Foundations of Restoration Ecology Donald A. Falk,Margaret A. Palmer,Joy B. Zedler,2013-03-19 As the practical application of ecological restoration continues to grow there is an increasing need to connect restoration practice to areas of underlying ecological theory Foundations of Restoration Ecology is an important milestone in the field bringing together leading ecologists to bridge the gap between theory and practice by translating elements of ecological theory and current research themes into a scientific framework for the field of restoration ecology Each chapter addresses a particular area of ecological theory covering traditional levels of biological hierarchy such as population genetics demography community ecology as well as topics of central relevance to the challenges of restoration ecology such as species interactions fine scale heterogeneity successional trajectories invasive species ecology ecophysiology Several chapters focus on research tools research design statistical analysis modeling or place restoration ecology research in a larger context large scale ecological phenomena macroecology climate change and paleoecology evolutionary ecology The book makes a compelling case that a stronger connection between ecological theory and the science of restoration ecology will be mutually beneficial for both fields restoration ecology benefits from a stronger grounding in basic theory while ecological theory benefits from the unique opportunities for experimentation in a restoration context Foundations of Restoration Ecology advances the science behind the practice of restoring ecosystems while exploring ways in which restoration ecology can inform basic ecological questions It provides the first comprehensive overview of the theoretical foundations of restoration ecology and is a must have volume

for anyone involved in restoration research teaching or practice
