evaluation and management of dysphagia in neurological disease Masahiro Nakamori, Omar Ortega Fernández, Jun Kayashita, Mineka Yoshikawa, 2024-08-26 Neurological diseases tend to cause dysphagia which can lead to aspiration pneumonia influencing patient mortality and morbidity and increase the cost of medical care. Thus it is essential to implement better evaluation, intervention and rehabilitation for dysphagia. Many protocols and tools for assessing dysphagia including aspiration have been developed. Videofluoroscopic and videoendoscopic examinations are the current gold standard for assessing dysphagia. In addition, novel methods and instruments have been developed which are non-invasive and simple to implement. As for clinical intervention, several effective rehabilitation protocols as well as traditional methods have been utilized. Moreover, novel machines such as transcranial magnetic stimulation, transcranial direct current stimulation and transcutaneous electrical stimulation of the neck are being introduced and are expected to improve neuromuscular function.

Evidence-Based Neurology Bart Demaerschalk, Dean Wingerchuk, 2015-09-08 From an expert editor team drawn from the Cochrane Neurological Network, *Evidence Based Neurology* provides specialists and those in training with the skills and knowledge to apply evidence based practice in the clinical setting. Biofeedback and the Modification of Behavior Aubrey J. Yates, 2012-12-06 In this book I have attempted to evaluate critically the very large literature which has accumulated in the area of biofeedback over the past 10 15 years As might be expected in any area of psychology with clinical possibilities the literature divides itself into two main categories fundamental research studies and therapeutic studies It is now apparent that the clinical applications of biofeedback have far outstripped their fundamental research bases with the inevitable result that the initial wave of enthusiasm may be replaced with an unnecessarily severe skepticism Either extreme position is unjustified Biofeedback does represent an important new

approach to the elucidation of the role played by internal systems in the adjustment of the organism to its environment But its potential will only be revealed if its use in practice is soundly based on fundamental research There are promising signs that this is being realized so that there is cause for optimism Aubrey J Yates Perth Australia A Note on the References With the exception of no more than two or three papers all the references in this book have been obtained and read However many of them were published in journals which will not be readily accessible to the reader who may be interested in consulting more directly particular articles which attract his attention
