Marine Mammals And Noise:

Marine Mammals and Noise W. John Richardson, Charles R. Greene Jr., Charles I. Malme, Denis H. Thomson, 2013-10-22

Many marine mammals communicate by emitting sounds that pass through water. Such sounds can be received across great distances and can influence the behavior of these undersea creatures. In the past few decades the oceans have become increasingly noisy as underwater sounds from propellers, sonars, and other human activities make it difficult for marine mammals to communicate. This book discusses among many other topics just how well marine mammals hear, how noisy the oceans have become, and what effects these new sounds have on marine mammals. The baseline of ambient noise, the sounds produced by machines, and mammals, the sensitivity of marine mammal hearing, and the reactions of marine mammals are also examined. An essential addition to any marine biologist's library, *Marine Mammals and Noise* will be especially appealing to marine mammalogists, researchers, policy makers, and regulators, and marine biologists and oceanographers using sound in their research. *Marine Mammals and Noise*, 2007 *Marine Mammals and Noise*, 2007 *Effects of Noise on Marine Mammals* William John Richardson, 1991 *Ocean Noise and Marine Mammals* National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Potential Impacts of Ambient Noise in the Ocean on Marine Mammals, 2003-06-22. For the 119 species of marine mammals as well as for some other aquatic animals, sound is the primary means of learning about the environment and of communicating, navigating, and foraging. The possibility that human-generated noise could harm marine mammals or significantly interfere with their normal activities is an issue of increasing concern. Noise and its potential impacts have been regulated since the passage of the Marine Mammal Protection Act of 1972. Public awareness of the issue escalated in the 1990s when researchers began using high intensity sound to measure ocean climate changes. More recently, the stranding of beaked whales in proximity to Navy sonar use has again put the issue in the spotlight. *Ocean Noise and Marine Mammals* reviews sources of noise in the ocean environment, what is known of the responses of marine mammals to acoustic disturbance, and what models exist for describing ocean noise and marine mammal responses. Recommendations are made for future data gathering efforts, studies of marine mammal behavior and physiology, and modeling efforts necessary to determine what the long and short term impacts of ocean noise on marine mammals.

Marine Mammal Populations and Ocean Noise National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Characterizing Biologically Significant Marine Mammal Behavior, 2005-02-24. Attention has been drawn to the subject of how ocean noise affects marine mammals by a series of marine mammal strandings, lawsuits, and legislative hearings, and most recently the report from the U.S. Commission on Ocean Policy. One way to assess the impact of ocean noise is to consider whether it causes changes in animal behavior that are biologically significant, that is, those that affect an animal's ability to grow, survive, and reproduce. This report offers a conceptual model designed to clarify which marine mammal behaviors are biologically significant for conservation purposes. The report is intended to help scientists and

policymakers interpret provisions of the federal Marine Mammal Protection Act

International Regulation of Underwater Sound Elena McCarthy, 2007-05-08 Numerous incidents suggest that man made sound injures and can kill marine mammals This book offers an objective look at how ocean noise should be addressed given the lack of regulatory structure and the scientific uncertainty over the effects of noise on marine life It is an essential text for policymakers governments and NGOs biologists environmental activists oceanographers and those in the shipping engineering and offshore oil and gas industries

Marine Mammal Populations and Ocean Noise. Determining When Noise Causes Biologically Significant Effects ,2005 In its 2000 report Marine Mammals and Low frequency Sound the National Research Council recommended that the Marine Mammal Protection Act definition of Level B harassment should be limited to meaningful disruption of biologically significant activities that could affect demographically important variables such as reproduction and longevity Recognizing that the term biologically significant is increasingly used in resource management and conservation plans this study will further describe the scientific basis of the term in the context of marine mammal conservation and management related to ocean noise Based on input from a scientific workshop consideration of the relevant literature and other sources the committee will produce a brief report that reviews and characterizes the current scientific understanding of when animal behavior modifications induced by transient and non transient ocean acoustic sources individually or cumulatively affect individuals in ways that have negative consequences for populations **Effects of Noise of Offshore Oil and Gas Operations on Marine Mammals** R. Marine Mammals and Low-Frequency Sound

National Research Council, Commission on Geosciences, Environment and Resources, Ocean Studies Board, Committee to Review Results of ATOC's Marine Mammal Research Program, 2000-06-11 Sound has become a major tool for studying the ocean Although the ocean is relatively opaque to light it is relatively transparent to sound Sound having frequencies below 1 000 Hertz Hz is often defined as low frequency sound The speed of sound is proportional to the temperature of the water through which it passes Therefore sound speed can be used to infer the average temperature of the water volume through which sound waves have passed The relationship between water temperature and the speed of sound is the basis for the Acoustic Thermometry of Ocean Climate ATOC experiment The ATOC experiment is designed to monitor the travel time of sound between sources off the coasts of Hawaii and California and several receivers around the Pacific Ocean in order to detect trends in ocean temperature and for other research and monitoring purposes Some whales seals and fish use low frequency sound to communicate and to sense their environments For example baleen whales and some toothed whales are known to use and respond to low frequency sound emitted by other individuals of their species Sharks are not known to produce low frequency sound but are attracted to pulsed low frequency sounds Therefore it is possible that human generated low frequency sound could interfere with the natural behavior of whales sharks and some other marine animals Marine Mammals and Low Frequency Sound is an updated review of the National Research Council 1994 report Low Frequency Sound and Marine Mammals Current Knowledge and Research Needs based on data obtained from the MMRP and results of any other relevant research including ONR's research program in low frequency sound and marine mammals This report compares new data with the research needs specified in the 1994 NRC report focusing on the strengths and weaknesses of the data for answering important outstanding questions about marine mammal responses to low frequency sound and identifies areas where gaps in our knowledge continue to exist

The Effects of Noise on Aquatic Life II Arthur N. Popper, Anthony Hawkins, 2015-11-26 The meeting of Aquatic Noise 2013 will introduce participants to the most recent research data regulatory issues and thinking about effects of man made noise and will foster critical cross disciplinary discussion between the participants Emphasis will be on the cross fertilization of ideas and findings across species and noise

sources As with its predecessor The Effects of Noise on Aquatic Life 3rd International Conference will encourage discussion of the impact of underwater sound its regulation and mitigation of its effects With over 100 contributions from leading researchers a wide range of sources of underwater sound will be considered
