Common Functions	1

Lathe Tools	5
Dimensioning & Programming	7
Drawing & Dimensioning Grading	9

The objective of this handout is to familiarize you with Mastercam, and provide a quick reference to some of the features.

Some useful tips to help streamline your experience:

- The underlined letters in the menu words are "hot" keys for the particular function. You may navigate the menu from the keyboard while drawing the geometry with the mouse, it is very efficient running Mastercam this way.
- It is a good practice to turn on the number pad since we are keying in values frequently.
- "Auto-cursor" snaps to end points, midpoints, and centers of entities.
- Right clicking the mouse displays a drop-down menu of common functions. You can shut off auto-cursor from this menu. Sometimes auto-cursor is too sticky when entities are close together.
- You do not need to be too accurate selecting entities. The cursor is sensitive enough to select an entity without needing to be right on top of it.
- Selection of entities using "polygon" instead of "window" is useful when the entities you want to select surround other entities that you do not want. This feature allows you to create a random shaped "selection window" around the particular entities that you want.
- ALT+W turns on viewports. This is useful for viewing the top view, front view, and an isometric view all at the same time, especially when backplotting a toolpath to see the Z depths and tool movement. Viewports can also be accessed from the Main menu through the Screen menu, Next menu, Viewports button.
- ALT+H displays a help window for the current function you are working with.
- The function keys are also very useful. Allowing you to turn on the axis, zoom, unzoom, fit, and other functions without needing to use the mouse.
