Vladimir Geroimenko, Chaomei Chen, 2005-11-19 Correcting the Great Mistake People often mistake one thing for another That s human nature However one would expect the leaders in a particular field of endeavour to have superior abilities to discriminate among the developments within that field That is why it is so perplexing that the technology elite supposedly savvy folk such as software developers marketers and businessmen have continually mistaken Web based graphics for something it is not The first great graphics technology for the Web VRML has been mistaken for something else since its inception Viewed variously as a game system a format for architectural walkthroughs a platform for multi user chat and an augmentation of reality VRML may qualify as the least understood invention in the history of information technology Perhaps it is so because when VRML was originally introduced it was touted as a tool for putting the shopping malls of the world online at once prosaic and horrifyingly mundane to those of us who were developing it Perhaps those first two initials VR created expectations of sprawling photorealistic fantasy landscapes for exploration and play across the Web Or perhaps the magnitude of the invention was simply too great to be understood at the time by the many ironically even by those spending the money to underwrite its development Regardless of the reasons VRML suffered in the mainstream as it was twisted to meet unintended ends and stretched far beyond its limitations

Visualization in Mathematics, Reading and Science

Education Linda M. Phillips, Stephen P. Norris, John S. Macnab, 2010-09-02 Science education at school level worldwide faces three perennial problems that have become more pressing of late These are to a considerable extent interwoven with concerns about the entire school curriculum and its reception by students The first problem is the increasing intellectual isolation of science from the other subjects in the school curriculum Science is too often still taught didactically as a collection of pre determined truths about which there can be no dispute As a consequence many students do not feel any ownership of these ideas Most other school subjects do somewhat better in these regards For example in language classes

dents suggest different interpretations of a text and then debate the relative merits of the cases being put forward Moreover ideas that are of use in science are presented to students elsewhere and then re taught often using different terminology in science For example algebra is taught in terms of $x y z$ in mathematics classes but students are later unable to see the relevance of that to the meaning of the universal gas laws in physics where $p v t$ are used The result is that students are confused and too often alienated leading to their failure to achieve that extraction of an education from a scheme of instruction which Jerome Bruner thought so highly desirable

Current Challenges in Patent Information Retrieval Mihai Lupu, Katja Mayer, Noriko Kando, Anthony J. Trippe, 2017-03-24 This second edition provides a systematic introduction to the work and views of the emerging patent search research and innovation communities as well as an overview of what has been achieved and perhaps even more importantly of what remains to be achieved It revises many of the contributions of the first edition and adds a significant number of new ones The first part Introduction to Patent Searching includes two overview chapters on the peculiarities of patent searching and on contemporary search technology respectively and thus sets the scene for the subsequent parts The second part on Evaluating Patent Retrieval then begins with two chapters dedicated to patent evaluation campaigns followed by two chapters discussing complementary issues from the perspective of patent searchers and from the perspective of related domains notably legal search High Recall Search includes four completely new chapters dealing with the issue of finding only the relevant documents in a reasonable time span The last and with six papers the largest part on Special Topics in Patent Information Retrieval covers a large spectrum of research in the patent field from classification and image processing to translation Lastly the book is completed by an outlook on open issues and future research Several of the chapters have been jointly written by intellectual property and information retrieval experts However members of both communities with a background different to that of the primary author have reviewed the chapters making the book accessible to both the patent search community and to the information retrieval research community It also not only offers the latest findings for academic researchers but is also a valuable resource for IP professionals wanting to learn about current IR approaches in the patent domain
