Perry,2007-01-02 The Google Web Toolkit GWT is a nifty

framework that Java programmers can use to create Ajax applications The GWT allows you to create an Ajax application in your favorite IDE such as IntelliJ IDEA or Eclipse using paradigms and mechanisms similar to programming a Java Swing application After you code the application in Java the GWT's tools generate the JavaScript code the application needs You can also use typical Java project tools such as JUnit and Ant when creating GWT applications The GWT is a free download and you can freely distribute the client and server side code you create with the framework This shortcut explains how to get started with the GWT and then demonstrates how to create a simple Ajax application

Pro Single Page Application Development
Gil Fink, Ido Flatow, SELA Group, 2014-05-10 One of the most important and exciting trends in web development in recent years is the move towards single page applications or SPAs Instead of clicking through hyperlinks and waiting for each page to load the user loads a site once and all the interactivity is handled fluidly by a rich JavaScript front end If you come from a background in ASP.NET development you'll be used to handling most interactions on the server side Pro Single Page Application Development will guide you through your transition to this powerful new application type The book starts in Part I by laying the groundwork for SPA development You'll master some JavaScript techniques that will come in useful later on and get to know the building blocks of a single page application including modules routing and MV frameworks In Part II you'll build the client for your application This is where the magic happens as the authors take you through the process step by step Backbone.js is the ideal library for demonstrating SPA development in practice but you can apply the same principles with other frameworks in your future applications Part III takes you through the process of building the server side of your application using ASP.NET Web API and hooking up the two parts of your application to create a working whole SPA development also comes with its own particular challenges including tracking history user interface performance and how to handle search engine optimization In the final chapters the authors guide you through some of these issues and advanced techniques and finish by showing you how to deploy your application As SPAs become the de facto standard of web application development the in depth Pro Single Page Application Development will be your one stop shop for creating fluid modern applications on the web

Evaluation and comparison of Ajax Frameworks regarding applicability, productivity and technical limitations Lukas Ostermaier, 2008-03-11 Inhaltsangabe Abstract For some years the Internet has been dominated by phrases like Web 2 0 and Ajax The catchword Web 2 0 which was originally established by O Reilly at the first Web 2 0 conference in October 2004 not only describes a new way of perception and usage of the internet e g social software like blogs wikis etc but also stands for more or less innovative techniques as for instance RSS or Ajax The latter is a combination of techniques that have been available since the late 1990s such as JavaScript asynchronous requests and XML However the term Ajax only exists since Jesse James Garret introduced it in his article in February 2005 Since then Ajax has experienced a real hype Google Mail Google Maps or Flickr just serve as examples for the mass of applications that have to attribute their success substantially to Ajax When it comes to web application development there has also been a lot of progress in the field of Ajax Ajax frameworks of all kinds massively gained popularity and flooded the development community From the biggest companies through to small development teams almost everyone has published his own Ajax framework or library in the last two years In the meantime there are far more than 150 different frameworks for various programming languages and diverse aims Because of this uncontrolled growth of frameworks it is quite difficult to say which of those is most suitable for a specific project There are two key questions that have to be considered in case of Ajax or Rich Internet Applications RIAs in general How can Ajax significantly increase the business value of an application and how can it be applied productively This thesis mainly focuses on the latter question by evaluating three Ajax frameworks of large companies with a strong background by means of an example application with respect to commercial applicability productivity performance as well as enhancement and adaptation possibilities Furthermore this work discusses the technical limitations and problems of Ajax and provides an outlook on future developments in this area As example application for the evaluation a web based tracking system for public transportation is implemented Each single vehicle is visualized on a street map according to its current position By the implementation of this application with each of the three chosen Ajax frameworks their applicability productivity and

performance is illustrated as well as
