Mapping Disease Transmission Risk Enriching Models Using Biogeography And Ecology:

Mapping Disease Transmission Risk A. Townsend Peterson, 2014-11-26 This book illuminates new and more effective infectious disease mapping methods and integrates biogeographic and ecological factors with spatial models The author treats disease transmission areas for what they are distributions of species He argues that complex fragmented and highly irregular disease patterns can only be understood when underlying environmental drivers are considered The result is an modeling approach that challenges static spatial models and provides a framework for recasting disease mapping

Mapping Disease Transmission Risk A. Townsend Peterson, 2014-11-26 A revolutionary book that presents analytical tools for understanding why a particular disease is transmitted within a specific geographic area A Townsend Peterson one of the pioneers of ecological niche modeling presents a synthesis that illuminates new and more effective infectious disease mapping methods His work the culmination of twelve years of refinement breaks new ground by integrating biogeographic and ecological factors with spatial models Aimed at seasoned epidemiologists and public health experts this interdisciplinary book explains the conceptual and technical underpinnings of Peterson s approach while simultaneously describing the potentially enormous benefits of his modeling method Peterson treats disease transmission areas for what they are distributions of species The book argues that complex fragmented and highly irregular disease patterns can only be understood when underlying environmental drivers are considered The result is an elegant modeling approach that challenges static spatial models and provides a framework for recasting disease mapping Anyone working in the area of disease transmission particularly those employing predictive maps will find Peterson s book both inspiring and indispensable

Emerging Infectious Diseases , 2015-07 **Biogeography** Eric Guilbert, 2021-11-23 The recent progress in analytical methods aided by bringing in a wide range of other disciplines opens up the study to a broader field which means that biogeography now goes far beyond a simple description of the distribution of living species on Earth Originating with Alexander von Humboldt biogeography is a discipline in which ecologists and evolutionists aim to understand the way that living species are organized in connection with their environments Today as we face major challenges such as global warming massive species extinction and devastating pandemics biogeography offers hypotheses and explanations that may help to provide solutions This book presents as wide an overview as possible of the different fields that biogeography interacts with Sixteen authors from all over the world offer different approaches based on their specific areas of knowledge and experience thus we intend to illustrate the vast number of diverse aspects covered by biogeography Avian Malaria and Related Parasites in the Tropics Diego Santiago-Alarcon, Alfonso Marzal, 2020-10-19 The Tropics are home to the greatest biodiversity in the world but tropical species are at risk due to anthropogenic activities mainly land use change habitat loss invasive species and pathogens Over the past 20 years the avian malaria and related parasites Order Haemosporida systems have received increased attention in the tropical regions from a diverse array of research perspectives However to date no

attempts have been made to synthesize the available information and to propose new lines of research This book provides such a synthesis by not only focusing on the antagonistic interactions but also by providing conceptual chapters on topics going from avian haemosporidians life cycles and study techniques to chapters addressing current concepts on ecology and evolution For example a chapter synthesizing basic biogeography and ecological niche model concepts is presented followed by one on the island biogeography of avian haemosporidians Accordingly researchers and professionals interested in these antagonistic interaction systems will find both an overview of the field with special emphasis on the tropics and access to the necessary conceptual framework for various topics in ecology evolution and systematics Given its conceptual perspective the book will appeal not only to readers interested in avian haemosporidians but also to those more generally interested in the ecology evolution and systematics of host parasite interactions

Biodiversity and Health Serge Morand, Claire

Lajaunie, 2017-11-27 There is a gap between the ecology of health and the concepts supported by international initiatives such as EcoHealth One Health or Planetary Health a gap which this book aims to fill Global change is accelerated by problems of growing population industrialization and geopolitics and the world's biodiversity is suffering as a result which impacts both humans and animals However Biodiversity and Health offers the unique opportunity to demonstrate how ecological environmental medical and social sciences can contribute to the improvement of human health and wellbeing through the conservation of biodiversity and the services it brings to societies This book gives an expansive and integrated overview of the scientific disciplines that contribute to the connection between health and biodiversity from the evolutionary ecology of infectious and non infectious diseases to ethics law and politics Presents the first book to give a broad and integrated overview of the scientific disciplines that contribute to health From evolutionary ecology to laws and policies this book explores the links between health and biodiversity Demonstrates how ecological sciences environmental sciences medical sciences and social sciences may contribute to improve human health

Geospatial Technology for Human Well-Being and Health Fazlay S. Faruque, 2022-03-21 Over the last thirty years or so there have been tremendous advancements in the area of geospatial health however somehow two aspects have not received as much attention as they should have received These are a limitations of different spatial analytical tools and b progress in making geospatial environmental exposure data available for advanced health science research and for medical practice This edited volume addresses those two less explored areas of geospatial health with augmented discussions on the theories methodologies and limitations of contemporary geospatial technologies in a wide range of applications related to human well being and health In 20 chapters readers are presented with an up to date assessment of geospatial technologies with an emphasis on understanding general geospatial principles and methodologies that are often overlooked in the research literature As a result this book will be of interest to both newcomers and experts in geospatial analysis and will appeal to students and researchers engaged in studying human well being and health Chapters are presenting new concepts new analytical methods and contemporary applications within the framework of geospatial applications in human well being and health The topics addressed by the various chapter authors include analytical approaches newer areas of geospatial health application introduction to unique resources geospatial modeling and environmental pollution assessments for air water and soil Although geospatial experts are expected to be the primary readers this book is designed in such a way so that the public health professionals environmental health scientists and clinicians also find it useful with or without any familiarity with geospatial analysis

