**Handbook of Univariate and Multivariate Data Analysis with IBM SPSS, Second Edition** Robert Ho, 2013-10-25 Using the same accessible hands on approach as its best selling predecessor the Handbook of Univariate and Multivariate Data Analysis with IBM SPSS Second Edition explains how to apply statistical tests to experimental findings identify the assumptions underlying the tests and interpret the findings This second edition now covers more topics and has been updated with the SPSS statistical package for Windows New to the Second Edition Three new chapters on multiple discriminant analysis logistic regression and canonical correlation New section on how to deal with missing data Coverage of tests of assumptions such as linearity outliers normality homogeneity of variance covariance matrices and multicollinearity Discussions of the calculation of Type I error and the procedure for testing statistical significance between two correlation coefficients obtained from two samples Expanded coverage of factor analysis path analysis test of the mediation hypothesis and structural equation modeling Suitable for both newcomers and seasoned researchers in the social sciences the handbook offers a clear guide to selecting the right statistical test executing a wide range of univariate and multivariate statistical tests via the Windows and syntax methods and interpreting the output results The SPSS syntax files used for executing the statistical tests can be found in the appendix Data sets employed in the examples are available on the book's CRC Press web page

**Himalayan Quality of Life** Benjamin L. Saitluanga, 2017-04-18 The book is a study of intra urban inequality in quality of life QOL in Aizawl city The main objectives of the study include analysis of processes and patterns of social differentiation along the three dimensional space of Aizawl city as well as analysis of spatial inequality in QOL at the lowest administrative structure of the city An investigation into spatial pattern of residential differentiation was done at both horizontal and vertical spaces Spatial variation in well being of residents of Aizawl city and the quality of their immediate environment was also studied by taking both objective and subjective indicators The study employed a number of descriptive inferential and multivariate statistical techniques including correlation factor analysis principal component analysis cluster analysis and spatial autocorrelation methods like Moran's I and Local Indicators of Spatial Association LISA Mapping techniques and graphical methods like Choropleth map histogram and line graph were also used With the help of factor analysis the social space of Aizawl city was found to be differentiated along socio economic status family status household size status workers status and ethnic status The most important factor determining residential differentiation was socio economic status Choropleth map of factor scores reveals that the inner city localities were dominated by high socio economic class while poorer people dominated the

peripheries Non local ethnic minorities were few but concentrated in some adjoining peripheral localities as well as in inner city localities which have been inhabited by their ancestors since the colonial period Vertical pattern of residential differentiation was also analyzed by taking income variable as a proxy of socio economic status Multi storey buildings in Aizawl city were co inhabited by both richer people and poorer people The richer people were found at the top floors while the poorer people occupied the basement floors Normally the owners of the buildings were found at the top floors while the basement floors were dominated by the renters Spatial variation in QOL was measured with the help of principal component analysis as a weighting technique by taking variables pertaining to both objective and subjective QOL dimensions The values of composite QOL index showed that the central localities have scored better than their peripheral counterparts Correlation analysis of the relationship between objective indicators and subjective indicators provided a low positive value indicating the absence of relationship between the two dimensions of quality of life Spatial autocorrelation analysis was also performed to see the pattern of clustering of spatially weighted QOL variables across Local Councils With the help of Global Moran's I spatial clusters and spatial outliers were observed for objective dimension of QOL within the study area The value of Moran's I was found to be insignificant for subjective QOL dimension indicating the absence of significant pattern of clustering The study also identified 7 social areas of Aizawl city on the basis of factor scores and composite scores of QOL variables calculated for all Local Councils The identification of clusters was taken out with the help of hierarchical clustering method of cluster analysis These clusters were labeled appropriate names and their characteristics were described in detail The thesis concluded with recommendation of designating these social areas as social development planning zones for obtaining inclusive development

The Essence of Multivariate Thinking Lisa L. Harlow, 2014-02-18 By focusing on underlying themes this book helps readers better understand the connections between multivariate methods For each method the author highlights the similarities and differences between the methods when they are used and the questions they address the key assumptions and equations and how to interpret the results The concepts take center stage while formulas are kept to a minimum Examples using the same data set give readers continuity so they can more easily apply the concepts Each method is also accompanied by a worked out example SPSS and SAS input and an example of how to write up the results EQS code is used for the book s SEM applications This extensively revised edition features New SEM chapters including an introduction ch 10 path analysis ch 11 confirmatory factor analysis ch 12 and latent variable modeling ch 13 the last three with an EQS application A new chapter on multilevel modeling ch 8 that is now used more frequently in the social sciences More emphasis on significance tests effect sizes and confidence intervals to encourage readers to adopt a thorough approach to assessing the magnitude of their findings A new data set that explores the work environment More discussion about the basic assumptions and equations for each method for a more accessible approach New examples that help clarify the distinctions between methods A new website at <https://sites.google.com/site/multivariatesecondedition> that features the datasets for all of the examples in the book for use in both SPSS and SAS and in EQS for the SEM chapters The first two chapters review the core themes that run through most multivariate methods The author shows how understanding multivariate methods is much more achievable when we notice the themes that underlie these statistical techniques This multiple level approach also provides greater reliability and validity

in our research After providing insight into the core themes the author illustrates them as they apply to the most popular multivariate methods used in the social and behavioral sciences First two intermediate methods are explored multiple regression and analysis of covariance Next the multivariate grouping variable methods of multivariate analysis of variance discriminant function analysis and logistic regression are explored Next the themes are applied to multivariate modeling methods including multilevel modeling path analysis confirmatory factor analysis and latent variable models that include exploratory structural methods of principal component and factor analysis The book concludes with a summary of the common themes and how they pertain to each method discussed in this book Intended for advanced undergraduate and or graduate courses in multivariate statistics taught in psychology education human development business nursing and other social and life sciences researchers also appreciate this book s applied approach Knowledge of basic statistics research methods basic algebra and finite mathematics is recommended

management abilities Educational organizations need to shape their organizational culture climate and psychology to support their leaders in efficiently managing their employees emotions Up to now this topic has been usually addressed as the main catalyst and a sub dimension of emotional intelligence Moreover current evidence classifies social and empathy skills as other sub dimensions of emotional intelligence For this reason this collection of peer reviewed articles will draw attention to the contemporary term emotional management and contribute to educational fields by means of exploring the relationship between emotions and leadership
