Mass Spectrometry Part A Practical Spectroscopy:

Mass Spectrometry R A W Johnstone, 2007-10-31 Specialist Periodical Reports provide systematic and detailed review coverage of progress in the major areas of chemical research. Written by experts in their specialist fields, the series creates a unique service for the active research chemist, supplying regular critical in-depth accounts of progress in particular areas of chemistry. For over 80 years, the Royal Society of Chemistry and its predecessor, the Chemical Society, have been publishing reports charting developments in chemistry, which originally took the form of Annual Reports. However, by 1967, the whole spectrum of chemistry could no longer be contained within one volume, and the series Specialist Periodical Reports was born. The Annual Reports themselves still existed but were divided into two, and subsequently three volumes covering Inorganic, Organic, and Physical Chemistry. For more general coverage of the highlights in chemistry, they remain a must. Since that time, the SPR series has altered according to the fluctuating degree of activity in various fields of chemistry. Some titles have remained unchanged, while others have altered their emphasis, along with their titles, some have been combined under a new name, whereas others have had to be discontinued. The current list of Specialist Periodical Reports can be seen on the inside flap of this volume.

The Encyclopedia of Mass Spectrometry, 2015-12-04 Volume 9 Historical Perspectives Part A: The Development of Mass Spectrometry. The Encyclopedia of Mass Spectrometry describes and analyzes the development of many aspects of Mass Spectrometry. Beginning with the earliest types of Mass Analyzers, Historical Perspectives explores the development of many different forms of analytical processes and methods. The work follows various instruments and interfaces to the current state of detectors and computerization. It traces the use of Mass Spectrometry across many different disciplines, including Organic Chemistry, Biochemistry, and Proteomics, Environmental Mass Spectrometry, Forensic Science, Imaging, Medical Monitoring and Diagnosis, Earth and Planetary Sciences, and Nuclear Science. Finally, the book covers the history of manufacturers and societies, as well as the professionals who form the Mass Spectrometry community. Also available: Volume 9 Historical Perspectives Part B: Notable People in Mass Spectrometry, briefly reviews the lives and works of many of the major people who carried out this development. Preserves the history and development of Mass Spectrometry for use across scientific fields. Written and edited by Mass Spectrometry experts. Coordinates with Volume 9 Historical Perspectives Part B: Notable People in Mass Spectrometry, a collection of short biographies on many of the major people who carried out this development.

Mass Spectrometry of Natural Substances in Food Fred Mellon, Jim R Startin, Ron Self, 2007-10-31. Introducing the principles, practice, and applications of mass spectrometric techniques in the study of natural substances in foods, this book conveys the depth and breadth of modern mass spectrometry in relation to food analysis. It covers traditional techniques such as electron and chemical ionisation, and newer soft ionisation techniques such as matrix-assisted laser desorption ionisation and electrospray. All of these techniques are especially relevant in food quality and safety studies and in biopolymer analysis. The ability to analyse biopolymers by mass spectrometry is having a major impact on the

study of food structure components food proteins food pathogens and food components produced from genetically modified organisms The principles and practice of mass spectrometry are covered in the early chapters and are followed by applications in flavour analysis and the determination of non nutrient biologically active natural substances in foods The analysis and metabolic studies of amino acids peptides proteins lipids sugars carbohydrates and vitamins is also discussed with separate chapters on mineral and micronutrient metabolism and techniques of pyrolysis mass spectrometry Mass Spectrometry of Natural Substances in Food will be a valuable resource for food scientists food analysts and others working in food research nutrition and safety