Applications of Novel Analytical Methods in Epidemiology Moh A. Alkhamis, Victoria J. Brookes, Kimberly VanderWaa, 2018-12-07 The repertoire of quantitative analytical techniques in disciplines such as ecology decision science and evolutionary biology has grown in part enabled by the development and increased availability of computational resources Integration of cutting edge quantitative tools into veterinary epidemiology that have been borrowed from such disciplines has offered opportunities to advance the study of disease dynamics in animal populations to improve and guide decision making related to disease prevention control or eradication Furthermore the need to explore new analytical methods for veterinary epidemiology has been driven by the

increasing availability and complexity of animal disease data The objective of this e book is to contribute to current methods in epidemiology by 1 presenting and discussing novel analytical tools that help advance our understanding of epidemiology and 2 demonstrating how inferences emerging from the application of novel analytical tools can be incorporated into decision making related to animal health The e book constitutes a collection of articles that explore the applications of a variety of analytical methods such as machine learning Bayesian risk assessment and an advanced form of social network analysis in the modern epidemiologic study of animal diseases

Advancements in Understanding Zoonotic Parasitic Diseases

Rodrigo Morchón García, Simona Gabrielli, Lavinia Ciuca, Elena Carreton, Ettore Napoli, 2025-01-27 This Research Topic is a continuation of the successful topic launched in Veterinary Infectious Diseases <https://www.frontiersin.org/research-topics/13197-zoonotic-diseases-their-hosts-and-vectors> The field of zoonotic parasitic diseases which can be transmitted between animals and humans is currently experiencing significant advancements These diseases caused by viruses bacteria parasites and fungi vary widely in their symptoms and severity with some leading to severe illness or death The transmission of these parasites can occur through various sources including food domestic and wild animals and vectors However the detection treatment and control of these diseases are often complicated by a lack of comprehensive knowledge about them This issue is further exacerbated by factors such as global warming which is leading to an exponential increase in many zoonotic diseases and the exchange of animals and people through travel or purchases which can introduce new vectors to previously disease free areas The primary aim of this research topic is to enhance our understanding of zoonotic parasitic diseases including those that have the potential to become zoonotic This includes gaining a deeper understanding of their biology epidemiology and the local regional country or global advances in their diagnosis treatment and control Additionally the research topic aims to facilitate the exchange of information about these diseases particularly in relation to their proteome immunome and molecular aspects as well as new vaccinal and diagnostic tools

Network-based Modeling for Risk Assessment of Infectious Disease

Transmission Md Mahbubul Huq Riad,2020 Infectious disease modeling is crucial to optimize surveillance preventative measures and resource allocation Simulation with infectious disease models is very convenient when the resource requirement for data collection and experimental studies are prohibitively high or even unethical A vast number of approaches have been proposed to model infectious disease transmission from different perspectives In this dissertation we investigate network based disease models for efficient resource allocation effective mitigation measures and accurate risk assessment We also investigate a filtering based parameter estimation and forecasting framework usable when proper incidence data is available First we provide a guideline for developing a network based model and simulation framework for any infectious diseases As an example we provide a step by step method for developing a spatially explicit model for infectious diseases with host demographic data We show how to devise effective mitigation strategies from simulation results using the spatially explicit model Our second contribution is developing a parameter estimation framework using a sequential Monte Carlo filter a compartmental disease model and historical incidence data Parameter estimation for any infectious disease model is crucial for accurately informing resource allocation and control measures Our method is particularly

important for its adaptability to the availability of new incidence data of any epidemic This parameter estimation framework is not limited to epidemic models rather it can be used for any systems with a state space model Third we propose an ensemble Kalman filter that provides dual state parameter estimates for infectious diseases As an online inferential method the ensemble Kalman Filter can perform real time forecast during an outbreak The framework is capable of accurate short to mid term forecasts Fourth we develop a risk assessment framework for infectious diseases with a comprehensive two layer network a permanent layer representing permanent contacts among individuals and a data driven layer for temporary contacts due to movements We combine the two layer network with a compartmental model and implement a Gillespie algorithm to identify the disease evolution and assess the spatial spreading risk The proposed risk assessment framework suggests some focal points spatial for disease preparedness providing critical directions to inform interventions in the field Finally we investigate the strong correlation of the arthropod abundance and host interaction with vector borne pathogen transmission and we developed a risk assessment framework using climate average temperature and rainfall and host demographic host density and movement data particularly suitable for regions with unreported or under reported incidence data This framework consisted of a spatiotemporal network based approach coupled with a compartmental disease model and a non homogeneous Gillespie algorithm We have identified the spatiotemporal suitability map the spatial risk map the significant incidence window and peak incidence period The outcomes of the framework comprise of weather dependent spatiotemporal suitability maps and probabilistic risk maps for spatial infection transmission This framework is capable of vector borne disease risk assessment without historical incidence data and can be a useful tool for preparedness with accurate human movement data
