Therefore, common readers can get some general information from different perspectives and professionals can have a detailed understanding of different arrangements and guiding principles. It is thus suitable for different readers. Yangtze River Economic Belt runs through the three regions of China, making a vital latitudinal axis whose coordinated and balanced development is of great strategic importance for promoting coordinated and shared development of the three regions and for the spatial balance of population, economy and the environment. The current imbalance between them, the absolute disparity in regional development, the obstruction in the flow of resource factors, the inequality in development opportunities, the incoordination between regional economic growth and the bearing capacity of resources and environment, the fragmentation of regional economic policies, all contribute to the insufficient utilization of the Golden Waterway problems numerous. How coordinated and balanced development can be realized within this economic belt is a prominent and pressing, even a severe problem.
