Cooper, 2025-09-17 Conventional aircraft today are propelled by the action of propellers or jets and powered by the internal combustion of petroleum fuels in piston turboprop or jet engines But other power sources powerplants and propulsion devices for airships as well as aircraft have been proposed and even experimented with over the last few centuries The power sources considered include human muscles steam batteries nuclear reactors and hydrogen fuel and the propulsion devices include sails oars flapping wings rockets and cycloidal propellers This meticulously researched book presents the history of these unconventional aerial power and propulsion systems explains the underlying science and

technology behind them and assesses the crucial question of practicality *The Routledge Handbook of Identity and the Environment in the Classical and Medieval Worlds* Rebecca Futo Kennedy, Molly Jones-Lewis, 2016-01-08 The Routledge Handbook of Identity and the Environment in the Classical and Medieval Worlds explores how environment was thought to shape ethnicity and identity discussing developments in early natural philosophy and historical ethnographies Defining environment broadly to include not only physical but also cultural environments natural and constructed the volume considers the multifarious ways in which environment was understood to shape the culture and physical characteristics of peoples as well as how the ancients manipulated their environments to achieve a desired identity This diverse collection includes studies not only of the Greco Roman world but also ancient China and the European Jewish and Arab inheritors and transmitters of classical thought In recent years work in this subject has been confined mostly to the discussion of texts that reflect an approach to the barbarian as other The Routledge Handbook of Identity and the Environment in the Classical and Medieval Worlds takes the discussion of ethnicity on a fresh course contextualising the concept of the barbarian within rational discourses such as cartography medicine and mathematical sciences an approach that allows us to more clearly discern the varied and nuanced approaches to ethnic identity which abounded in antiquity The innovative and thought provoking material in this volume realises new directions in the study of identity in the Classical and Medieval worlds

Caroline Bithell, Juniper Hill, 2014-06-26 Revival movements aim to revitalize traditions perceived as threatened or moribund by adapting them to new temporal spatial and social contexts While many of these movements have been well documented in Western Europe and North America those occurring and recurring elsewhere in the world have received little or no attention Particularly under analyzed are the aftermaths of revivals the new infrastructures musical styles performance practices subcultural communities and value systems that grow out of these movements The Oxford Handbook of Music Revival fills this gap and helps us achieve a deeper understanding of how and why musical pasts are reimagined and transfigured in modern day postindustrial postcolonial and postwar contexts The book s thirty chapters present innovative theoretical perspectives illustrated through new ethnographic case studies on diverse music and dance cultures around the world Together these essays reveal the potency of acts of revival resurgence restoration and renewal in shaping musical landscapes and transforming social experience The book makes a powerful argument for the untapped potential of revival as a productive analytical tool in contemporary global contexts With its detailed treatment of authenticity recontextualization transmission institutionalization globalization the significance of history and other key concerns the collection engages with critical issues far beyond the field of revival studies and is crucial for understanding contemporary manifestations of folk traditional and heritage music in today s postmodern cosmopolitan societies
