Methods to investigate the hydrology of the Himalayan springs Chinnasamy, Pennan, Prathapar, Sanmugam A., 2016-06-10 Springs are the major source of freshwater in many small mountainous watersheds within the Himalayan region. In recent years their flow rates have diminished but the reasons for this are not self-evident and hence this paper reviews the methods to investigate Himalayan springs. The review reveals that chemical and isotope analyses, mostly water dating and stable isotope e.g. $\delta^{18}\text{O}$ analyses, could be an appropriate entry point to commence field investigations because of their potential to map complex spring pathways including linkages between aquifers. This should be combined with the building of hydrogeological maps with the available data. Output from desktop analyses, field investigations and hydrogeological maps could then contribute to the establishment of a conceptual model which could form the basis for a numerical model.

Threats to Springs in a Changing World Matthew J. Currell, Brian G. Katz, 2022-12-08 Documents the declining quality and quantity of springs around the world and efforts to preserve, protect and restore them. Anthropogenic causes including climate change have been degrading springs around the world. Changes in spring water quality and flow impact human health, cultural values, ecology and livelihoods. Threats to Springs in a Changing World: Science and Policies for Protection presents a range of international studies illustrating the causes of spring degradation and strategies being used to safeguard springs both now and for the future. Volume highlights include: Examples of threatened springs in diverse hydrogeologic settings; Innovative methods and tools for understanding the hydrogeology of spring systems; Current policy and governance approaches for alleviating damage to springs; Different approaches to management of springs; A call for practitioners, policy makers, scientists and the public to work together. The American Geophysical Union promotes discovery in Earth and space science for the benefit of humanity. Its publications disseminate scientific knowledge and provide resources for researchers, students and professionals. The audience for this book is researchers, educators and natural resource managers working to conserve dug pits, trenches and shallow bores. In doing so, it extends the reach of the book, but readers should also be prepared to encounter discussions of features and environments that differ from their own conceptualization of a spring.

Small Water Bodies of the Western Balkans Vladimir Pešić, Djuradj Milošević, Marko Miliša, 2021-11-18 The small water bodies such as headwater streams, springs, ditches, small lakes and ponds are critical to maintaining freshwater biodiversity. This is especially true for Dinaric karst where they are often the only water bodies present. However, despite their importance, they remain widely overlooked and excluded from government policies like the EU Water Framework Directive. This book includes information on different aspects of these essential but still neglected habitats. This book intends to be of interest to a wide range of audiences from researchers and conservationists to the public and decision makers.

Groundwater Environment in Asian Cities Sangam Shrestha, Vishnu Prasad Pandey, Shashidhar Thatikonda, Binaya Raj Shivakoti, 2016-02-11 Groundwater contributes to the sustainable development of many Asian cities by providing water for domestic, industrial and agricultural uses and regulating ecosystem flows. However, groundwater has not always been properly managed, which often has resulted in depletion and degradation of the resource. **Groundwater Environment in Asian Cities** presents the up to date scientific knowledge on groundwater environment in fourteen Asian cities using the Driver-Pressure-State-Impact-Response (DPSIR) framework. In detail, the book presents the facts and figures of groundwater dependency, problems related to groundwater over exploitation, implementation of various policy instruments and management practices and their results in selected fourteen Asian cities: namely Bandung (Indonesia), Bangkok (Thailand), Beijing (China), Bishkek (Kyrgyzstan), Chitwan (Nepal), Delhi (India), Dili (East Timor), Ho Chi Minh (Vietnam), Hyderabad (India), Khulna (Bangladesh), Lahore (Pakistan), Seoul (South Korea), Tokyo (Japan) and Yangon (Myanmar).
