Great Auk Islands A Field Biologist In The Arctic Tim Birkhead:

Great Auk Islands; a field biologist in the Arctic Tim Birkhead, 2010-10-30 The story of the author's research expeditions in the Canadian Arctic this book is for professional and amateur ornithologists students in ecology and animal behaviour The Arctic is one of the world's last great wildernesses a place of outstanding beauty history and extraordinary wildlife in which seabirds form an important component of a rich marine environment Like many other remote regions it is under threat from human activities but to protect it we need to understand it That understanding can come only through scientific research and the central threat of this book is to examine how such research is actually done It describes the business of conducting biological studies on seabirds in remote parts of eastern Canada Several themes are engagingly interwoven the sheer beauty of the Arctic environment the intriguing biology of its wildlife and the discovery and exploitation of enormous seabird colonies including the destruction of the Great Auk Tim Birkhead describes in personal detail the different facets of research and brings to life both the difficulties and the excitement of working in the Arctic What is it like setting up a camp for four months on a remote and uninhabited island not far from the North Pole How does it feel to commute daily by inflatable boat amidst icebergs to study areas located on towering cliffs set between ice blue glaciers What do you do when a Polar bear decides that you have invaded its Arctic home Why are the seabird colonies in the high Arctic so enormous What do we know about lifestyle of the extinct Great Auk In 1992 Canada's legendary cod fishery was finally destroyed what are the consequences of this for other wildlife These are just a few of the questions dealt with in this book Our future as a species depends upon science and the understanding it brings of the world we live in The work of scientists often appears obscure but in this book Tim Birkhead has used his experience of seven summers in the Arctic to write an accessible and straightforward account of how research is actually done in the field The text is enriched by David Quinn's illustrations and by numerous photographs in both black and white and colour

Bloomsbury Publishing **The Last of Its Kind** Gísli Pálsson, 2024-02-06 Shortlisted for the Royal Society Trivedi Science Book Prize How an iconic bird's final days exposed the reality of human caused extinction The great auk is one of the most tragic and documented examples of extinction A flightless bird that bred primarily on the remote islands of the North Atlantic the last of its kind were killed in Iceland in 1844 Gísli Pálsson draws on firsthand accounts from the Icelanders who hunted the last great auks to bring to life a bygone age of Victorian scientific exploration while offering vital insights into the extinction of species Pálsson vividly recounts how British ornithologists John Wolley and Alfred Newton set out for Iceland to collect specimens only to discover that the great auks were already gone At the time the Victorian world viewed extinction as an impossibility or trivialized it as a natural phenomenon Pálsson chronicles how Wolley and Newton documented the fate of the last birds through interviews with the men who killed them and how the naturalists' Icelandic journey opened their eyes to the disappearance of species as a subject of scientific concern and as something that could be caused by humans Blending a richly evocative narrative with rare unpublished material as well as insights from ornithology anthropology and Pálsson's own North Atlantic travels **The Last of Its Kind** reveals how the saga of the great auk opens a window onto the human causes of mass extinction

Cuckoos, Cowbirds and Other Cheats Nick Davies, 2010-09-30 This fascinating study describes the natural histories of these brood parasites and examines many of the exciting questions they raise about the evolution of cheating and the arms race between parasites and their prey Brood parasites fill their armoury with adaptations including exquisite egg mimicry rapid laying ejection of host eggs murder of host young chick mimicry and manipulative begging behaviour plays shown by recent research to have evolved in response to host defence behaviour or through competition among the parasites themselves While many host species appear defenceless accepting parasite eggs quite unlike their own many are more discriminating against odd looking eggs and some have evolved the ability to discriminate against odd looking chicks as well How is this arms race conducted Will defenceless hosts develop defences in time or are there constraints which limit the evolution and perfection of host defences And why are so few species obliged only to lay eggs in host nests Have host defences limited the success of brood parasitism or is it in fact much more common than we suspect but occurring mainly when birds parasitize the nest of their own kind All of these puzzles are examined in descriptions of the natural

history of each of the groups of parasites in turn Here is a book with wide appeal both to amateur naturalists fascinated by this most singular and macabre of behaviours and by ornithologists and ecologists interested in the evolution of ecology and behaviour The story takes us from the classic field work by pioneer ornithologists such as Edgar Chance Stuart Baker Herbert Friedmann and others through to the experimental field work and molecular techniques of today s leading scientists We visit brood parasites in Europe Asia Japan Africa Australasia and North and South America to look at some of the world s most interesting birds and some of biology s most interesting questions many of which still beg answers from ornithologists in the future Brilliant illustrations by David Quinn illuminate the species discussed showing many behaviours never before illustrated and conveying the thrill of watching these astonishing birds in the wild Hope Is the Thing With Feathers Christopher Cokinos,2009-05-14 A prizewinning poet and nature writer weaves together natural history biology sociology and personal narrative to tell the story of the lives habitats and deaths of six extinct bird species The Most Perfect Thing Tim Birkhead,2016-04-12 A bird s egg is a nearly perfect survival capsule an external womb and one of natural selection s most wonderful creations Shortlisted for the Royal Society Insight Investment Science Book Prize 2016 One of Forbes Best Books About Birds and Birding in 2016 Renowned ornithologist Tim Birkhead opens this gripping story as a female guillemot chick hatches already carrying her full quota of tiny eggs within her undeveloped ovary As she grows into adulthood only a few of her eggs mature are released into the oviduct and are fertilized by sperm stored from copulation that took place days or weeks earlier Within a matter of hours the fragile yolk is surrounded by albumen and the whole is gradually encased within a turquoise jewel of a shell Soon the fully formed egg is expelled onto a rocky ledge where it will be incubated for four weeks before a chick emerges and the life cycle begins again THE MOST PERFECT THING is about how eggs in general are made fertilized developed and hatched Birkhead uses birds eggs as wondrous portals into natural history enlivened by the stories of naturalists and scientists including Birkhead and his students whose discoveries have advanced current scientific knowledge of reproduction *A Natural History of Parenting* Susan Allport,2016-06-28 Anyone who has ever held a baby or observed a nesting bird will find much to inform and entertain in this enchantingly written and thoroughly researched book Allport revels in the marvelous diversity of care in the animal world She shows us our place in that world with great humor knowledge and common sense **Animals, Plants and Afterimages** Valérie Bienvenue,Nicholas Chare,2022-03-11 The sixth mass extinction or Anthropocene extinction is one of the most pervasive issues of our time Animals Plants and Afterimages brings together leading scholars in the humanities and life sciences to explore how extinct species are represented in art and visual culture with a special emphasis on museums Engaging with celebrated cases of vanished species such as the quagga and the thylacine as well as less well known examples of animals and plants these essays explore how representations of recent and ancient extinctions help advance scientific understanding and speak to contemporary ecological and environmental concerns **Birdwatch** ,1993 The Emu ,1995 *New Scientist and Science Journal*
