The Traveling Salesman Gerhard Reinelt, 2003-08-02 Still today I am receiving requests for reprints of the book but unfortunately it is out of print Therefore since the book still seems to receive some attention I proposed to Springer Verlag to provide a free online edition I am very happy that Springer agreed Except for the correction of some typographical errors the online edition is just a copy of the printed version no updates have been made In particular Table 13.1 gives the status of TSPLIB at the time of publishing the book For accessing TSPLIB the link <http://www.iwr.uni-heidelberg.de/iwr/comopt/software/TSPLIB95> should be used instead of following the procedure described in Chapter 13 Heidelberg January 2001 Gerhard Reinelt Preface More than fifteen years ago I was faced with the following problem in an assignment for a class in computer science A brewery had to deliver beer to various stores and the task was to write a computer program for determining the shortest route for the truck driver to visit all stores and return to the brewery All my attempts to find a reasonable algorithm failed I could not help enumerating all possible routes and then select the best one

Integer Programming is one of the most fascinating and difficult areas in the field of Mathematical Optimization Due to this fact notable research contributions to Integer Programming have been made in very different branches of mathematics and its applications Since these publications are scattered over many journals proceedings volumes monographs and working papers a comprehensive bibliography of all these sources is a helpful tool even for specialists in this field I initiated this compilation of literature in 1970 at the Institut für Konometrie und Operations Research University of Bonn Since then many collaborators have contributed to and worked on it Among them Dipl. Math. Claus Kastning has done the bulk of the work With great perseverance and diligence he has gathered all the material and checked it with the original sources The main aim was to incorporate rare and not easily accessible sources like Russian journals preprints or unpublished papers Without the invaluable and dedicated engagement of Claus Kastning the bibliography would never have reached this final version For this reason he must be considered its responsible editor As with any other collection this literature list has a subjective viewpoint and may be in some sense incomplete We have however tried to be as complete as possible The bibliography contains 4704 different publications by 6767 authors which were classified by 11839 descriptor entries Operations

Research and Artificial Intelligence: The Integration of Problem-Solving Strategies Donald E. Brown, Chelsea C. White III, 2012-12-06 The purpose of this book is to introduce and explain research at the boundary between two fields that view problem solving from different perspectives Researchers in operations research and artificial intelligence have traditionally remained separate in their activities Recently there has been an explosion of work at the border of the two fields as members of both communities seek to leverage their activities and resolve problems that remain intractable to pure operations research or artificial intelligence techniques This book presents representative results from this current flurry of activity and provides insights into promising directions for continued exploration This book should be of special interest to researchers in artificial intelligence and operations research because it exposes a number of applications and techniques which have benefited from the integration of problem solving strategies Even researchers working on different applications or with different techniques can benefit from the descriptions contained here because they provide insight into effective methods for combining approaches from the two fields Additionally researchers in both communities will find a wealth of pointers to challenging new problems and potential opportunities that exist at the interface between operations research and artificial intelligence In addition to the obvious interest the book should have for members of the operations research and artificial intelligence communities the papers here are also relevant to members of other research communities and development activities that can benefit from improvements to fundamental problem solving approaches
