Governing Marine Protected Areas Resilience Through Diversity Earthscan Oceans:

Governing Marine Protected Areas Peter Jones, 2014-02-24 In this innovative volume the author addresses some important challenges related to the effective and equitable governance of marine protected areas MPAs These challenges are explored through a study of 20 MPA case studies from around the world A novel governance analysis framework is employed to address some key questions How can top down and bottom up approaches to MPA governance be combined What does this mean in reality in different contexts How can we develop and implement governance approaches that are both effective in achieving conservation objectives and equitable in fairly sharing associated costs and benefits The author explores the many issues that these questions raise as well as exploring options for addressing them A key theme is that MPA governance needs to combine people state and market approaches rather than being based on one approach and its related ideals Building on a critique of the governance analysis framework developed for common pool resources the author puts forward a more holistic and less prescriptive framework for deconstructing and analyzing the governance of MPAs This interdisciplinary analysis is aimed at supporting the development of MPA governance approaches that build social ecological resilience through both institutional and biological diversity It will also make a significant contribution to wider debates on natural resource governance as it poses some critical questions for contemporary approaches to related research and offers an alternative theoretical and empirical approach

Governing Marine Protected Areas Peter J. S. Jones, 2014 These challenges are explored through an analysis of twenty MPA case studies from around the world

Marine Transboundary Conservation and Protected Areas Peter Mackelworth, 2016-04-28 The marine environment does not naturally respect arbitrary international boundaries The establishment and management of transboundary marine protected areas therefore presents major governance challenges This book analyses a series of marine transboundary conservation initiatives embedded in varying contextual situations to examine the underlying reasons for their success or failure Utilising an adapted pathways of influence framework it provides insights into the development of marine transboundary conservation initiatives looking at the effectiveness of international rules international norms and discourse market forces and direct access to policy making Examples come from a wide range of jurisdictions including territorial seas continental shelves exclusive economic zones and areas beyond national jurisdiction Case studies include initiatives in the Coral Triangle West Africa Central America the Wadden Sea the Red Sea and the

Mediterranean Sea In addition the authors assess the potential for developing wider international cooperation as a result of relationships forged through involvement within these marine transboundary conservation initiatives **Routledge**

The Ecosystem Approach in Ocean Planning and Governance David Langlet, Rosemary Rayfuse, 2018-12-24 The Ecosystem Approach in Ocean Planning and Governance takes stock of the challenges associated with implementing an ecosystem approach in ocean governance In addition to theorizing the notion of Ecosystem Approach and its multifaceted implications the book provides in depth analyses of lessons learned and remaining challenges associated with making the Ecosystem Approach fully relevant and operational in different marine policy fields including marine spatial planning fisheries and biodiversity protection In doing so it adds much needed legal and social science perspectives to the existing literature on the Ecosystem Approach in relation to the marine environment While focusing predominantly on the European context the perspective is enriched by analyses from other jurisdictions including the USA

Marine Biodiversity Conservation Keith Hiscock, 2014-08-21 Effective marine biodiversity conservation is dependent upon a clear scientific rationale for practical interventions This book is intended to provide knowledge and tools for marine conservation practitioners and to identify issues and mechanisms for upper level undergraduate and Masters students It also provides sound guidance for marine biology field course work and professionals The main focus is on benthic species living on or in the seabed and immediately above rather than on commercial fisheries or highly mobile vertebrates Such species including algae and invertebrates are fundamental to a stable and sustainable marine ecosystem The book is a practical guide based on a clear exposition of the principles of marine ecology and species biology to demonstrate how marine conservation issues and mechanisms have been tackled worldwide and especially the criteria structures and decision

trees that practitioners and managers will find useful Well illustrated with conceptual diagrams and flow charts the book includes case study examples from both temperate and tropical marine environments

Marine Protected Areas Economics, Management and Effective Policy Mixes OECD,2017-06-05 Intense exploitation of our oceans and seas is degrading marine biodiversity and ecosystems at an alarming rate This report presents good practice insights for effectively managing marine protected areas MPAs one of the policy instruments available for the conservation and sustainable

Ocean Energy Glen Wright,Sandy Kerr,Kate Johnson,2017-12-14 Energy from wave and tidal power is a key component of current policies for renewable sources of energy This book provides the first comprehensive exploration of legal economic and social issues related to the emerging ocean energy industry in particular wave and tidal energy technologies This industry is rapidly developing and considerable technical literature has developed around the technology However it is shown that challenges relating to regulation and policy are major impediments to industry development and these aspects have not previously been sufficiently highlighted and studied The book informs policymakers industry participants and researchers of the key issues in this developing field Ocean energy is considered in the context of the blue economy and an industrialising ocean and the topics covered include development of policy policy instruments risk and delay in technology development legal aspects consenting processes resource management impact assessment human interactions conflicts consultation community benefits and spatial planning of the marine environment While offshore wind energy sited in the oceans but not strictly derived from the ocean is not the primary focus of the book there is also discussion of the similarities and differences between offshore wind and wave and tidal power policy dimensions

