to computer programs so that people can make more use of this gigantic asset The use of metadata data about data can clearly indicate the meaning of data on the Web so as to provide computers with enough information to handle such data On the future Web many additional layers will be required if we want computer programs to handle the semantics the meaning of data properly without human intervention Such layers should deal with the hierarchical relationships between meanings their similarities and differences logical rules for making new inferences from the existing data and metadata etc Dozens of new technologies have emerged recently to implement these ideas XML eXtensible Markup Language forms the foundation of the future Web RDF Resource Description Framework Topic Maps and many other technologies help to erect a multi storey building of the Semantic Web layer by layer by adding new features and new types of metadata According to Tim Berners Lee the inventor of the current Web and the Semantic Web it may take up to ten years to complete the building The new Web will be much more complex than the current one and will contain enormous amounts of metadata as well as data Information Systems Christine Urquhart, Faten Hamad, Dina Tbaishat, Alison Yeoman, 2017-12-21 This new book takes a holistic view of information architecture to offer information professionals a vital critical analysis of library and information service architecture with discussion of methods tools techniques and trends The editors argue that library assessment literature has primarily dealt with performance measurement and change management strategies leaving little on the ways of looking at the process architecture of library and information services and on methods for business process analysis Information Systems Process and practice aims to fill that gap with a combination of theory and supporting case studies written by an international line up of contributors This book discusses research and methods that help libraries and information services work from strategic business objectives through to the organisation of processes that support the information services offered opens a new area of research investigation on the link between information behaviour research and information systems and architecture

illustrated by case studies and projects uses introductory sections and chapter commentary from the editors to draw the discussions together This will be essential reading for researchers in Information Science specifically in the areas of digital libraries information architecture and information systems It will also be useful for practitioners and students in these areas seeking to understand research issues and challenges and to discover how they have been handled in practice elsewhere
