provides a concise and accessible guide for undergraduate students specializing in children and young people's nursing in the UK and further afield. Each chapter has been fully updated to reflect current knowledge and practice. The wide range of topics covered includes all the essentials such as contemporary child health policy and legal issues, knowledge and skills for practice and caring for children with special needs. Students will learn how to recognize the deteriorating child, use procedural play and distraction and consider the mental health of children and young people. A Textbook of Children's and Young People's Nursing is written by multidisciplinary experts rooted in child-centred healthcare within a family context and draws upon best contemporary practice. It is an invaluable resource that will help nursing students provide effective evidence-based care. Key points, summary boxes and clearly defined aims, objectives and learning outcomes to support learning. Conversation boxes to enliven the text. Patient scenarios to relate theory to practice. New chapters on skin health and the use of therapeutic play. Suggestions for seminar discussion topics to help teachers. Resource lists and online resources for further study or research. Online slides to complement chapters within book.

Perioperative Pain Control: Tools for Surgeons Peter F. Svider, Anna A. Pashkova, Andrew P. Johnson, 2021-01-21. According to the Centers for Disease Control and Prevention (CDC), there were nearly 40,000 opioid-related deaths in the U.S. in the last year alone. These numbers have increased considerably for a variety of reasons, and the growing role of prescription drug abuse has been widely recognized. There has also been increasing consciousness of the lack of dedicated and formalized training dedicated to prescription of analgesics, particularly among surgical trainees and practicing surgeons. Recent studies demonstrate that only a small minority of training programs mandates any opioid prescribing education, despite the fact that nearly all programs allow trainee prescription of opioids on an outpatient basis. Therefore, it is not surprising that despite a growing body of literature illustrating the value of opioid alternatives and adjuncts, practicing surgeons in all specialties largely ignore these evidence-based practices and continue to prescribe opioids in situations for which alternatives are proven safe and effective. There are many reasons for preparing a concise and practical resource describing evidence-based practices targeting surgeons and surgical subspecialists, including but not limited to:

1. The exponential increase in prescription drug abuse associated with the opioid epidemic, as surgeons play an important role in managing perioperative and chronic pain in a variety of practice settings; this issue bears importance from the patient, physician, and policymaker standpoint.
2. With increasing recognition of the role of quality improvement in patient safety initiatives and literature demonstrating inadequate opioid prescribing education, OPE in surgical training programs, it is only a matter of time before accreditation bodies including the ACGME incorporate strong recommendations and mandates for OPE.
3. Myriad literature demonstrating the existence of evidence-based alternatives to opioids. All surgeons and surgical subspecialists would benefit from a practical guide concisely laying this literature out. We feel that surgeons of all experience levels may benefit, ranging from the first-year surgical intern to an experienced practitioner trying to remain compliant with the evolving opioid regulatory environment. Hence, the appropriate target audience for this text would be for

the tens of thousands of current surgical trainees in many specialties including general surgery thoracic surgery otolaryngology plastic surgery urology gynecology vascular surgery neurosurgery and orthopedic surgery Furthermore surgeons out of training would be another audience of interest as there are increasing courses for continuing medical education based on perioperative and chronic pain management Currently there are no comparable and competitive guides with these target audiences all of the existing literature about perioperative and chronic pain is targeted either specifically for patients anesthesiologists or pain medicine physicians This will be the only up to date guide focusing on evidence based practices for perioperative pain control and each section will also include information on chronic pain sequelae relevant to each surgical specialty The editors envision this text being an interdisciplinary endeavor incorporating surgeons from multiple specialties anesthesiologists pain medicine physicians and palliative physicians as appropriate
