Valavanis, George J Vachtsevanos, 2021-01-14 The main goal of this two volume reference work is to be a comprehensive resource for the academic and research communities industry and governmental organizations that use Unmanned Aerial Vehicles UAVs in a wide spectrum of applications The Handbook covers all aspects of UAVs from design to users It is an exhaustive reference to the literature for a wide spectrum of people and will be covering aspects such as science engineering development design and modeling applications military and civilian use who's who's doing what manufacturers etc The handbook will be suitable for not only those who need just information about UAVs but also to the scientists engineers and practitioners who work in the area of UAVs The handbook also targets academics and graduate students who conduct research in the area and industry manufacturers and users in the UAV area [An Optimized Circulating Vector Field](#)

[Obstacle Avoidance Guidance for Unmanned Aerial Vehicles](#) Garrett Stuart Clem, 2018 Unmanned Aerial Vehicles UAVs conventionally navigate by following a series of pre planned waypoints When encountering an obstacle in flight such as no fly zones or other aircraft the vehicle's path or waypoints may need to be re planned Waypoint guidance can be used to avoid obstacles which are typically generated off line and relayed to the UAV requiring active communications Vector Fields VFs that are generated based on a desired path can provide guidance around a newly discovered obstacle without the need for a re plan VF convergence and circulation components were optimized to minimize deviation from a desired path when guiding around a circular obstacle Results indicated that the developed VF obstacle avoidance optimizer provides similar path deviation performance as waypoints without the need for re planning

Cooperative Path Planning of Unmanned Aerial Vehicles Antonios Tsourdos, Brian White, Madhavan Shanmugavel, 2010-11-09 An invaluable addition to the literature on UAV guidance and cooperative control *Cooperative Path Planning of Unmanned Aerial Vehicles* is a dedicated practical guide to computational path planning for UAVs One of the key issues facing future development of UAVs is path planning it is vital that swarm UAVs MAVs can cooperate together in a coordinated manner obeying a pre planned course but able to react to their environment by communicating and cooperating An optimized path is necessary in order to ensure a UAV completes its mission efficiently safely and successfully Focussing on the path planning of multiple UAVs for simultaneous arrival on target *Cooperative Path Planning of Unmanned Aerial Vehicles* also offers coverage of path planners that are applicable to land sea or space borne vehicles *Cooperative Path Planning of Unmanned Aerial Vehicles* is authored by leading researchers from Cranfield University and provides an authoritative resource for researchers academics and engineers working in the area of
