5 and 6 cover the convolution process and its use in representing differential and difference equations The distributional Fourier and Laplace transformations are developed in Chapters 7 and 8 and the latter transformation is applied in Chapter 9 to obtain an operational calculus for the solution of differential and difference equations of the initial condition type Some of the previous theory is applied in Chapter 10 to a discussion of the fundamental properties of certain physical systems while Chapter 11 ends the book with a consideration of periodic distributions Suitable for a graduate course for engineering and science students or for a senior level undergraduate course for mathematics majors this book presumes a knowledge of advanced calculus and the standard theorems on the interchange of limit processes A broad spectrum of problems has been included to satisfy the diverse needs of various types of students
