Passive Solar Architecture David Bainbridge, Ken Haggard, 2011-08-18 New buildings can be designed to be solar oriented naturally heated and cooled naturally lit and ventilated and made with renewable sustainable materials no matter the location or climate In this comprehensive overview of passive solar design two of America's solar pioneers give homeowners architects designers and builders the keys to successfully harnessing the sun and maximizing climate resources for heating cooling ventilation and daylighting Bainbridge and Haggard draw upon examples from their own experiences as well as those of others of more than three decades to offer both overarching principles as well as the details and formulas needed to successfully design a more comfortable healthy and secure place in which to live laugh dance and be comfortable Even if the power goes off *Passive Solar Architecture* also discusses greener and more sustainable building materials and how to use them and explores the historical roots of green design that have made possible buildings that produce more energy and other resources than they use

Slow Wood Brian Donahue, 2024-11-26 A radical proposal for healing the relationship between humans and forests through responsible sustainable use of local and regional wood in home building American homes are typically made of lumber and plywood delivered by a global system of ruthless extraction or of concrete and steel which are even worse for the planet Wood is often the most sustainable material for building but we need to protect diverse forests as much as we desperately need more houses Brian Donahue addresses this modern conundrum by documenting his experiences building a timber frame home from the wood growing on his family farm practicing worst first forestry Through the stories of the trees he used sugar maple black cherry black birch and hemlock and some he didn't white pine and red oak the book also explores the history of Americans relationship with their forests Donahue provides a new interpretation of the connection between American houses and local woodlands He delves into how this bond was broken by the rise of a market economy of industrial resource extraction and addresses the challenge of restoring a more enduring relationship Ultimately this book provides a blueprint and a stewardship plan for how to live more responsibly with the woods offering a sustainable approach to both forestry and building centered on tightly connected ecological and social values

The Solar House Daniel D. Chiras, 2002 While heat from sunlight and ventilation from breezes is free for the taking few modern architects or builders really understand the principles involved Yet natural conditioning Heating and cooling with passive solar techniques is a viable alternative to fossil fuels Acknowledging the good intentions of misguided solar designers in the past the author highlights certain egregious errors and shows how to avoid them The author shows how to select a cost effective energy efficient and environmentally friendly backup heating system how to preserve indoor air quality in an airtight energy efficient home and ways of employing green building materials in a naturally conditioned home
