Brute Force Dominic Lennard,2019-11-01 Considers how dangerous beasts in horror films illuminate the human animal relationship It's always been a wild world with humans telling stories of killer animals as soon as they could tell stories at all Movies are an especially popular vehicle for our fascination with fierce creatures In Brute Force Dominic Lennard takes a close look at a range of cinematic animal attackers including killer gorillas sharks snakes bears wolves spiders and even a few dinosaurs Lennard argues that animal horror is not so much a focused genre as it is an impulse tapping into age-old fears of becoming prey At the same time these films expose conflicts and uncertainties in our current relationship with animals Movies considered include King Kong Jaws The Grey Them Arachnophobia Jurassic Park Snakes on a Plane An American Werewolf in London and many more Drawing on insights from film studies art history cognitive science and evolutionary psychology Brute Force is an engaging critical exploration and appreciation of cinema's many bad beasts The brilliance of Dominic Lennard's Brute Force is not only that it is long overdue but one didn't realize it was due in the first place Yet upon reflection and of course through Lennard's engaging book one realizes not only the ubiquity of animals in horror but their utter centrality to so many classic horror films In reading this we can hear the distant rumble of footsteps of a genetically reborn Tyrannosaurus or the hurried pounding of our beloved Rover who has decided that he wants more than kibbles and bits for dinner and we look mighty appetizing Groundbreaking is often overused but in this case it truly fits David Desser coeditor of Tough Ain't Enough New Perspectives on the Films of Clint Eastwood

Sharks: Conservation, Governance and Management Erika J. Techera, Natalie Klein, 2014-06-05 The key aim of this book is to explore the global conservation and management of sharks There has been a rapid decline in populations of many shark species while new science has emerged of the critical role they play in marine ecosystems However the authors show that conservation law and policy have been slow to develop with only a small number of iconic species being protected worldwide The increase in fishing impact primarily through shark finning and by catch has led to shark conservation receiving greater international attention in recent years The book explores our current knowledge and status of the law and science in relation to sharks with a particular focus on improving frameworks for their conservation and management Recent trends are analysed including shark finning bans that have been put in place in several countries the widening number of nations establishing shark sanctuaries and the growth of shark based tourism The efficacy of current listing processes for endangered species and fisheries regulations is also examined Tourism is explored as an alternative to fishing and the risks and impacts associated with this industry are analysed Contributors include leading authorities from universities and conservation organizations in North America Europe and Australia A common theme is to emphasise the importance of collaborative governance between various interest groups and the need for inter disciplinary research and management approaches that are necessary to address the decline in sharks **Tropical Fish Hobbyist**, 2006 **One Story a Day**