Marine Biodiversity, Climatic Variability and Global Change Grégory Beaugrand,2014-11-28 Biodiversity loss in terrestrial environments associated with human activities has been appreciated as a major issue for some years now What is less well documented is the effect of such activities including climate change on marine biodiversity This pioneering book is the first to address this important but neglected topic which is likely to be the key challenge for marine scientists in the near future Using a multidisciplinary and a holistic approach the book reveals how climatic variability controls biodiversity at time scales ranging from synoptic meteorological events to millions of years and at spatial scales ranging from local sites to the whole ocean It shows how global change including anthropogenic climate change ocean acidification and more direct human influences such as exploitation pollution and eutrophication may alter biodiversity ecosystem functioning and regulating and provisioning services The author proposes a theory termed the macroecological theory on the arrangement of life which explains how biodiversity is organized and how it responds to climatic variability and anthropogenic climate change The book concludes with recommendations for further research and theoretical development to identify oceanic areas in need of observation and gaps in current scientific knowledge Many references and comparisons with the terrestrial realm are included in all chapters to better understand the universality of the relationships between biodiversity climate and the environment The book will

serve as a textbook for all students and researchers of marine science and environmental change but will also be accessible to the more general reader

New frontiers of marine governance in the ocean decade Helena Calado, Catarina Frazão Santos, José Guerreiro, Jan Van Tatenhove, Marie Bonnin, 2023-08-30

[The Great Barrier Reef](#) Ben Daley, 2014-07-17

The Great Barrier Reef is located along the coast of Queensland in north east Australia and is the world's largest coral reef ecosystem. Designated a World Heritage Area, it has been subject to increasing pressures from tourism, fishing, pollution, and climate change and is now protected as a marine park. This book provides an original account of the environmental history of the Great Barrier Reef based on extensive archival and oral history research. It documents and explains the main human impacts on the Great Barrier Reef since European settlement in the region, focusing particularly on the century from 1860 to 1960, which has not previously been fully documented, yet which was a period of unprecedented exploitation of the ecosystem and its resources. The book describes the main changes in coral reefs, islands, and marine wildlife that resulted from those impacts. In more recent decades, human impacts on the Great Barrier Reef have spread, accelerated, and intensified with implications for current management and conservation practices. There is now better scientific understanding of the threats faced by the ecosystem. Yet these modern challenges occur against a background of historical levels of exploitation that is little known and that has reduced the ecosystem's resilience. The author provides a compelling narrative of how one of the world's most iconic and vulnerable ecosystems has been exploited and degraded but also how some early conservation practices emerged.

Maritime Clusters and the Ocean Economy Peter B. Myles, 2017-09-07

Over the last decade, the concept of clustering has become a central idea for analyzing the competitiveness of nations, industries, and firms. This book shows how the cluster concept can be usefully applied to the study of maritime activities. Such activities, including shipping, shipbuilding, and port and maritime services, are clearly geographically concentrated in a number of maritime clusters. However, as the author shows, these are having to compete with other uses of the coasts and oceans, including capture fisheries, marine aquaculture, offshore energy, and tourism. Sound governance and planning is therefore required to manage the competing claims for ocean space. The book shows how competing industries and other stakeholders can cooperate and benefit from an integrated approach to the development of maritime clusters. The contribution of approaches such as integrated coastal zone management and innovations such as ocean business councils, as well as coordinated networks of maritime clusters, are reviewed. Case studies are included from around the world, including detailed examples of the development of the Nelson Mandela Bay Maritime Cluster in South Africa and from Poland in the Baltic Sea.

Marine Extremes Erika Techera, Gundula Winter, 2019-01-14

Marine extremes, as they are conceived of in this volume, encompass environments, activities, events, and impacts. Extreme environments found in and around our oceans, including the deep sea and seabed, as well as the frozen polar regions, are being seriously affected by both extreme behaviours (dumping and discharge of waste, illegal fishing, and piracy) and extreme events (storms, tsunamis, extreme waves, and marine heatwaves). The

aim of this book is to highlight the multi disciplinary knowledge and inputs needed to address marine extremes and thereafter to explore opportunities and current challenges Safe and healthy oceans are important for economic recreational and cultural activities in addition to the maintenance of ecosystem services upon which we rely This volume gathers a unique mix of researchers working on scientific aspects of biological ecosystems and physical processes together with social scientists exploring law and governance options community preferences cultural values economic aspects and criminological drivers and approaches The multi disciplinary feature of this book breaks down barriers that arise between disparate fields of research so that integrated solutions to ocean challenges can be found Overall this book argues that if we are to achieve sustainable utilisation of our oceans and blue economy goals we must better understand and respond to the extreme environments activities events and impacts The book is a valuable addition to the literature and will be of interest to researchers in marine science ocean governance and natural resource economics as well as to professionals and government officials concerned with marine policy and planning

Transboundary Marine Spatial Planning and International Law Daud Hassan,Tuomas Kuokkanen,Niko Soininen,2015-07-16 Marine Spatial Planning MSP is an integrated and comprehensive approach to ocean governance and is used to establish a rational use of marine space and reconcile conflicting interests of its users MSP allows both a high level of environmental protection and a wide range of human activities and emphasizes coordinated networks of national regional and global institutions This book focuses on the framework of international law behind MSP and especially on the transboundary aspects of MSP It first sets out a general framework for transboundary MSP and then moves on to compare and assess differences and similarities between different regions Specific detailed case studies include the EU with the focus on the Baltic Sea and North Sea the Bay of Bengal and Great Barrier Reef in Australia The authors examine the national and regional significance of MSP from an integrated and sustainable ocean governance point of view They also show how transboundary MSP can create opportunities and positive initiatives for cross border cooperation and contribute to the effective protection of the regional marine environment
