The Cambridge Handbook of Korean Linguistics Sungdai Cho, John Whitman, 2022-08-25 The Korean wave in music and film and Korea's rise to become the twelfth economic power in the world have boosted the world-wide popularity of Korean language study. The linguistic study of Korean with its rich syntactic and phonological structure, complex writing system and unique socio-historical context is now a rapidly growing research area. Contributions from internationally renowned experts on the language provide a state-of-the-art overview of key current research in Korean language and linguistics. Chapters are divided into five thematic areas: phonetics and phonology, morphology and syntax, semantics and pragmatics, sociolinguistics and psycholinguistics, and language pedagogy. The Handbook includes cross-linguistic data to illuminate the features of Korean and examples in Korean script, making it suitable for advanced students and researchers with or without prior knowledge of Korean linguistics. It is an essential resource for students and researchers wishing to explore the exciting and rapidly moving field of Korean linguistics. **Cognitive Lexicography** Carolin Ostermann, 2015-07-31 English lexicography and linguistics have always shared close ties, yet the potential of cognitive linguistics for lexicography has only been hesitantly acknowledged in the literature. This is what cognitive lexicography attempts to change by using insights gained in cognitive semantic research for the development of new dictionary features. After a short survey of the history and practice of English monolingual learner lexicography as well as an outline of the relationship between linguistics and lexicography, three new dictionary features are developed. They cover three different cognitive semantic theories as well as three different parts of

the monolingual dictionary entry each time for a new set of lexemes Frame semantics conceptual metaphor theory as well as cognitive conceptions of polysemy are used to create a new example section for agentive nouns a new defining structure for emotion terms and a new microstructural arrangement for particle entries Dictionary analyses on all as well as user studies on two of the features complement these suggestions The monograph thus presents a new approach to lexicography that incorporates into its description of lexical items how humans perceive and conceptualise language
