Propellers and Propulsion Alfred Eckstein, 2016-08-01 Propulsion technology is a complex multidisciplinary topic with design construction operational and research implications A propeller is a rotating fan like structure which is used to propel the ship by using the power generated and transmitted by the main engine of the ship The transmitted power is converted from rotational motion to generate a thrust which imparts momentum to the water resulting in a force that acts on the ship and pushes it forward Using propulsion forces ships are able to manoeuvre themselves in the water Initially while there were limited number of ship propulsion systems in the present era there are several innovative ones with which a vessel can be fitted with Today ship propulsion is not just about successful movement of the ship in the water It also includes using the best mode of propulsion to ensure a better safety standard for the marine ecosystem along with cost efficiency *Marine Propellers and Propulsion* provides comprehensive and progressive coverage to furnish marine engineers naval architects and anyone involved in propulsion and hydrodynamics with the knowledge needed to do the job This book brings together a great range of knowledge on propulsion technology a multi disciplinary and international subject **The Screw Propeller** Albert E. Seaton, 2013-02 Albert Edward Seaton describes and discusses different methods and instruments for marine propulsion The focus is on the screw propeller Seaton gives an account of its history leading features forms and the materials used for it In addition he presents several screw propeller trials and experiments of the late 19th and early 20th century Reprint of the original edition from 1909 **Marine Propellers** Sydney Walker Barnaby, 1921 Screw Propellers and Estimation of Power for Propulsion of Ships Charles Wilson Dyson, 1918 *Screw Propellers and Marine Propulsion* Isaac McKim
