Ocean World Norifumi Daito,2024-07-11 Tracing the history of the sugar trade and its consumption in the Persian Gulf
during the 18th century this book explores the interplay of social economic and political interests created by this popular
commodity The study of sugar has until now focused mainly on its significant growth in European markets from the mid 17th
century and more recently parallel developments in East Asia In this book Daito shows how the sugar trade also developed in
and became important to the Indian Ocean World Studying how the consumption of sugar wavered after the brutal overthrow
of the Safavid dynasty in 1722 this book shows how the Dutch East India Company and the trading network responded to
political upheavals in the region and consequently the changing trading conditions Arguing that sugar continued to be
imported and consumed despite these political disturbances Sugar and the Indian Ocean World proves this was not a period
of economic stagnation for the region and shows how sugar became an important intersection between socio cultural
practices and the Indian Ocean economy **Sensitivity of Mangrove Ecosystem to Changing Climate** Abhijit
Mitra,2013-08-13 Mangroves are basically salt tolerant forest ecosystems found mainly in tropical and sub tropical inter tidal
regions Till about 1960s mangroves were largely viewed as economically unproductive areas and were therefore destroyed
for reclaiming land for various economic and commercial activities Gradually with the passage of time the economic and
ecological benefits of mangroves have become visible and their importance is now well appreciated Today mangroves are
observed in about 30 countries in tropical subtropical regions covering an area of about 99 300 Sq Km However during the
past 50 years over 50% of the mangrove cover has been lost mainly because of the increased pressure of human activities
like shrimp farming and agriculture forestry salt extraction urban development tourist development and infrastructure Also
dam on rivers contamination of sea waters caused by heavy metals oil spills pesticides and other products etc have been
found to be responsible for the decline of mangroves Although the temperature effect on growth and species diversity is not
known sea level rise may pose a serious threat to these ecosystems The present book addresses all these important issues in
separate chapters with some interesting case studies whose data may serve as pathfinder for future researches in the sphere

of the influence of climate change on mangrove ecosystem The role of mangroves in the sector of bioremediation is a unique feather in the crown of this coastal and brackishwater vegetation that may be taken up by the coastal industries in order to maintain the health of ambient environment This book seeks to discover and to assess the vulnerability of climate change on mangrove flora and fauna their role in carbon sequestration and some interesting case studies by some groups of dedicated researchers that may serve as the basis of future climate related policies *Arsip Koran Banjarmasin Post Tgl 09 April 2012*
