Applied Mathematical Modeling Douglas R. Shier, K.T. Wallenius, 1999-11-11 The practice of modeling is best learned by those armed with fundamental methodologies and exposed to a wide variety of modeling experience Ideally this experience could be obtained by working on actual modeling problems But time constraints often make this difficult Applied Mathematical Modeling provides a collection of models illustrating the power and richness of the mathematical sciences in supplying insight into the operation of important real world systems It fills a gap within modeling texts focusing on applications across a broad range of disciplines The first part of the book discusses the general components of the modeling process and highlights the potential of modeling in practice These chapters discuss the general components of the modeling process and the evolutionary nature of successful model building The second part provides a rich compendium of case studies each one complete with examples exercises and projects In keeping with the multidimensional nature of the models presented the chapters in the second part are listed in alphabetical order by the contributor s last name Unlike most mathematical books in which you must master the concepts of early chapters to prepare for subsequent material you may start with any chapter Begin with cryptology if that catches your fancy or go directly to bursty traffic if that is your cup of tea Applied Mathematical Modeling serves as a handbook of in depth case studies that span the mathematical sciences building upon a modest mathematical background Readers in other applied disciplines will benefit from seeing how selected mathematical modeling philosophies and techniques can be brought to bear on problems in their disciplines The models address actual situations studied in chemistry physics demography economics civil engineering environmental engineering industrial engineering telecommunications and other areas

The Self-Directed Learning Handbook Maurice Gibbons, 2003-02-03 The Self Directed Learning Handbook offers teachers and principals an innovative program for customizing schooling to the learning needs of individual students and for motivating them to take increasing responsibility for deciding what and how they should learn Whether the students are struggling or proficient the program is designed to nurture their natural passion for learning and mastery challenging them to go beyond the easy and familiar so they can truly excel The program can be introduced in stages in any middle or high school classroom and enables students of diverse abilities to design and pursue independent course work special projects or even artistic presentations community field work or apprenticeships Using this approach the students take on an increasingly autonomous self directed role as they progress The heart of the program is the action contract or learning agreement whereby the student sets challenging yet attainable goals commits to a path for achieving them and evaluates the results Special emphasis is placed on developing skills and competencies that can serve the student well in his or her academic and career endeavors National Library of Medicine
