I GENERAL INFORMATION

1.1 FEATURES

The TP 2700 Universal Bridge is a compact, self-contained instrument that brings new versatility to the rapid determination of a wide range of impedance values. Facilities are provided for the application of external a.c. and d.c. supplies for use in a variety of specialised measurement procedures.

The internal energising sources for the bridge are a 1 kc/s oscillator for a.c. measurements of capacitance, inductance and resistance; and the 9 V power supply battery for d.c. resistance measurements. The detector has been designed to have a stable response from 20 c/s to 20 kc/s. This allows an external source to be used to energise the bridge for measurements over a more representative range of frequencies. D.C. voltages higher than that of the battery may also be applied externally for improved discrimination with resistance measurements.

Another facility enables a d.c. bias to be applied to the component under test. Up to 500 V may be used for polarising electrolytic capacitors or for investigating the properties of non-linear resistors. Alternatively, up to 40 mA may be passed through iron-core inductors by suitable external connections or up to 200 mA when using the D.C. Current Adapter, TM 6113.
