This book offers the reader a comprehensive understanding and the multitude of methods utilized in the research of urban mobilities, with cities and the urban as its pivotal axis. It covers theories and concepts for scholars and researchers to understand, observe, and analyse the world of urban mobilities. The *Handbook of Urban Mobilities* facilitates the understanding of urban mobilities within a historic conscience of societal transformation. It explores key concepts and theories within the mobilities turn with a particular urban framework as well as the methods and tools at play when empirical urban mobilities research is undertaken. This book also explores the urban mobilities practices related to commutes, particular modes of moving, the exploration of everyday life, and embodied practices as they manifest themselves within urban mobilities and the themes of power, conflict, and social exclusion. A discussion of urban planning, public control, and governance is also undertaken in the book, wherein the themes of infrastructures, technologies, and design are duly considered. With chapters written in an accessible style, this handbook carries timely

contributions within the contemporary state of the art of urban mobilities research It will thus be useful for academics and students of graduate programmes and post graduate studies within disciplines such as urban geography political science sociology anthropology urban planning traffic and transportation planning and architecture and urban design How do biogas solutions influence the sustainability of bio-based industrial systems? Linda Hagman,2018-11-26 Biomass is a valuable and limited resource that should be used efficiently The potential of replacing fossil based products with bio based ones produced in biobased industrial systems is huge One important aim of increasing the share of biobased products is to improve the sustainability of systems for production and consumption Therefore it is important to evaluate what solutions are available to improve the sustainability performance of bio based industrial systems and if they also bring negative impacts The thesis focuses on assessing the role of biogas solutions in developing sustainable bio based systems Such assessments are often quite narrow in their scope and focus on quantitative environmental or economic aspects This thesis aims at also including feasibility related aspects involving the contextual conditions that are assessed more qualitatively Biogas solutions are identified as a versatile approach to treat organic materials which are generated in large volumes in bio based industrial systems The results show that biogas solutions in bio based industrial systems i improve circular flows of energy and nutrients ii are especially viable alternatives when the quality of the by product streams become poorer and iii may improve the profitability of the bio based industrial system To perform better assessments of these systems it seems valuable to broaden the set of indicators assessed and include feasibility related indicators preferably through the involvement of relevant stakeholders as they contribute with different perspectives and can identify aspects that influence the sustainability in different areas Future studies could benefit from applying those broader assessments on more cases to build on a more generalisable knowledge base Energy Efficiency and Renewable Energy Handbook D. Sustainable Energy for All David Ockwell, Rob Byrne, 2016-08-19. Despite decades of effort and billions of dollars spent, two thirds of people in sub-Saharan Africa still lack access to electricity, a vital precursor to economic development and poverty reduction. Ambitious international policy commitments seek to address this, but scholarship has failed to keep pace with policy ambitions, lacking both the empirical basis and the theoretical perspective to inform such transformative policy aims. *Sustainable Energy for All* aims to fill this gap. Through detailed historical analysis of the Kenyan solar PV market, the book demonstrates the value of a new theoretical perspective based on Socio-Technical Innovation System Building. Importantly, the book goes beyond a purely academic critique to detail exactly how a Socio-Technical Innovation System Building approach might be operationalized in practice, facilitating both a detailed plan for future comparative research as well as a clear agenda for policy and practice. Chapters 1 and 6 of this book are freely available as downloadable Open Access PDFs at <http://www.taylorfrancis.com> under a Creative Commons Attribution (CC BY) 4.0 license.
