*Marine Protected Areas* National Research Council, Commission on Geosciences, Environment, and Resources, Ocean Studies Board, Committee on the Evaluation, Design, and Monitoring of Marine Reserves and Protected Areas in the United States, 2001-06-01 Although the ocean and the resources within seem limitless there is clear evidence that human impacts such as overfishing habitat destruction and pollution disrupt marine ecosystems and threaten the long term productivity of the seas Declining yields in many fisheries and decay of treasured marine habitats such as coral reefs has heightened interest in establishing a comprehensive system of marine protected areas MPAs areas designated for special protection to enhance the management of marine resources Therefore there is an urgent need to evaluate how MPAs can be employed in the United States and internationally as tools to support specific conservation needs of marine and coastal waters *Marine Protected Areas* compares conventional management of marine resources with proposals to augment these management strategies with a system of protected areas The volume argues that implementation of MPAs should be incremental and adaptive through the design of areas not only to conserve resources but also to help us learn how to manage marine species more effectively

*Marine protected areas* United States. Congress. House. Committee on Resources. Subcommittee on Fisheries Conservation, Wildlife, and Oceans, 2002      **Marine Protected Areas** Joachim Claudet, 2011-09-29 Human induced environmental disturbance through fishery activities coastal development tourism and pollution is a major challenge to the restoration and conservation of marine biodiversity Synthesizing the latest research into marine biodiversity conservation and fisheries management this book provides regional and global perspectives on the role of Marine Protected Areas MPAs in confronting this challenge The approach is multidisciplinary covering all the fields involved in designating and assessing MPAs ecology fisheries science statistics economics sociology and genetics The book is structured around key topics

including threats to marine ecosystems and resources the effects and effectiveness of MPAs and the scaling up of MPA systems Both theoretical and empirical approaches are considered Recognizing the diversity of MPA sciences the book also includes one part designed specifically as a practical guide to implementing scientific assessment studies of MPAs and monitoring programs

Marine Protected Areas for Whales Dolphins and Porpoises Erich Hoyt, 2012-03-29 Erich Hoyt's handbook is an admirable timely and highly welcome contribution Michael Stachowitsch Marine Ecology What does it mean to save the whales if their habitat is left unprotected Marine Protected Areas for Whales Dolphins and Porpoises is the definitive handbook on this pressing issue and the first to bridge the gap between the disciplines of marine protected areas and cetacean conservation It launches a new chapter in cetacean conservation with its investigation into the crucial habitat needs and protection requirements of some 84 species The author one of the world's foremost experts in this field takes you around the world to investigate the promising results of the latest conservation research and the strategies for obtaining marine protected areas in coastal waters and on the high seas using national legislation and regional and international conventions This is an essential introduction guide and reference work for those working to ensure a future for whales and dolphins

**Governing Marine Protected Areas** Peter Jones, 2014-02-24 In this innovative volume the author addresses some important challenges related to the effective and equitable governance of marine protected areas MPAs These challenges are explored through a study of 20 MPA case studies from around the world A novel governance analysis framework is employed to address some key questions How can top down and bottom up approaches to MPA governance be combined What does this mean in reality in different contexts How can we develop and implement governance approaches that are both effective in achieving conservation objectives and equitable in fairly sharing associated costs and benefits The author explores the many issues that these questions raise as well as exploring options for addressing them A key theme is that MPA governance needs to combine people state and market approaches rather than being based on one approach and its related ideals Building on a critique of the governance analysis framework developed for common pool resources the author puts forward a more holistic and less prescriptive framework for deconstructing and analyzing the governance of MPAs This interdisciplinary analysis is aimed at supporting the development of MPA governance approaches that build social ecological resilience through both institutional and biological diversity It will also make a significant contribution to wider debates on natural resource governance as it poses some critical questions for contemporary approaches to related research and offers an alternative theoretical and empirical approach

**Report and Documentation of the Expert Workshop on Marine Protected Areas and Fisheries Management** Food and Agriculture Organization of the United Nations, 2007-01-01 This document contains the report of the workshop and the background papers commissioned for the meeting The report and in particular the Key Points adopted by the workshop will serve as basis for further work on developing technical guidelines for the design implementation and review of MPAs

**Implementation of the Sustainable Fisheries Act and the Reauthorization of the Magnuson-Stevens Fishery Conservation and Management Act** United States. Congress. House. Committee on Resources. Subcommittee on Fisheries Conservation, Wildlife, and Oceans,2002

**Marine Environment Protection and Biodiversity Conservation** Julian Roberts,2006-11-23 Despite the potential benefits that PSSA designation can deliver recent practice both within the IMO and by individual member States has considerably undermined confidence in this emerging concept The focus of this book is on the events within the IMO that have led to this lack of confidence arising In doing so this book presents an examination of coastal State practice with the PSSA concept In undertaking this analysis the research provides evidence of the value of the PSSA concept but also demonstrates its limitations In this regard the book presents a reality check which seeks to rationalise some of the heightened expectations with the concept that are apparent in the current debate The research argues that States may seek to designate PSSAs more for their iconic status than for any demonstrable environmental benefits that may be realised

**NOAA Coral Reef Ecosystem Research Plan for Fiscal Years 2007 to 2011** ,2007

*Ecosystem-based Fishery Management and the Reauthorization of the Magnuson-Stevens Fishery Conservation and Management Act* United States. Congress. House. Committee on Resources. Subcommittee on Fisheries Conservation, Wildlife, and Oceans,2002

*Ecosystem Concepts for Sustainable Bivalve Mariculture* National Research Council,Division on Earth and Life Studies,Ocean Studies Board,Committee on Best Practices for Shellfish Mariculture and the Effects of Commercial Activities in Drakes Estero, Pt. Reyes National Seashore, California,2010-03-18 U S mariculture production of bivalve molluscs those cultivated in the marine environment has roughly doubled over the last 25 years Although mariculture operations may expand the production of seafood without additional exploitation of wild populations they still depend upon and affect natural ecosystems and ecosystem services Every additional animal has an incremental effect arising from food extraction and waste

excretion Increasing domestic seafood production in the United States in an environmentally and socially responsible way will likely require the use of policy tools such as best management practices BMPs and performance standards BMPs represent one approach to protecting against undesirable consequences of mariculture An alternative approach to voluntary or mandatory BMPs is the establishment of performance standards for mariculture Variability in environmental conditions makes it difficult to develop BMPs that are sufficiently flexible and adaptable to protect ecosystem integrity across a broad range of locations and conditions An alternative that measures performance in sustaining key indicators of ecosystem state and function may be more effective Because BMPs address mariculture methods rather than monitoring actual ecosystem responses they do not guarantee that detrimental ecosystem impacts will be controlled or that unacceptable impact will be avoided Ecosystem Concepts for Sustainable Bivalve Mariculture finds that while performance standards can be applied for some broad ecosystem indicators BMPs may be more appropriate for addressing parameters that change from site to site such as the species being cultured different culture methods and various environmental conditions This book takes an in depth look at the environmental social and economic issues to present recommendations for sustainable bivalve mariculture
